Package Contents

- DSL-2750B Wireless ADSL Router
- 2 non-detachable Antennas (MIMO 2x2)
- Power Adapter
- CD-ROM with Installation Wizard, User Manual, and Special Offers
- One twisted-pair telephone cable used for ADSL connection
- One straight-through Ethernet cable
- One Quick Installation Guide

Note: Using a power supply with a different voltage rating than the one included with the DSL-2750B will cause damage and void the warranty for this product.
1. ADSL Internet service
   Computer with:
   • 200MHz Processor
   • 64MB Memory
   • CD-ROM Drive
   • Ethernet Adapter with TCP/IP Protocol Installed
   • Windows win7/vista/XP/2000z
   • MAC OS
   • Internet Explorer v6 or later, FireFox v1.5

2. D-Link Click's Connect Utility
   Computer with:
   • Windows win7/vista/XP/2000
Introduction

HIGH-SPEED ADSL2/2+ INTERNET CONNECTION
Latest ADSL2/2+ standards provide Internet transmission of up to 24Mbps downstream, 1Mbps upstream.

HIGH-PERFORMANCE WIRELESS
Embedded 802.11n technology for high-speed wireless connection, complete compatibility with 802.11b/g wireless devices

TOTAL SECURITY
Firewall protection from Internet attacks, user access control, WPA/WPA2 wireless security.

ULTIMATE INTERNET CONNECTION
The DSL-2750B ADSL2+ router is a versatile, high-performance remote router for home and the small office. With integrated ADSL2/2+ supporting up to 24Mbps download speed, firewall protection, Quality of Service (QoS), 802.11n wireless LAN and 4 Ethernet switch ports, this router provides all the functions that a home or small office needs to establish a secure and high-speed remote link to the outside world.

ULTIMATE WIRELESS CONNECTION WITH MAXIMUM SECURITY
This router provides maximize wireless performance by connecting this router to computer interfaces and stay connected from virtually anywhere at home and in the office. The router can be used with 802.11b/g/n wireless networks to enable significantly improved reception. It supports WPA/WPA2 and WEP for flexible user access security and data encryption methods.

FIREWALL PROTECTION & QoS
Security features prevents unauthorized access to the home and office network, be it from the wireless devices or from the Internet. The router provides firewall security using Stateful Packet Inspection (SPI) and hacker attack logging for Denial of Service (DoS) attack protection. SPI inspects the contents of all incoming packet headers before deciding what packets are allowed to pass through. Router access control is provided with packet filtering based on port and source/destination MAC/IP addresses. For Quality of Service (QoS), the router supports multiple priority queues to enable a group of home or office users to experience the benefit of smooth network connection of inbound and outbound data without concern of traffic congestion. This QoS support allows users to enjoy high ADSL transmission for applications such as VoIP and streaming multimedia over the Internet.

*Maximum wireless signal rate derived from IEEE standard 802.11n specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental factors will adversely affect wireless signal range.
Features

- **Faster Wireless Networking** - The DSL-2750B provides up to 300Mbps* wireless connection with other 802.11n wireless clients. This capability allows users to participate in real-time activities online, such as video streaming, online gaming, and real-time audio.

- **Compatible with 802.11b and 802.11g Devices** - The DSL-2750B is still fully compatible with the IEEE 802.11b and g standards, so it can connect with existing 802.11b and g PCI, USB and Cardbus adapters.

- **DHCP Support** - Dynamic Host Configuration Protocol automatically and dynamically assigns all LAN IP settings to each host on your network. This eliminates the need to reconfigure every host whenever changes in network topology occur.

- **Network Address Translation (NAT)** - For small office environments, the DSL-2750B allows multiple users on the LAN to access the Internet concurrently through a single Internet account. This provides Internet access to everyone in the office for the price of a single user. NAT improves network security in effect by hiding the private network behind one global and visible IP address. NAT address mapping can also be used to link two IP domains via a LAN-to-LAN connection.

- **Precise ATM Traffic Shaping** - Traffic shaping is a method of controlling the flow rate of ATM data cells. This function helps to establish the Quality of Service for ATM data transfer.

- **High Performance** - Very high rates of data transfer are possible with the Router. Up to 24Mbps downstream bit rate using the G.dmt standard. (For ADSL2+)

- **Full Network Management** - The DSL-2750B incorporates SNMP (Simple Network Management Protocol) support for web-based management and text-based network management via Telnet connection.

- **Easy Installation** - The DSL-2750B uses a web-based graphical user interface program for convenient management access and easy set up. Any common web browser software can be used to manage the Router.

- **USB Support** - The DSL-2750B provides USB port for easy sharing files and printers. The DSL-2750B supports USB storage device sharing files through SAMBA file server, FTP server, Web file server and in addition also supports sharing USB printers to network members. Besides sharing function, the DSL-2750B also supports connect to internet by USB 3G modem.

- **IPv6 Connection Support** – For IPv6 connection, the DSL-2750B provide several connection type: Link-local, Static IPv6, DHCPv6, Stateless Autoconfiguration, PPPoE, IPv6 in IPv4 Tunnel and 6to4.

*Maximum wireless signal rate derived from IEEE standard 802.11n specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental factors will adversely affect wireless signal range.*
Hardware Overview

Connections

**ADSL port**
Use the ADSL cable to connect to your telephone line (RJ-11 port)

**USB port**
Use the USB port to connect your USB device.

**Wireless On/Off switch button**
Please press and hold on for 3 seconds to turn on/turn off.

**Reset button**
To manually reset, depress button with the power on for between ten and fifteen seconds.

**Ethernet ports**
Use the Ethernet ports to connect the Router to your Ethernet LAN or Ethernet devices.

**Power button**
Push in to power-on the Router. Push again to power-off the Router.

**Power insert**
Use the adapter shipped with the Router to connect to power source.
**Hardware Overview**

**LEDs**

- **Power**
  Steady green light indicates the unit is powered on. When the device is powered off this remains dark.

- **WLAN**
  Steady green light indicates a wireless connection. A blinking green light indicates activity on the WLAN.

- **DSL**
  Steady green light indicates a valid ADSL connection. This will light after the ADSL negotiation process has been settled. A blinking green light indicates activity on the WAN (ADSL) interface.

- **LAN**
  A solid green light indicates a valid link on startup. These lights blink when there is activity currently passing through the Ethernet port.

- **USB**
  Steady green light indicates a successful USB connection. Dark if no USB device is plugged.

- **Internet**
  Steady green light indicates a successful Internet connection. Steady red light indicates failed Internet connection. Dark if no WAN protocol is configured.
Installation

This section will walk you through the installation process. Placement of the router is very important. Do not place the router in an enclosed area such as a closet, cabinet, or in the attic or garage.

Before you Begin

Please read and make sure you understand all the prerequisites for proper installation of your new Router. Have all the necessary information and equipment on hand before beginning the installation.
Installation Notes

In order to establish a connection to the Internet it will be necessary to provide information to the Router that will be stored in its memory. For some users, only their account information (Username and Password) is required. For others, various parameters that control and define the Internet connection will be required. You can print out the two pages below and use the tables to list this information. This way you have a hard copy of all the information needed to setup the Router. If it is necessary to reconfigure the device, all the necessary information can be easily accessed. Be sure to keep this information safe and private.

Low Pass Filters
Since ADSL and telephone services share the same copper wiring to carry their respective signals, a filtering mechanism may be necessary to avoid mutual interference. A low pass filter device can be installed for each telephone that shares the line with the ADSL line. These filters are easy to install passive devices that connect to the ADSL device and/or telephone using standard telephone cable. Ask your service provider for more information about the use of low pass filters with your installation.

Operating Systems
The DSL-2750B uses an HTML-based web interface for setup and management. The web configuration manager may be accessed using any operating system capable of running web browser software, including Windows 98 SE, Windows ME, Windows 2000, and Windows XP.

Web Browser
Any common web browser can be used to configure the Router using the web configuration management software. The program is designed to work best with more recently released browsers such as Opera, Microsoft Internet Explorer® version 6.0, Netscape Navigator® version 6.2.3, or later versions. The web browser must have JavaScript enabled. JavaScript is enabled by default on many browsers. Make sure JavaScript has not been disabled by other software (such as virus protection or web user security packages) that may be running on your computer.

Ethernet Port (NIC Adapter)
Any computer that uses the Router must be able to connect to it through the Ethernet port on the Router. This connection is an Ethernet connection and therefore requires that your computer be equipped with an Ethernet port as well. Most notebook computers are now sold with an Ethernet port already installed. Likewise, most fully assembled desktop computers come with an Ethernet NIC adapter as standard equipment. If your computer does not have an Ethernet port, you must install an Ethernet NIC adapter before you can use the Router. If you must install an adapter, follow the installation instructions that come with the Ethernet NIC adapter.
802.11 Wireless LAN Configuration
All the 802.11 wireless LAN settings may be configured on a single page using the web-based manager. For basic wireless communication you need to decide what channel to use and what SSID to assign. These two settings must be the same for any wireless workstations or other wireless access point that communicate with the DSL-2750B through the wireless interface. Security for wireless communication can be accomplished in a number of ways. The DSL-2750B supports WPA (Wi-Fi Protected Access), WPA2, and mixed WPA/WPA2. Wireless access can also be controlled by selecting MAC addresses that are allowed to associate with the device. Please read the section on Wireless Configuration.

Additional Software
It may be necessary to install software on your computer that enables the computer to access the Internet. Additional software must be installed if you are using the device a simple bridge. For a bridged connection, the information needed to make and maintain the Internet connection is stored on another computer or gateway device, not in the Router itself. If your ADSL service is delivered through a PPPoE or PPPoA connection, the information needed to establish and maintain the Internet connection can be stored in the Router. In this case, it is not necessary to install software on your computer. It may however be necessary to change some settings in the device, including account information used to identify and verify the connection. All connections to the Internet require a unique global IP address. For bridged connections, the global IP settings must reside in a TCP/IP enabled device on the LAN side of the bridge, such as a PC, a server, a gateway device such as a router or similar firewall hardware. The IP address can be assigned in a number of ways. Your network service provider will give you instructions about any additional connection software or NIC configuration that may be required.
Information you will need from your ADSL service provider

**Username**
This is the Username used to log on to your ADSL service provider’s network. It is commonly in the form user@isp.co.uk. Your ADSL service provider uses this to identify your account.

**Password**
This is the Password used, in conjunction with the Username above, to log on to your ADSL service provider’s network. This is used to verify the identity of your account.

**WAN Setting / Connection Type**
These settings describe the method your ADSL service provider uses to transport data between the Internet and your computer. Most users will use the default settings. You may need to specify one of the following WAN Setting and Connection Type configurations (Connection Type settings listed in parenthesis):
- PPPoE/PPoA (PPPoE LLC, PPPoA LLC or PPPoA VC-Mux)
- Bridge Mode (1483 Bridged IP LLC or 1483 Bridged IP VC Mux)
- IPoA/MER (Static IP Address) (Bridged IP LLC, 1483 Bridged IP VC Mux, 1483 Routed IP LLC, 1483 Routed IP VC-Mux or IPoA)
- MER (Dynamic IP Address) (1483 Bridged IP LLC or 1483 Bridged IP VC-Mux)

**Modulation Type**
ADSL uses various standardized modulation techniques to transmit data over the allotted signal frequencies. Some users may need to change the type of modulation used for their service. The default DSL modulation (ADSL2+ Multi-Mode) used for the Router automatically detects all types of ADSL, ADSL2, and ADSL2+ modulation. However, if you are instructed to specify the modulation type used for the Router, you may choose among the numerous options available on the Modulation Type drop-down menu on the ADSL Configuration window (Advanced > ADSL).

**Security Protocol**
This is the method your ADSL service provider will use to verify your Username and Password when you log on to their network. Your Router supports the PAP and CHAP protocols.
VPI
Most users will not be required to change this setting. The Virtual Path Identifier (VPI) is used in conjunction with the Virtual Channel Identifier (VCI) to identify the data path between your ADSL service provider’s network and your computer. If you are setting up the Router for multiple virtual connections, you will need to configure the VPI and VCI as instructed by your ADSL service provider for the additional connections. This setting can be changed in the WAN Settings window of the web management interface.

VCI
Most users will not be required to change this setting. The Virtual Channel Identifier (VCI) used in conjunction with the VPI to identify the data path between your ADSL service provider’s network and your computer. If you are setting up the Router for multiple virtual connections, you will need to configure the VPI and VCI as instructed by your ADSL service provider for the additional connections. This setting can be changed in the WAN Settings window of the web management interface.
Information you will need about DSL-2750B

Username
This is the Username needed access the Router’s management interface. When you attempt to connect to the device through a web browser you will be prompted to enter this Username. The default Username for the Router is “admin.” The user cannot change this.

Password
This is the Password you will be prompted to enter when you access the Router’s management interface. The default Password is “admin.” The user may change this.

LAN IP addresses for the DSL-2750B
This is the IP address you will enter into the Address field of your web browser to access the Router’s configuration graphical user interface (GUI) using a web browser. The default IP address is 192.168.1.1. This may be changed to suit any IP address scheme the user desires. This address will be the base IP address used for DHCP service on the LAN when DHCP is enabled.

LAN Subnet Mask for the DSL-2750B
This is the subnet mask used by the DSL-2750B, and will be used throughout your LAN. The default subnet mask is 255.255.255.0. This can be changed later.
Information you will need about your LAN or computer:

**Ethernet NIC**
If your computer has an Ethernet NIC, you can connect the DSL-2750B to this Ethernet port using an Ethernet cable. You can also use the Ethernet ports on the DSL-2750B to connect to other computer or Ethernet devices.

**DHCP Client status**
Your DSL-2750B ADSL Router is configured, by default, to be a DHCP server. This means that it can assign an IP address, subnet mask, and a default gateway address to computers on your LAN. The default range of IP addresses the DSL-2750B will assign are from 192.168.1.2 to 192.168.1.254. Your computer (or computers) needs to be configured to Obtain an IP address automatically (that is, they need to be configured as DHCP clients.)

It is recommended that you collect and record this information here, or in some other secure place, in case you have to re-configure your ADSL connection in the future.

Once you have the above information, you are ready to setup and configure your DSL-2750B Wireless ADSL Router.
Wireless Installation Considerations

DSL-2750B lets you access your network using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind, however, that the number, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through, may limit the range. Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business. The key to maximizing wireless range is to follow these basic guidelines:

1. Keep the number of walls and ceilings between the D-Link router and other network devices to a minimum - each wall or ceiling can reduce your adapter’s range from 3-90 feet (1-30 meters.) Position your devices so that the number of walls or ceilings is minimized.

2. Be aware of the direct line between network devices. A wall that is 1.5 feet thick (.5 meters), at a 45-degree angle appears to be almost 3 feet (1 meter) thick. At a 2-degree angle it looks over 42 feet (14 meters) thick! Position devices so that the signal will travel straight through a wall or ceiling (instead of at an angle) for better reception.

3. Building Materials make a difference. A solid metal door or aluminum studs may have a negative effect on range. Try to position access points, wireless routers, and computers so that the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.

4. Keep your product away (at least 3-6 feet or 1-2 meters) from electrical devices or appliances that generate RF noise.

5. If you are using 2.4GHz cordless phones or X-10 (wireless products such as ceiling fans, lights, and home security systems), your wireless connection may degrade dramatically or drop completely. Make sure your 2.4GHz phone base is as far away from your wireless devices as possible. The base transmits a signal even if the phone in not in use.
Device Installation

The DSL-2750B Wireless ADSL Router maintains three separate interfaces, an Ethernet LAN, a wireless LAN and an ADSL Internet (WAN) connection. Carefully consider the Router’s location suitable for connectivity for your Ethernet and wireless devices. You must have a functioning broadband connection via a bridge device such as a Cable or ADSL modem in order to use the Router’s WAN function.

Place the Router in a location where it can be connected to the various devices as well as to a power source. The Router should not be located where it will be exposed to moisture, direct sunlight or excessive heat. Make sure the cables and power cord are placed safely out of the way so they do not create a tripping hazard. As with any electrical appliance, observe common sense safety procedures. The Router can be placed on a shelf, desktop, or other stable platform. If possible, you should be able to see the LED indicators on the front if you need to view them for troubleshooting.

Power on Router

The Router must be used with the power adapter included with the device.

1. Insert the AC Power Adapter cord into the power receptacle located on the rear panel of the Router and plug the adapter into a suitable nearby power source.
2. Push down the Power button, and you should see the Power LED indicator light up and remain lit.
3. If the Ethernet port is connected to a working device, check the Ethernet Link/Act LED indicators to make sure the connection is valid. The Router will attempt to establish the ADSL connection, if the ADSL line is connected and the Router is properly configured this should light up after several seconds. If this is the first time installing the device, some settings may need to be changed before the Router can establish a connection.
Factory Reset Button

The Router may be reset to the original factory default settings by using a ballpoint or paperclip to gently push down the reset button in the following sequence:

1. Press and hold the reset button while the device is powered off.
2. Turn on the power.
3. Wait for 10~15 seconds and then release the reset button.

Remember that this will wipe out any settings stored in flash memory including user account information and LAN IP settings. The device settings will be restored to the factory default IP address 192.168.1.1 and the subnet mask is 255.255.255.0, the default management Username is “admin” and the default Password is “admin.”

Network Connections

Connect ADSL Line
Use the ADSL cable included with the Router to connect it to a telephone wall socket or receptacle. Plug one end of the cable into the ADSL port (RJ-11 receptacle) on the rear panel of the Router and insert the other end into the RJ-11 wall socket. If you are using a low pass filter device, follow the instructions included with the device or given to you by your service provider. The ADSL connection represents the WAN interface, the connection to the Internet. It is the physical link to the service provider’s network backbone and ultimately to the Internet.

Connect Router to Ethernet
The Router may be connected to a single computer or Ethernet device through the 10BASE-TX Ethernet port on the rear panel. Any connection to an Ethernet concentrating device such as a switch or hub must operate at a speed of 10/100 Mbps only. When connecting the Router to any Ethernet device that is capable of operating at speeds higher than 10Mbps, be sure that the device has auto-negotiation (NWay) enabled for the connecting port. Use standard twisted-pair cable with RJ-45 connectors. The RJ-45 port on the Router is a crossed port (MDI-X). Follow standard Ethernet guidelines when deciding what type of cable to use to make this connection. When connecting the Router directly to a PC or server use a normal straight-through cable. You should use a crossed cable when connecting the Router to a normal (MDI-X) port on a switch or hub. Use a normal straight-through cable when connecting it to an uplink (MDI-II) port on a hub or switch. The rules governing Ethernet cable lengths apply to the LAN to Router connection. Be sure that the cable connecting the LAN to the Router does not exceed 100 meters.
**Hub or Switch to Router Connection**
Connect the Router to an uplink port (MDI-II) on an Ethernet hub or switch with a straight-through cable as shown in this diagram. If you wish to reserve the uplink port on the switch or hub for another device, connect to any on the other MDI-X ports (1x, 2x, etc.) with a crossed cable.

**Computer to Router Connection**
You can connect the Router directly to a 10/100BASE-TX Ethernet adapter card (NIC) installed on a PC using the Ethernet cable provided as shown in this diagram.
Configuration

This section will show you how to configure your new D-Link wireless router using the web-based configuration utility.

Web-based Configuration Utility

Connect to the Router
To configure the WAN connection used by the Router it is first necessary to communicate with the Router through its management interface, which is HTML-based and can be accessed using a web browser. The easiest way to make sure your computer has the correct IP settings is to configure it to use the DHCP server in the Router. The next section describes how to change the IP configuration for a computer running a Windows operating system to be a DHCP client.

To access the configuration utility, open a web-browser such as Internet Explorer and enter the IP address of the router (192.168.1.1).

Type “admin” for the User Name and “admin” in the Password field. If you get a Page Cannot be Displayed error, please refer to the Troubleshooting section for assistance.
This chapter is concerned with using your computer to configure the WAN connection. The following chapter describes the various windows used to configure and monitor the Router including how to change IP settings and DHCP server setup.

## INTERNET SETUP

To access the **INTERNET SETUP** (WAN) settings window, click on the **INTERNET Setup** button in the **SETUP** directory in this page:

### INTERFACE SETUP:

**ADSL INTERFACE**

Click on the **Setup** button if you want to configure ADSL Interface Configuration.

**ETH INTERFACE**

Click on the **Setup** button if you want to configure ETH Interface Configuration.

### ADSL SETUP

Check **Manual Setup** box to configuring Internet connection manually or you can click on **Setup Wizard** button to configuring router step-by-step.

### ETHERNET WAN INTERFACE

Assign one of the Ethernet ports as a WAN port to internet.
Section 3 - Configuration
MANUAL ADSL CONNECTION SETUP

Please select the connection type for your internet connection.

If your Internet service supported IPv6, you can click **Enable IPv6 for this service** to setup IPv6 in this connection

For **PPPoE/PPPoA INTERNET CONNECTION TYPE**:

Type in the **Username** and **Password** (and **PPPoE Service Name**, if required by your ISP).

Choose **PPPoE LLC/Snap-Bridging**, **PPPoE VC-mux**, **PPPoA LLC/encapsulation** and **PPPoA VC-mux** in drop-down menu.

You can use Static IPv4 Address check box and type **Static IP**.

Set **MTU** value which you want but should be less than 1492.

**PPP IP Extension**: Router passes the obtained IP address to the local PC and acts as a bridge only modem.

**DNS AND DEFAULT GATEWAY**

Select **Obtain DNS server address automatically** to get DNS from your ISP.

Or Select **Use the following DNS server addresses** to type the DNS IPs in the **Preferred DNS server** and **Alternate DNS server**.
IPv6 DNS AND DEFAULT GATEWAY

Select **Obtain IPv6 DNS server address automatically** to get DNS from your ISP.

Or Select **Use the following IPv6 DNS server addresses** to type the DNS IPs in the Preferred DNS server and Alternate DNS server.

Select **Default IPv6 Gateway Interface** in drop-down menu

Set **VPI/VCI**, enable the **Enable NAT**

Enable the **Enable Firewall** when you want to have the basic filter function, for example, ICMP ping to DSL-2750B.

Enable the **Enable IGMP Multicast Proxy** to send IGMP query packets to the IPTV clients.

**Enable VLAN** and type the **VLAN ID (0-4095)** which your ISP assigns.

Click on the **Apply** button to apply setting.
Section 3 - Configuration

For DYNAMIC IP ADDRESS INTERNET CONNECTION TYPE:

Type **Host Name** and select **Connection Type** in drop-down menu.

**DNS AND DEFAULT GATEWAY**

Select **Obtain DNS server address automatically** to get DNS from your ISP.

Or select **Use the following DNS server addresses** to type the DNS IP in the **Preferred DNS server** and **Alternate DNS server**.

**IPv6 DNS AND DEFAULT GATEWAY**

Select **Obtain IPv6 DNS server address automatically** to get DNS from your ISP.

Or select **Use the following IPv6 DNS server addresses** to type the DNS IPs in the **Preferred DNS server** and **Alternate DNS server**.

Select **Default IPv6 Gateway Interface** in drop-down menu.

Set VPI/VCI, enable the **Enable NAT**.

Enable the **Enable Firewall** when you want to have the basic filter function, for example, ICMP ping to DSL-2750B.

Enable the **Enable IGMP Multicast Proxy** to send IGMP query packets to the IPTV clients.

**Enable VLAN** and type the **VLAN ID (0-4095)** which your ISP assigns.

Click on the **Apply** button to apply setting.
Section 3 - Configuration

For STATIC IP ADDRESS INTERNET CONNECTION TYPE

Type IP Address, Subnet Mask, Default Gateway, and select Connection in drop-down menu.

These information should be provided from your Internet Service Provider (ISP)

STATIC IPv6 ADDRESS INTERNET CONNECTION TYPE

Type WAN IPv6 Address/Prefix Length and WAN Next-Hop IPv6 Address

These information should be provided from your Internet Service Provider (ISP)

DNS AND DEFAULT GATEWAY

Select Obtain DNS server address automatically to get DNS from your ISP.

Or Select Use the following DNS server addresses to type the DNS IP in the Preferred DNS server and Alternate DNS server.
Section 3 - Configuration

IPv6 DNS AND DEFAULT GATEWAY

Select **Obtain IPv6 DNS server address automatically** to get DNS from your ISP.

Or Select **Use the following IPv6 DNS server addresses** to type the DNS IPs in the Preferred DNS server and Alternate DNS server.

Select **Default IPv6 Gateway Interface** in drop-down menu.

Set VPI/VCI, enable the **Enable NAT**.

Enable the **Enable Firewall** when you want to have the basic filter function, for example, ICMP ping to DSL-2750B.

Enable the **Enable IGMP Multicast Proxy** to send IGMP query packets to the IPTV clients.

**Enable VLAN** and type the **VLAN ID (0-4095)** which your ISP assigns.

Click on the **Apply** button to apply setting.

**For BRIDGE CONNECTION TYPE**

Select **Service Category**, **Encapsulation Mode** in drop-down menu.

Check **Enable Bridge Service** box and type **Service Name**.

Set VPI/VCI,

**Enable VLAN** and type the **VLAN ID (0-4095)** which your ISP assigns.

Click on the **Apply** button to apply setting.
Section 3 - Configuration

ETHNET WAN SETUP

ETHNET WAN PORT SELECTION

Select a Ethernet port to be the WAN port in drop-down menu

MANUAL ETH WAN CONNECTION SETUP

This section setup as pre MANUAL ADSL CONNECTION SETUP section

<table>

WIRELESS SETUP

Use this section to configure the wireless settings for your D-Link router. Please note that changes made in this section will also need to be duplicated onto your wireless clients and PC.

To access the WIRELESS (WLAN) settings window, click on the Wireless Setup button in the SETUP tab.

Wireless Network Setting

Click on the Wireless Connection Setup Wizard button to setup the wireless connection in an easy way. It will use Web-based Wizard to assist you in connecting to your new D-Link Systems Wireless Router.

Note: Before launching the wizard, please make sure you have followed all steps outlined in the Quick Installation Guide included in the package.

Click on the Add Wireless Device with WPS button. This wizard is designed to assist you in connecting your wireless device to your router with WPS. It will guide you through step-by-step instructions on how to get your wireless device connected.

If you would like to configure the Internet settings of your new D-Link Router manually, then click on the Manual Wireless Connection Setup button.
Welcome to the D-Link Wireless Security Setup Wizard

Enable Your Wireless Network  Your wireless network is enabled by default. You can simply uncheck the below checkbox to disable wireless.

Network Name (SSID) identifies members of the Service Set. Accept the default name or change it to something else. If the default SSID is changed, all other devices on the wireless network must also use the same SSID.

Manually assign a network key  You can also set it manually if you do not prefer the key we generate. Type a string (8-63 characters, such as a~z, A~Z, or 0~9,) on the Pre-Shared key.

Click Next button to go to the next page.
Click Cancel button to return to the main menu of Wireless Setup page.

Check your wireless network setting.
Click Save button to apply your setting.
Click Prev button to pre-page to modify your setting.
Click Cancel button to cancel your setting.
Section 3 - Configuration

Add Wireless Device with WPS

The wizard shows the option to setup WPS by Auto or Manual.
Auto -- Select this option if your wireless device supports WPS (Wi-Fi Protected Setup)
Manual -- Select this option to display the current wireless settings for you to configure the wireless device manually.

Click Next button to go to the next page.
Click Cancel button to return to the main menu of Wireless Setup page.

Add Wireless Device with WPS (Automatically)
This page allows you to select PIN or PBC to use WPS method.

PIN -- Enter the PIN code from your wireless device and click the below Connect button to start the handshaking.

PBC-- Please press the Connect button and hold on for 3 seconds on your wireless device and presses the Connect button below within 120 seconds to start the handshaking.

Click Prev to go back to previous page.
Add Wireless Device with WPS (Manually)
This screen shows the information for the SSID, Wireless Security Mode and the Network key and allow you to modify the current setting, if you select Auto in the previous page, you won’t see this page and please refer to next column.

Please type network name on the Network Name SSID.

Please type network key on the Network Key

Click OK button to process the next page.

Add Wireless Device with WPS (WI-FI PROTECTED SETUP)

Finally it will show all the configurations. You can check if it is exact, please click the Next button.
Manual WIRELESS Connection Setup SETTINGS
Click on the Enable Wireless box to allow the router to operate in the wireless environment. You can use the Add New button to set the schedule.

The SSID identifies members of the Service Set. Accept the default name or change it to something else. If the default SSID is changed, all other devices on the wireless network must also use the same SSID.

Enable Auto Channel Scan so that the router can select the best possible channel for your wireless network to operate on.

The Wireless Channel can let you select the channel of your access point. Channel availability is different for different countries due to their regulation.

Select 802.11 Mode to operate in b/g/n mode. Or select specified mode to use. 802.11b only, 802.11g only, 802.11n only.

Mixed 802.11g and 802.11b which means DSL-2750B will detect the clients to use 802.11g or 802.11b to synchronize.
Mixed 802.11n, 802.11g and 802.11b which means DSL-2750B will detect the clients to use 802.11n, 802.11g or 802.11b to synchronize.

**Channel Width**, Choose 20MHz or Auto 20/40MHz to decide the Transmission Rate.

**Transmission Rate**, suggest keeping the Best (automatic) selection. This is related to Receive Sensitivity as follows,

If you only use the Transmission rate of the 20MHz, please refer to the right picture.
If you want to use the max. rate 150Mbps or the max. rate 300Mbps on 40MHz, please choose the **Channel Width**: Auto 20/40MHz

Choose Visible or Invisible to decide if you want to show its SSID.
Section 3 - Configuration

WIRELESS SECURITY Mode

To protect your privacy you can configure wireless security features. This device supports three wireless security modes including: WEP, WPA, WPA2, Auto(WPA or WPA2). WEP is the original wireless encryption standard. WPA provides a higher level of security. WPA-Personal does not require an authentication server. The WPA-Enterprise option requires an external RADIUS server.

WIRELESS SECURITY MODE – WEP

WEP (Wireless Encryption Protocol) encryption can be enabled for security and privacy. WEP encrypts the data portion of each frame transmitted from the wireless adapter using one of the predefined keys. The router offers 64 or 128 bit encryption with four keys available.

Select WEP Key Length from the drop-down menu. (128 bit is stronger than 64 bit)

Specify the encryption key from the Current Network Key drop-down menu.

Enter the key into the WEP Key field 1~4. (Key length is outlined at the bottom of the window.)

Select Authentication type from the drop-down menu. (Shared is better than Open)

Click on the Apply Settings button to apply settings.
Use **WPA** or **WPA2** mode to achieve a balance of strong security and best compatibility. This mode uses WPA for legacy clients while maintaining higher security with stations that are WPA2 capable. Also the strongest cipher that the client supports will be used. For best security, use **WPA2** mode. This mode uses AES (CCMP) cipher and legacy stations are not allowed access with WPA security. For maximum compatibility, use **WPA**. This mode uses TKIP cipher. Some gaming and legacy devices work only in this mode.

Choose **WPA / WPA2 / Auto(WPA or WPA2)** on the **WPA Mode**

Type the value seconds on the **Group Key Update Interval**. The default value is 1800.

**WPA / WPA2 -PSK (Personal)**

Type the string on the **Pre-Shared Key**

Click the **Apply Settings** button to save the configuration.
Section 3 - Configuration

WPA / WPA2 (Enterprise)

Some network-security experts now recommend that wireless networks use 802.1X security measures to overcome some weaknesses in standard WEP applications. A RADIUS server is used to authenticate all potential users.

Enter your RADIUS server data: IP Address, Port, and Key.

Click on the **Apply Settings** button to apply settings.
LAN SETUP

You can configure the LAN IP address to suit your preference. Many users will find it convenient to use the default settings together with DHCP service to manage the IP settings for their private network. The IP address of the Router is the base address used for DHCP. In order to use the Router for DHCP on your LAN, the IP address pool used for DHCP must be compatible with the IP address of the Router. The IP addresses available in the DHCP IP address pool will change automatically if you change the IP address of the Router.

To access the Local Network setting window, click on the Local Network button in the SETUP tab.

ROUTER SETTINGS

To change the Router IP Address or Subnet Mask, type in the desired values.

DHCP SERVER SETTINGS (OPTIONAL)

The Enable DHCP Server is selected by default for the Router’s Ethernet LAN interface.

Set the DHCP IP Address Range and the default is from 192.168.1.2 to 192.168.1.254. The IP address pool can be up to 253 IP addresses.

Set the value hours on the DHCP Lease Time

If you don’t want DSL-2750B to be the DHCP server, you can enable DHCP relay to pass the DHCP discover packets of the clients to another DHCP server.

Please set the DHCP server IP address on the DHCP Server IP Address
Section 3 - Configuration

ADD/EDIT DHCP RESERVATION (OPTIONAL)
Select the Enable to let you reserve the IP Address for the designated PC with the configured MAC Address.

The Computer Name can help you recognize the PC with the MAC Address, such as “Father’s Laptop”.

Clicking on the Copy Your PC’s MAC Address button to help you get the Mac address from the PC you are using now browsing this web page.

Click on the Save button to save the settings

DHCP RESERVATIONS LIST
After saved the DHCP reservation, the DHCP RESERVATIONS LIST will list the configuration.

The NUMBER OF DYNAMIC DHCP CLIENTS shows how many DHCP clients (PC or Laptop) connected to the router currently.

Click on the Save Settings button.

You will be asked to reboot by a pop-up window. Click on the OK to reboot the router.

LAN SETUP
Do not turn the Router off while it is rebooting.

You might need to re-configure your PC NIC settings to enter the Router’s web manager after reboot.
Section 3 - Configuration

TIME AND DATE

The Time and Date configuration option allows you to configure, update, and maintain the correct time on the internal system clock. From this section you can set the time zone that you are in and set the NTP (Network Time Protocol) Server. Daylight Saving can also be configured to automatically adjust the time when needed.

To access the Time setting window, click on the Time and Date button in the SETUP tab

**TIME SETTING:**
Check the Automatically synchronize with Internet time servers

Select specific time server to use from the First NTP time server and Second NTP time server specific NTP server name.

**TIME CONFIGURATION:**

Select your operating time zone from the Time Zone drop-down menu.

If you need to use the daylight saving, just choose the Enable Daylight Saving. Daylight saving is a period from late Spring to early Fall.

Set how many hours to change the time for Daylight saving Offset.

Configure Daylight Saving Dates,
Daylight Saving time starts in the most parts of the United States on the second Sunday of March. Each time zone in the United States starts Daylight Saving time at 2 A.M. Thus, in the United States you must use March, Second, Sunday, at 2:00 A.M.

Daylight Saving time starts in the European Union on the last Sunday of March. Thus, in European Union, you must select March, Last, Sunday.
Section 3 - Configuration

The time must depend on your country’s time zone. For example, in Germany you must type 2 because Germany’s time zone is 1 hour ahead of GMT or UTC (GMT+1). Thus, in Germany you must use March, Last, Sunday, at 1:00 A.M.

Daylight Saving time ends in the most parts of the United States on the First Sunday of November. Each time zone in the United States must use Daylight Saving time at 2:00 A.M. Thus, in the United States you must set November, First, Sunday, at 2:00 A.M.

Daylight Saving time ends in the European Union on the Last Sunday of October. For instance, in Germany you must type 2 because Germany’s time zone is 1 hour ahead of GMT (GMT+1). Thus, in Germany you must use March, Last, Sunday, at 1:00 A.M.

SET THE DATE AND TIME MANUALLY

You can also use the Copy Your Computer’s Time Settings to synchronize the Date and Time to your local PC. Or, you also can adjust Year/Month/Day/Hour/Minute/Second manually.

Please click the Apply button to save the configuration.
PARENTAL CONTROL

Parental Control provides two useful tools for restricting Internet access. Block Websites allows you to quickly create a list of all web sites that you wish to stop users from accessing. Time Restrictions allows you to control when clients connected to Router are allowed to access the Internet.

To access PARENTAL CONTROL setting windows, click on the PARENTAL CONTROL button in the SETUP tab.

BLOCK WEBSITES SCHEDULING

Type the Website URL which you want to block.

Blocked All Week or Select Days.

Blocked All DAY-24hrs or setup Start Time to End Time.

Click on the Block Website button to add web site block rule.

INTERNET ACCESS TIME RESTRICTIONS

Check the Start Time to End Time and days for Internet Access Restriction Allow or Deny.
IPv6

The IPv6 configuration option allows you configure IPv6 internet connection. You can configure follow IPv6 Internet Connection Setup Wizard utilize or Manually IPv6 Internet Connection Setup.

To access the IPv6 setting window, click on the IPv6 button in the SETUP tab.

Manual IPv6 Internet Connection Setup
Use this section to configure your IPv6 Connection type. If you are unsure of your connection method, please contact your Internet Service Provider.

IPv6 INTERFACE
Choose the IPv6 Interface in the drop-down menu.

IPv6 CONNECTION TYPE
Choose the IPv6 internet connection type in the drop-down menu:
- Link-local only
- Static IPv6
- Autoconfiguration (SLAAC/DHCPv6)
- PPPoE
- DS-Lite.

Connection type: Link-local only

LAN IPv6 ADDRESS SETTING
Link-local only is communication with in internal network. The LAN IPv6 Link-local Address is used default setting.
Section 3 - Configuration

Connection type: Static IPv6

WAN IPv6 ADDRESS SETTINGS

You can check Use Link-Local Address box to Link-local only, or type the WAN IPv6 Address and Subnet Prefix Length.

Type Default Gateway, Primary IPv6 DNS server and Secondary IPv6 DNS server.

These information provided by your Internet Service Provider (ISP)

LAN IPv6 ADDRESS SETTINGS

Configure the internal network settings of your router. You can change the LAN IPv6 Address.

ADDRESS AUTOCONFIGURATION SETTINGS

SLAAC+Stateless DHCP to set computers on Router network obtained IPv6 address by stateless DHCP.

SLAAC+RDNSS to set computers on Router network obtained IPv6 address by RDNSS

Stateful DHCP to set computers on Router network obtained IPv6 address by Stateful DHCP, you need type the IPv6 Address Range (Start and End)
Section 3 - Configuration

Connection type: Autoconfiguration (SLAAC/DHCPv6)

IPv6 DNS SETTING

Choose Obtain IPv6 DNS servers automatically or type Primary IPv6 DNS server and Secondary IPv6 DNS server.

LAN IPv6 ADDRESS SETTINGS

Enable DHCP-PD to used Prefix Delegation assigned IPv6 Prefix. Or you can change the LAN IPv6 Address.

ADDRESS AUTOCONFIGURATION SETTINGS

SLAAC+Stateless DHCP to set computers on Router network obtained IPv6 address by stateless DHCP.

SLAAC+RDNSS to set computers on Router network obtained IPv6 address by RDNSS

Stateful DHCP to set computers on Router network obtained IPv6 address by Stateful DHCP, you need type the IPv6 Address Range (Start and End)
Section 3 - Configuration

Connection type: PPPoE

PPPoE session set Share with IPv4

At Address Mode if you choose Dynamic IP, router will obtained WAN IPv6 address by Dynamically or you can set static IPv6 address in Static IP Address/Prefix Length to router.

Type User Name, Password, Verify Password, Service Name (if necessarily),

Reconnect Mode set to Always on, set MTU value which you want but should be less than 1492 on the MTU

These information provided by your Internet Service Provider (ISP)

IPv6 DNS SETTING

Choose Obtain IPv6 DNS servers automatically or type Primary IPv6 DNS server and Secondary IPv6 DNS server.

LAN IPv6 ADDRESS SETTINGS

Enable DHCP-PD to use Prefix Delegation assigned IPv6 Prefix. Or you can change the LAN IPv6 Address.

ADDRESS AUTOCONFIGURATION SETTINGS

SLAAC+Stateless DHCP to set computers on Router network obtained IPv6 address by stateless DHCP.
Section 3 - Configuration

SLAAC+RDNSS to set computers on Router network obtained IPv6 address by RDNSS

Stateful DHCP to set computers on Router network obtained IPv6 address by Stateful DHCP, you need type the IPv6 Address Range (Start and End)

Connection type: DS-Lite

Choose DS-Lite DHCPv6 Option, If you choose Manual Configuration, need type the AFTR IPv6 Address.

Type B4 IPv4 Address (if necessarily)

Type WAN IPv6 Address and IPv6 WAN Default Gateway.
USB SETUP

To configure the USB Device on the router, click USB Setup in the SETUP tab. Router can configure as a USB device server when you plug-in a USB Storage device. Router can configure as a USB Printer server when you plug-in a USB Printer device. Router can connect to Internet via 3G when you plug-in a 3G USB Modem.

To access the USB SETUP setting window, click on the USB SETUP button in the SETUP tab.

Print Server: allows you to share your USB printer to all the connected local hosts.

First connect your printer to the USB port. Then enter the data below. Last, configure your local hosts (Add Printer Wizard) to utilize this printer.

To configure USB port to Print Server setting, choose Enable SharePort and Print Server in the USB Setup page and press Apply button.

And you also can share the USB printer or USB storage device to all connect local hosts by SharePort Utility.

SharePort Utility manual shows in Appendix–G D-Link SharePort™

To setup Printer Server, press setup button in USB SETUP window enter the server configuration page.
Section 3 - Configuration

Hook the **Enable on-board print server** to enable the on-board printer server

Type the **Printer name** of the printer which must be exactly the same as configured in the local hosts while setting up a network printer.

Type an number from 1 to 128 in **Make an Model**

Press **Apply** button to apply configuration.

Add a new Printer on your PC

**Note:** Not every printer is supported. Please check your local vendor for more information.
USB Storage Server allows you to share your USB storage device to all the connected local hosts.

First connect your USB Storage device to the USB port. Then enter the data below.

To configure USB port to USB Storage server setting, choose Enable USB Storage Server in the USB Setup page and press Apply button.

To setup USB Storage Server, press Setup button in STORAGE SETUP window enter the server configuration page.

USB DEVICE STATUS can check the USB Device Status and press Status Refresh button to refresh the status. Press Safely Remove Device button to safely remove device.

SAMBA FILE SERVER

Enable SAMBA FILE SERVER to configure USB Storage Device as a SAMBA File server.

Setup the Server Name, Server Description and Group Name of file server.

You can remote access when the Remote Access was hooked.
You can check **Add**, **Edit** and **Delete** the user in the **SAMBA FILE SERVER USER PROFILE**.

**FTP FILE SERVER**

Enable **FTP SERVER** to config USB Storage Device as a FTP file server.

Setup the **Port Name**, **Maxmun connection**, and **Idle timeout** of FTP file server.

You can remote access when the **Remote Access** was hooked.

You can check **Add**, **Edit** and **Delete** the user in the **FTP SERVER USER PROFILE**.

**WEB FILE SERVER**

Enable **WEB SERVER** to config USB Storage Device as a WEB file server.

Click the Browse to choose a folder for **Path**, and type **Port Number** of WEB file server.

You can remote access when the **Remote Access** was hooked.
Section 3 - Configuration

3G USB MODEM SETUP

Click Setup button in 3G USB MODEM SETUP window to configure 3G USB MODEM

Enable the Enable 3G USB Modem
Type the PIN Code, Telephone Number, and APN, which provide by your 3G ISP.
ADVANCED

This chapter includes the more advanced features used for network management and security as well as administrative tools to manage the router, view status and other information used to examine performance and for troubleshooting.

PORT FORWARDING

Use the PORT FORWARDING window to open ports in your router and re-direct data through those ports to a single PC on your network (WAN-to-LAN traffic). The Port Forwarding function allows remote users to access services on your LAN such as FTP for file transfers or SMTP and POP3 for e-mail. The DSL-2750B will accept remote requests for these services at your Global IP Address, using the specified TCP or UDP protocol and port number, and then redirect these requests to the server on your LAN with the LAN IP address you specify. Remember that the specified Private IP Address must be within the useable range of the subnet occupied by the Router.

To access the PORT FORWARDING settings window, click on the PORT FORWARDING button in the ADVANCED tab.
PORT FORWARDING RULES CONFIGURATION

Select a name from the **Application Name** drop-down menu for a pre-configured application or type a name in the **Name** input box to define your own application.

Select a name from the **Computer Name** drop-down menu or type an IP address in the **IP address** input box to appoint the PC to receive the forwarded packets.

The **External Port** shows the ports opened for remote users in the WAN side of the router. The **TCP/UDP** means the protocol type of the opened ports.

The **Internal Port** shows the ports opened in the PC with the appointed IP Address. The **TCP/UDP** means the protocol type of the opened ports.
APPLICATION RULES CONFIGURATION

Some applications such as games, video conferencing, remote access applications and others require that specific ports in the Router's firewall be opened for access by the applications.

To access APPLICATION RULES setting windows, click on the APPLICATION RULES button in the ADVANCED tab.

APPLICATION RULES

Select a name from the Application Name drop-down menu for a pre-configured application or type a name in the Name input box to define your own application.

It will appear the Trigger and Firewall ports after you choose the application name by the drop-down menu.

Choose the Use Interface and click the Add/Apply button to save the configuration, and then it will be added in the list.
QOS SETUP

Quality of Service Setup can be used to improve data flow for different applications by prioritizing the network traffic based on selected criteria.

To access the QOS SETUP settings window, click on the QOS SETUP button in the ADVANCED tab.

QOS SETUP

You have to define the service ports. For example,

VoIP(RTP) is from 700(Start Port) to 900(End Port)
H.323 is 1720
FTP is from 20(Start Port) to 21(End Port)
MSN massager is from 1863(Start Port) to 1864(End Port)

WIRELESS QOS SETUP

You can choose Enable or Disable to decide if the data has the WMM on the WMM(Wi-Fi Multimedia)

WMM No Acknowledge means that the receiver doesn’t have to send back the Acknowledge packet.

ADVANCED QoS Setup

Click the Wireless QoS button to set wireless data priority.
Click the LAN QoS button to set Ethernet data priority.
Section 3 - Configuration

WIRELESS QOS RULES CONFIGURATION

Type the policy name on the **Name**, set the priority value on the **Priority**.

Select the **Protocol**, ANY, ICMP, TCP and UDP.

Set the **Source IP Range** and the **Destination IP Range**.

Set the **Source Port Range** and the **Destination Port Range**.

Click the **Add/Apply** button to add the policy to the list.

LAN QOS RULES CONFIGURATION

Type the policy name on the **Name**, set the priority value on the **Priority**.

Select the **Protocol**, ANY, ICMP, TCP and UDP.

Set the **Source IP Range** and the **Destination IP Range**.

Set the **Source Port Range** and the **Destination Port Range**.

Click the **Add/Apply** button to add the policy to the list.
OUTBOUND FILTER

By default, all outgoing IP traffic from the LAN is allowed. The Outbound Filter allows you to create a filter rule to block outgoing IP traffic by specifying a filter name and at least one condition below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect.

To access the OUTBOUND FILTER settings window, click on the OUTBOUND FILTER button in the ADVANCED tab

ADD OUTBOUND IP FILTER

Type the filter name on the Filter Name.

Choose ICMP, TCP/UDP, TCP or UDP on the Protocol.

Type Source IP address, Source Subnet Mask and Source Port(port or port::port means from which port to which port)

Type Destination IP address, Destination Subnet Mask and Destination Port(port or port::port means from which port to which port)

Set the policy schedule on the Schedule, Always or never, or View Available Schedules

Please click Add/Apply button to add the policy in the list.
INBOUND FILTER

By default, all incoming IP traffic from the internet network is allowed. The Inbound Filter allows you to create a filter rule to filter incoming IP traffic by specifying a filter name and at least one condition below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect.

To access the INBOUND FILTER settings window, click on the INBOUND FILTER button in the ADVANCED tab.

ADD OUTBOUND IP FILTER

Type the filter name on the Filter Name.

Choose ICMP, TCP/UDP, TCP or UDP on the Protocol.

Type Source IP address, Source Subnet Mask and Source Port(port or port::port) means from which port to which port.

Type Destination IP address, Destination Subnet Mask and Destination Port(port or port::port) means from which port to which port.

Set the policy schedule on the Schedule, Always or never, or View Available Schedules.

Please click Add/Apply button to add the policy in the list.
WIRELESS FILTER

This feature can let you add a policy to deny or allow WLAN devices connected to the router.

To access the WIRELESS FILTER settings window, click on the WIRELESS FILTER button in the ADVANCED tab.

WIRELESS FILTER POLICY

You can choose the Disable/ Allow All/ Deny All of Wireless Filter Policy. Disable: You don’t want to launch the feature.

Allow All: Support Wlan devices make connection, except the mac address which is added in the filter table.

Deny All: Support deny all Wlan devices make connection, except the mac address which is added in the filter table.

WIRELESS FILTER

Type filter name on the FILTER NAME
Type wireless mac address on the Wireless MAC Address

WIRELESS FILTER - MAXIMUM 32 ENTRIES CAN BE ADDED.

Please click the Add/Apply button to add the policy in the list.
DNS SETUP

The DNS is used to resolve the DNS name to IPs. You can type or get automatically.

The Dynamic DNS feature allows you to host a server (Web, FTP, Game Server, etc...) using a domain name that you have purchased (for example: www.whateveryournameis.com) with your dynamically assigned IP address. Most broadband Internet Service Providers assign dynamic (changing) IP addresses. Using a DDNS service provider, your friends can enter your host name to connect to your game server and your friends don’t mind what your IP address is, and then just type the DDNS name to reach. You can use the D_Link DDNS server, https://www.dlinkddns.com to have a free DDNS.

To access the DNS setting window, click on the DNS button under the ADVANCED tab.

DNS SERVER CONFIGURATION

If you are using the Router for DHCP service on the LAN and are using DNS servers on the ISP’s network, check Obtain DNS server address automatically box.

If you have DNS IP addresses provided by your ISP, enter these IP addresses in the available entry fields for the Primary DNS Server and the Secondary DNS Server.

If IPv6 Internet connection service was enabled, you can check obtain IPv6 DNS server address automatically box. Or you can enter Primary IPv6 DNS Server and the Secondary IPv6 DNS Server.
Section 3 - Configuration

DDNS CONFIGURATION

Please enable the **Enable Dynamic DNS** if you want to use DDNS.

Choose which DDNS web site to use on the **Server Address**.

Type which Host name which you registered with your DDNS service provider on the **Host Name**.

Please choose which interface name to use on the **Interface**.

Type the username/password on the **username/password** for your DDNS account.

After configure the DNS settings as desired, click on the **Apply Setting** button to apply settings.
FIREWALL & DMZ

The router already provides a simple firewall by virtue of the way NAT works. By default, NAT does not respond to unsolicited incoming requests on any port, thereby making your WAN invisible to Internet cyber attackers.

DMZ means 'Demilitarised Zone'. DMZ allows computers behind the router firewall to be accessible to Internet traffic. Typically, your DMZ would contain Web servers, FTP servers, and others.

To access the Firewall & DMZ setting window, click on the Firewall & DMZ button under the ADVANCED tab.

Firewall SETTING

Check the Enable SPI box.

Check the Enable DOS and Portscan Protection box, you can choose the below attack firewall setting:
- SYN attack,
- FIN/URG/PSH attack,
- Ping attack,
- Xmas Tree attack,
- TCP reset attack,
- Null scanning attack,
- Ping of Death attack,
- SYN/RST SYN/FIN attack.

Section 3 - Configuration

DMZ Setting

Please enable the **Enable DMZ** and type the DMZ client IP on the **DMZ IP Address**.

Or you also can choose the DMZ host by the drop-down menu.

Application Level Gateway (ALG) Configuration

Please choose the following ALG to enable:

- **PPTP**
- **IPSec (VPN Passthrough)**
- **RTSP (Online Video Streaming)**
- **Windows/MSN Messenger**
- **FTP**
- **H.323 (Video Conferencing)**
- **SIP**
- **Wake-On-LAN**
- **MMS**
ADVANCED INTERNET

The Multiple PVC Settings allow you to Add, Delete or Edit multiple PVCs connection for advanced ADSL service. The Advanced ADSL settings allow you to choose which ADSL modulation settings your modem router will support. D-Link do not recommend that you change these settings unless directed to do so by your ISP.

To access the ADVANCED INTERNET setting window, click on the ADVANCED INTERNET button under the ADVANCED tab.

Multiple PVC Settings

Please click the Add / delete button to add / delete the multiple PVC. And the following step same as pre internet setup.

Advanced ADSL Settings

Please select following ADSL profile to link. G.Dmt, G.lite, T1.413, ADSL2, AnnexL, ADSL2+, Annex M

Please choose the Inner pair or Outer pair on the Select the phone line pair below.

Please select to enable Bitswap and SRA on the Capability.
These options are for users that wish to change the behavior of their wireless radio from the standard setting. D-Link does not recommend changing these settings from the factory default. Incorrect settings may impair the performance of your wireless radio. The default settings should provide the best wireless radio performance in most environments.

To access the Advanced Wireless setting window, click on the Advanced Wireless button in the ADVANCED tab.

Advanced WIRELESS Settings

If you need to change the default behavior,

Please type the value on the Fragmentation Threshold
Please type the value on the RTS Threshold
Please type the value on the DTIM Interval
Please type the value on the Beacom Interval
Please choose 20%, 40%, 60%, 80% and 100% on the Transmit Power.

GUEST WIRELESS SETTING

Please enable the Enable Wireless Guest Network
Type SSID on the Wireless Network Name
Please choose Visible or Invisible on the Visibility Status
Please select Off/On on the AP Isolation.
ADVANCED LAN

These options are for users that wish to change the LAN settings. D-Link does not recommend changing these settings from factory default. Changing these settings may affect the behavior of your network.

To access the Advanced LAN setting window, click on the Advanced LAN button in the ADVANCED tab.

UPnP

Please select the Enable UPnP when you want to have Universal Plug and Play (UPnP) supports peer-to-peer Plug and Play functionality for network devices.

Block ICMP Ping

Enable the WAN Ping Respond on the Enable WAN Ping Respond. Please select Allow All or Deny All on the WAN Ping Inbound Filter and you can also type a string on the Details to describe the action.

Multicast Streams

Please enable the Enable Multicast Streams (IGMP) to let IGMP stream can pass through DSL-2750B.
PORT MAPPING

Port Mapping supports multiple ports to PVC and bridging groups. Each group will perform as an independent network. To support this feature, you must create mapping groups with appropriate LAN and WAN interfaces using the Add button. The Remove button will remove the grouping and add the ungrouped interfaces to the Default group if Remove is checked. Only the default group has IP interface.

To access the Port Mapping setting window, click on the Port Mapping button in the Advanced tab.

PORT MAPPING

Click Add button to add Port Mapping rule.
Section 3 - Configuration

PORT MAPPING CONFIGURATION

Type **Group Name** and select **WAN Interface used in the grouping** in drop-down menu.

Choose **Grouped LAN Interface** from **Available LAN Interfaces**.

Type DHCP vendor IDs in the **Automatically Add Clients With the following DHCP Vendor IDs** for auto add clients.

Click on the **Apply** Button to save the setting.
SNMP SETUP

Simple Network Management Protocol (SNMP) allows a management application to retrieve statistics and status from the SNMP agent in this device. Select the desired values and click "Apply" to configure the SNMP options.

To access the SNMP SETUP setting window, click on the SNMP SETUP button in the ADVANCED tab.

**snmp configuration**

Please **Enable the SNMP Agent**

Please type the **Read Community**, **Set Community** to match to the SNMP requirier.

Please type **System Name**, **System Location** and **System Contact** to describe the DSL-2750B’s related information.

Please type the trap IP on the **Trap Manager IP**

Please click the **Apply** button to save the setting.
REMOTE MANAGEMENT

This section allows you to enable/disable remote access to the router from the Internet. Advanced access control allows you to configure access via specific services. Most users will not need to change any of these settings.

To access the REMOTE MANAGEMENT setting window, click on the REMOTE MANAGEMENT button in the ADVANCED tab.

REMOTE MANAGEMENT SETTINGS

Please enable the ENABLE Remote Management.

Please type the port number which you want to replace the original port.

Please select Allow All or Deny All on the Remote Admin Inbound Filter.

Please type a string to describe the action on the Details.

REMOTE ACCESS CONTROL

Check which Service to Enabled on LAN or WAN.
Section 3 - Configuration

ROUTING SETUP

Enter the destination network address, subnet mask, gateway AND/OR available WAN interface then click "Apply" to add the entry to the routing table. A maximum 32 entries can be configured. Allows you to configure RIP (Routing Information Protocol). To activate RIP for the device, select the 'Enabled' radio button for Global RIP Mode. To configure an individual interface, select the desired RIP version and operation, followed by placing a check in the 'Enabled' checkbox for the interface. Click the 'Apply' button to save the configuration, and to start or stop RIP based on the Global RIP mode selected.

To access the Routing setting window, click on the Routing button under the ADVANCED tab.

Routing -- Static Route

Please click the Add or Edit button to set a static routing policy in the list.

Please type the Destination Network Address and Subnet Mask.

Please choose type Use the Gateway IP, Use the IPv4 interface or Use the IPv6 interface to be the routing interface.

Click the Apply the button to save the configuration.
Routing -- RIP Configuration

Please choose the **Version** and **Operation**, and then decide to **Enable** or not.
**WI-FI PROTECTED SETUP**

**Wi-Fi Protected Setup** is used to easily add devices to a network using a PIN or button press. Devices must support Wi-Fi Protected Setup in order to be configured by this method.

To access the **WI-FI PROTECTED SETUP** window, click on the **Wi-Fi Protected Setup** button under the **ADVANCED** tab.

**Wi-Fi Protected Setup**

Please select to **Enable** or **Lock** Wireless Security Settings

**PIN Settings:** Choose to click the **Reset PIN to Default** button or **Generate New PIN** button to show the PIN on the Current PIN.

**ADD WIRELESS STATION:** Please click the **Add Wireless Device** with WPS button to set the WPS.
IPV6 FIREWALL

The Firewall settings section is an advance feature used to allow or deny traffic from passing through the device. It works in the same way as ip filters with additional settings. You can create more detail rules for the device.

To access the IPv6 Firewall setting window, click on the IPv6 Firewall button in the ADVANCE table

ACTIVE FIREWALL RULES

Click Add button to add Firewall Rules.

IPV6 FIREWALL RULE

Type Rule Name, select Schedule (Schedule Rule can be set as following).

Type Source Address Range, select Use Interface and Protocol in drop-down menu.

Type Dest Address Range, Dest Port Range and select Use Interface in drop-down menu.
Section 3 - Configuration

SCHEDULE RULE

Click Add button to add Rules.

ADD SCHEDULE RULE

Type Name for this rule and select Day(s), you can select All Week or select Day(s).

Check All Day-24hr or set Start time to End Time.
IPV6 ROUTING

This Routing page allows you to specify custom routes that determine how data is moved around your network. A maximum 20 entries can be configured.

To access the IPv6 Routing setting window, click on the IPv6 Routing button in the ADVANCE table.

STATIC IPV6 ROUTES

Click Add button to add Rules.

STATIC ROUTE ADD/EDIT

Type Rule/Name for this rule.

Type Destination IPv6/Prefix, Metric and Gate way IP Address.

Select Use Interface in drop-down menu.
Budget Quota can be used to implement the limitation quota and other functions. You can limit the data transmission quota and time on WAN interface or LAN interface.

To access the Budget Quota window, click on the Budget Quota button under the ADVANCED tab.

Budget Quota

Please select to Enable limitation Quota

Select interface to limit the data transmission quota.

Set Limit time(days)

Check Enable Download quota and set Download quota(Max, GB)

Check Enable Upload quota and set Upload quota(Max, GB)
The LOGOUT page enables you to logout of your router configuration and closes the browser.

To access the LOGOUT setting window, click on the Logout button in the SETUP tab

Click on the Logout button to logout of the router configuration settings and close the browser.
MAINTENANCE

Click on the MAINTENANCE tab to reveal the window buttons for various functions located in this directory.

PASSWORD

The factory default password of this router is 'admin'. To help secure your network, D-Link recommends that you should choose a new password.

To access the PASSWORD setting window, click on the PASSWORD button in the MAINTENACE tab

PASSWORD

Set Password (optional)

Please type the Current Password, New Password, Confirm Password and the Idle Time Out.

Please click the Apply Settings button to save the settings.

GRAPHIC LOG-IN AUTHENTICATION (CAPTCHA)

To enhance your router login security, you can enable CAPTCHA.

Please click the Apply Settings button to save the configuration.
SAVE/RESTORE SETTINGS

Once the router is configured and you can save the configuration settings to a configuration file on your hard drive. You also have the option to load configuration settings, or restore the factory default settings.

To access the **Save/Restore Configuration** setting window, click on the **Save/Restore Configuration** button in the **MAINTENANCE** tab.

**Save/Restore Configuration**

Please click the **Save** button on the Save Settings to Local Hard Drive.

Please click **Browse** button to choose the configuration file and then click the **Update Settings** button to upload.

If necessary, please click the **Restore Device** button to have the default settings.
FIRMWARE UPDATE

Use the FIRMWARE UPGRADE window to load the latest firmware for the device. Note that the device configuration settings may return to the factory default settings, so make sure you first save the configuration settings with the SAVE/RESTORE SETTINGS window described above.

To access the FIRMWARE UPGRADE setting window, click on the Firmware Update button under the MAINTENANCE tab.

FIRMWARE UPDATE

To upgrade firmware, click on the Browse button to search for the firmware file and then click the Upload button to begin copying the file.

The Router will load the file and restart automatically.
DIAGNOSTICS

Your router is capable of testing your DSL connection. The individual tests are listed below. If a test displays a fail status, click "Return Diagnostics Tests" at the bottom of this page to make sure fail status is consistent. If the test continues to fail, click "Help" and follow the troubleshooting procedures.

To access the Diagnostics setting window, click on the Diagnostics button under the MAINTENANCE tab.

**System check**

There are Test your eth0/eth1/eth2/eth3 Connection, Test your Wireless Connection and Test ADSL Synchronization and they will show PASS or FAIL

**INTERNET CONNECTIVITY Check**

There are Ping ISP Default Gateway/ Primary DNS server and they will show PASS or FAIL

Please click the Test button to Diagnostic the above test items.
PING TEST

The tests on this page can be used to verify whether or not your router is working correctly. If you have rerun the tests and consulted the help file and you are still experiencing difficulties,

To access the Ping test setting window, click on the Ping test Diagnostics button under the MAINTENANCE tab.

PING TEST
You can type Host Name or IP Address and click Ping button

IPv6 PING TEST
You can type Host Name or IPv6 Address and click Ping button

PING RESULT
When you click Stop button, the ping results will show in PING RESULT windows
SYSTEM LOG

The system Log allows you to configure local, remote and email logging, and to view the logs that have been created.

To access the SYSTEM LOG setting window, click on the System Log button under the MAINTENANCE tab.

Remote Log Setting

Check Log Enable box:

Log Level: All events above or equal to the selected level will be logged.

Display Level: All logged events above or equal to the selected level will be displayed.

Mode: Display mode of system log. Local: Display on local host only

Server IP Address: IP address of the remote system log server

Server UDP Port: UDP port number of the remote system log server

ENABLE EMAIL NOTIFICATION

Please enable. If any logs occur, the system will send mail to the mail address you set.
Section 3 - Configuration

EMAIL SETTINGS

Please type the From MAIL Address, To MAIL Address and SMTP Server Address.

Please Enable the Enable Authentication and then set the Account Name, Account Password and Verity Password.

EMAIL LOG WHEN FULL

Please Enable the On Log Full. When the log file is full, the system will send mail to the mail address you set.

View System Log

The system will show logs in the list by Date/Time, Facility, Severity and Message.

Please click the Apply Settings button to save the configuration.
SCHEDULE

Schedule allows you to create scheduling rules to be applied for your firewall. Maximum of 16 entries

To access the SCHEDULE RULE setting window, click on the SCHEDULE RULE button under the MAINTENANCE tab.

SCHEDULE RULE

Press Add / Edit / Delete button to modify your SCHEDULE RULE list.

ADD SCHEDULE RULE

Type Name for your schedule.

Select Day(s) or ALL Day-24hrs to active your firewall and type Start Time to End Time.

Click the Apply the button to save the configuration.
STATUS

Click on the STATUS tab to reveal the window buttons for various functions located in this directory. The DEVICE STATUS window is the first item in the STATUS directory. Use these windows to view system information and monitor performance.

DEVICE INFO

The Device Info page displays a summary overview of your router status, including: Device software version and summary of your Internet configuration (both wireless and Ethernet status).

To access the DEVICE INFO setting window, click on the Device Info button in the STATUS tab.

This window displays current SYSTEM INFO, INTERNET INFO, WIRELESS INFO and LOCAL NETWORK INFO.
INTERNET INFO
This window displays WAN information including IP address, Mask, Default Gateway, Primary/Secondary DNS Server.

WIRELESS LAN
This window displays authenticated wireless stations and their status.

LOCAL NETWORK INFO
This window displays LAN information including MAC, IP address, Mask, and DHCP Server.
Section 3 - Configuration

CONNECTED CLIENTS

This feature shows all the currently connected wireless and LAN computers or PCs.

To access the Wireless clients setting window, click on the Connected Clients button in the STATUS tab.

CONNECTED WIRELESS CLIENTS
This window displays authenticated wireless stations and their status.

CONNECTED LAN CLIENTS
This window displays all the entities which link to the LAN interface successfully.

You can choose to block which entities and click the Block button.
This information reflects the current status of your router.

To access the **STATISTICS** window, click on the Logs button in the **STATISTICS** tab.

**LAN STATISTICS**

This window displays all the **Receiver** and **Transmitted** packet status on the LAN interface.

**WAN STATISTICS**

This window displays all the **Receiver** and **Transmitted** packet status on the WAN interface.
Section 3 - Configuration

ADSL STATISTICS

This window displays all the ADSL status

You can click the **ADSL BER Test** button to test the ADSL connection.

You can click the **Reset Statistics** button to set all statistics to recount.

| ADSL STATISTICS |
|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|
| Model:          | ADSL_24661      |
| Traffic Type:   | ATM             |
| Status:         | Up              |
| Link Power State: | LO             |
| Line Coding/Trellis: | Downstream: On, Upstream: On |
| SNR Margin (0.1 dB): | 56, 66          |
| Attenuation (0.1 dB): | 0, 4           |
| Outdoor Power (0.1 dBm): | 94, 60         |
| Attenuation Ratio (dBps): | 277600, 3389 |
| Rate (Mbps):    | 27322           | 2473            |
| BCLG: (# of bytes in overhead channel message): | 51, 14          |
| FCLG: (# of bytes in FCLG Data Frame): | 243, 18         |
| MCLG: (# of Max Data Frames in FCLG Data Frame): | 1, 16           |
| T: (#Max Data Frames over sync bytes): | 4, 0            |
| R: (# of check bytes in sync frame): | 0, 0            |
| E: (# of sync bytes over FCLG Data Frame): | 0.2954, 5.7307  |
| L: (# of sync bytes in FCLG Data Frame): | 0.3399, 525     |
| D: Interleaver depth: | 1, 8            |
| Delay (micro): | 0.7, 13.42      |
| SMP: (SMP symbol): | 0.2, 0.78      |
| Super Frames:   | 0, 0            |
| Super Frame Errors: | 0, 0         |
| RS Words:       | 0, 56000532     |
| RS Correctable Errors: | 0, 0         |
| RS Uncorrectable Errors: | 0, 0        |
| HEC Errors:     | 0, 0            |
| CCK2 Errors:    | 0, 0            |
| UID Errors:     | 0, 0            |
| Total Calls:    | 1005796019, 7269603 |
| Data Calls:     | 714244, 27980   |
| Bit Errors:     | 0, 0            |
| Total E1:       | 0, 0            |
| Total B1s:      | 0, 0            |
| Total U1s:      | 19, 19          |
ROUTING INFO

To access the ROUTE INFO setting window, click on the ROUTE INFO button under the STATUS tab.

The Route Info section displays route information showing the IP addresses of the destination, gateway, and subnet mask as well as other route information.
To access the IPv6 Status setting window, click on the IPv6 Status button under the STATUS tab.

All of your IPv6 Internet and network connection details are displayed on this page.
IPv6 ROUTING INFO

To access the IPv6 Routing Info setting window, click on the IPv6 Routing Info button under the STATUS tab.

This Routing page displays the IPv6 routing details configured for your router.
Troubleshooting

This chapter provides solutions to problems that can occur during the installation and operation of the DSL-2750B. Read the following descriptions if you are having problems. (The examples below are illustrated in Windows® XP. If you have a different operating system, the screenshots on your computer will look similar to the following examples.)

1. **Why can’t I access the web-based configuration utility?**

When entering the IP address of the D-Link router (192.168.1.1 for example), you are not connecting to a website on the Internet or have to be connected to the Internet. The device has the utility built-in to a ROM chip in the device itself. Your computer must be on the same IP subnet to connect to the web-based utility.

- Make sure you have an updated Java-enabled web browser. We recommend the following:
  - Internet Explorer 6.0 or higher
  - Firefox 1.5 or higher
- Verify physical connectivity by checking for solid link lights on the device. If you do not get a solid link light, try using a different cable or connect to a different port on the device if possible. If the computer is turned off, the link light may not be on.
- Disable any internet security software running on the computer. Software firewalls such as Zone Alarm, Black Ice, Sygate, Norton Personal Firewall, and Windows® XP firewall may block access to the configuration pages. Check the help files included with your firewall software for more information on disabling or configuring it.
Section 4 - Troubleshooting

- Configure your Internet settings:
  - Go to Start > Settings > Control Panel. Double-click on the Internet Options Icon. From the Security tab, click on the button to restore the settings to their defaults.
  - Click on the Connection tab and set the dial-up option to Never Dial a Connection. Click on the LAN Settings button. Make sure nothing is checked. Click on the OK.
  - Go to the Advanced tab and click on the button to restore these settings to their defaults. Click on the OK button three times.
  - Close your web browser (if open) and open it.

- Access the web management. Open your web browser and enter the IP address of your D-Link router in the address bar. This should open the login page for the web management.

- If you still cannot access the configuration, unplug the power to the router for 10 seconds and plug back in. Wait about 30 seconds and try accessing the configuration. If you have multiple computers, try connecting using a different computer.

2. What can I do if I forgot my password?

If you forgot your password, you must reset your router. Unfortunately this process will change all your settings back to the factory defaults.

To reset the router, locate the reset button (hole) on the rear panel of the unit. With the router powered on, use a paperclip to hold the button down for 10 seconds. Release the button and the router will go through its reboot process. Wait about 30 seconds to access the router. The default IP address is 192.168.1.1. When logging in, type in the default User Name “admin,” and the default Password “admin” then click on the OK button to access the web-based manager.
APPENDIX

Wireless Basics

D-Link wireless products are based on industry standards to provide easy-to-use and compatible high-speed wireless connectivity within your home, business or public access wireless networks. Strictly adhering to the IEEE standard, the D-Link wireless family of products will allow you to securely access the data you want, when and where you want it. You will be able to enjoy the freedom that wireless networking delivers.

A wireless local area network (WLAN) is a cellular computer network that transmits and receives data with radio signals instead of wires. Wireless LANs are used increasingly in both home and office environments, and public areas such as airports, coffee shops and universities. Innovative ways to utilize WLAN technology are helping people to work and communicate more efficiently. Increased mobility and the absence of cabling and other fixed infrastructure have proven to be beneficial for many users.

Wireless users can use the same applications they use on a wired network. Wireless adapter cards used on laptop and desktop systems support the same protocols as Ethernet adapter cards.

Under many circumstances, it may be desirable for mobile network devices to link to a conventional Ethernet LAN in order to use servers, printers or an Internet connection supplied through the wired LAN. A Wireless Router is a device used to provide this link.

What is Wireless?
Wireless or Wi-Fi technology is another way of connecting your computer to the network without using wires. Wi-Fi uses radio frequency to connect wirelessly, so you have the freedom to connect computers anywhere in your home or office network.

Why D-Link Wireless?
D-Link is the worldwide leader and award winning designer, developer, and manufacturer of networking products. D-Link delivers the performance you need at a price you can afford. D-Link has all the products you need to build your network.

How does wireless work?
Wireless works similar to how cordless phone work, through radio signals to transmit data from one point A to point B. But wireless technology has restrictions as to how you can access the network. You must be within the wireless network range area to be able to connect your computer. There are two different types of wireless networks Wireless Local Area Network (WLAN), and Wireless Personal Area Network (WPAN).
Wireless Local Area Network (WLAN)
In a wireless local area network, a device called an Access Point (AP) connects computers to the network. The access point has a small antenna attached to it, which allows it to transmit data back and forth over radio signals. With an indoor access point as seen in the picture, the signal can travel up to 300 feet. With an outdoor access point the signal can reach out up to 30 miles to serve places like manufacturing plants, industrial locations, college and high school campuses, airports, golf courses, and many other outdoor venues.

Wireless Personal Area Network (WPAN)
Bluetooth is the industry standard wireless technology used for WPAN. Bluetooth devices in WPAN operate in a range up to 30 feet away. Compared to WLAN the speed and wireless operation range are both less than WLAN, but in return it doesn’t use nearly as much power which makes it ideal for personal devices, such as mobile phones, PDAs, headphones, laptops, speakers, and other devices that operate on batteries.

Who uses wireless?
Wireless technology as become so popular in recent years that almost everyone is using it, whether it’s for home, office, business, D-Link has a wireless solution for it.

Home
- Gives everyone at home broadband access
- Surf the web, check email, instant message, download multimedia files.
- Gets rid of the cables around the house
- Simple and easy to use

Small Office and Home Office
- Stay on top of everything at home as you would at the office
- Remotely access your office network from home
- Share the Internet connection and printer with multiple computers
- No need to dedicate office space

Where is wireless used?
Wireless technology is expanding everywhere not just at home or office. People like the freedom of mobility and it’s becoming so popular that more and more public facilities now provide wireless access to attract people. The wireless connection in public places is usually called “hotspots”.

D-Link DSL-2750B User Manual
Using a D-Link Cardbus Adapter with your laptop, you can access the hotspot to connect to Internet from remote locations like: Airports, Hotels, Coffee Shops, Libraries, Restaurants, and Convention Centers.

Wireless network is easy to setup, but if you’re installing it for the first time it could be quite a task not knowing where to start. That’s why we’ve put together a few setup steps and tips to help you through the process of setting up a wireless network.

**Tips**

Here are a few things to keep in mind, when you install a wireless network.

**Centralize your router or Access Point**

Make sure you place the router/access point in a centralized location within your network for the best performance. Try to place the router/access point as high as possible in the room, so the signal gets dispersed throughout your home. If you have a two-story home, you may need a repeater to boost the signal to extend the range.

**Eliminate Interference**

Place home appliances such as cordless telephones, microwaves, and televisions as far away as possible from the router/access point. This would significantly reduce any interference that the appliances might cause since they operate on same frequency.

**Security**

Don’t let your next-door neighbors or intruders connect to your wireless network. Secure your wireless network by turning on the WPA security feature on the router. Refer to product manual for detail information on how to set it up.

**Wireless Modes**

There are basically two modes of networking:

- **Infrastructure** – All wireless clients will connect to an access point or wireless router.
- **Ad-Hoc** – Directly connecting to another computer, for peer-to-peer communication, using wireless network adapters on each computer, such as two or more D-Link wireless network adapters.

An Infrastructure network contains an Access Point or wireless router. All the wireless devices, or clients, will connect to the wireless router or access point.

An Ad-Hoc network contains only clients, such as laptops with wireless cardbus adapters. All the adapters must be in Ad-Hoc mode to communicate.
Check your IP address

After you install your new D-Link adapter, by default, the TCP/IP settings should be set to obtain an IP address from a DHCP server (i.e. wireless router) automatically. To verify your IP address, please follow the steps below.

Click on **Start > Run**. In the run box type **cmd** and click on the **OK**.

At the prompt, type **ipconfig** and press **Enter**.

This will display the IP address, subnet mask, and the default gateway of your adapter.

If the address is 0.0.0.0, check your adapter installation, security settings, and the settings on your router. Some firewall software programs may block a DHCP request on newly installed adapters.

If you are connecting to a wireless network at a hotspot (e.g. hotel, coffee shop, airport), please contact an employee or administrator to verify their wireless network settings.
Appendix B - Networking Basics

Statically Assign an IP address

If you are not using a DHCP capable gateway/router, or you need to assign a static IP address, please follow the steps below:

Step 1
Windows® XP - Click on Start > Control Panel > Network Connections.
Windows® 2000 - From the desktop, right-click on the My Network Places > Properties.

Step 2
Right-click on the Local Area Connection which represents your D-Link network adapter and select Properties.

Step 3
Highlight Internet Protocol (TCP/IP) and click on the Properties.

Step 4
Click on the Use the following IP address and enter an IP address that is on the same subnet as your network or the LAN IP address on your router. Example: If the router’s LAN IP address is 192.168.0.1, make your IP address 192.168.0.X where X is a number between 2 and 99. Make sure that the number you choose is not in use on the network. Set Default Gateway the same as the LAN IP address of your router (192.168.0.1).

Set Primary DNS the same as the LAN IP address of your router (192.168.0.1). The Secondary DNS is not needed or you may enter a DNS server from your ISP.

Step 5
Click on the OK twice to save your settings.
FCC Caution

Statement:
This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Class B:
FEDERAL COMMUNICATIONS COMMISSION INTERFERENCE STATEMENT This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a Particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

CAUTION:
Any changes or modifications not expressly approved by the grantee of this device could void the user's authority to operate the equipment.

Support:
DSL-2740B, DSL-2750B. DSL-2741B, DSL-2750U, DSL-2741U
English:
This Class B digital apparatus complies with Canadian ICES-003 and RSS-210. Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Française:
Cet appareil numérique de classe B est conforme aux normes canadiennes ICES-003 et RSS-210. Son fonctionnement est soumis aux deux conditions suivantes : (1) cet appareil ne doit pas causer d'interruption et (2) cet appareil doit accepter toute interférence, notamment les interférences qui peuvent affecter son fonctionnement.
Contacting Technical Support

You can find software updates and user documentation on the D-Link websites.
If you require product support, we encourage you to browse our FAQ section on the Web Site before contacting the Support line.
We have many FAQ’s which we hope will provide you a speedy resolution for your problem.

Introduction

The D-Link SharePort™ allows you to share USB devices such as external storage drives and multifunction printers with other users across your network by simply connecting the device to select D-Link routers. This allows you to use an external storage drive or printer located across your network as if it were connected to your local PC.

System Requirements

- Windows
- 2000 / 2003 / XP / Vista / 7 32-bit / 64-bit
- Pentium 3 800MHz or better
- 256MB RAM or higher
- CD-ROM drive
- A compatible D-Link router

Installation

1. Insert the CD-ROM into your computer.
2. Follow the on-screen instructions.
3. The 🎈 icon should appear in the System Tray at the lower-right corner on the desktop.
Appendix F – DLink SharePort

- **Set up the D-Link Router**
  1. Connect the D-Link Router to the network.
  3. Double-click on the icon to open the D-Link SharePort.
  4. Right-click on in the System Tray at the lower-right corner on your Windows Desktop. A window pops up to display the D-Link Router.

- **Enable Network USB on the D-Link Router**
  1. Click on the D-Link Router.
  2. Click on **Enable**.
  3. The icon in the Windows System Tray should change to a icon.

- **Connect USB Devices to the D-Link Router**
  The D-Link SharePort automatically detects for each connected USB device. A window will pop up for each detected USB device.
Appendix F – DLink SharePort

1. Right-click on the 🤝 icon.

2. Click on Open SharePort.

3. The D-Link SharePort displays the connected USB devices on the network.

4. Advanced Options can be set by clicking on Advanced Options.

● Virtually Connect and Disconnect a USB Device

1. Move the cursor to Waiting to Connect and click on Connect to virtually connect a USB device.
Appendix F – DLink SharePort

2. The D-Link SharePort displays which user is virtually connecting this USB device.

3. Move the cursor to In Use By (Owner) and click on Disconnect to virtually disconnect the USB device.

● When the USB Device is a Multifunction Printer

1. Move the cursor to Waiting to Connect and click on Manage Device.
2. Click **Yes** on the question “Do you want to install the printer software or MFP utility?”

3. Insert the CD-ROM of the multifunction printer and follow the instructions to install the multifunction printer’s driver. When the installation process prompts you to connect the multifunction printer to your PC, click **Next**.

4. The D-Link SharePort virtually connects to this multifunction printer. Click **Next**
5. Choose the printer driver that you want D-Link SharePort to auto-connect when you print.

- **When You Want to Scan**
  1. Move the cursor to Available for Use and click on **Scan Now**.
Appendix – G Technical Specifications

Technical Specifications

ADSL Standards
- ANSI T1.413 Issue 2
- ITU G.992.1 (G.dmt) Annex A
- ITU G.992.2 (G.lite) Annex A

ADSL2 Standards
- ITU G.992.3 (G.dmt.bis) Annex A
- ITU G.992.4 (G.lite.bis) Annex A

ADSL2+ Standards
- ITU G.992.5 Annex A

Protocols
- IEEE 802.1d Spanning Tree
- TCP/UDP
- ARP
- RARP
- ICMP
- RFC1058 RIP v1
- RFC1213 SNMP v1 & v2c
- RFC1334 PAP
- RFC1389 RIP v2
- RFC1577 Classical IP over ATM
- RFC1483/2684 Multiprotocol Encapsulation over ATM Adaptation Layer 5 (AAL5)
- RFC1661 Point to Point Protocol
- RFC1994 CHAP
- RFC2131 DHCP Client / DHCP Server
- RFC2364 PPP over ATM
- RFC2516 PPP over Ethernet
- RFC4545 IPv6 over ATM
- RFC4873 BGP
- RFC5692 Wireless Link Control (WLC)
- RFC5791 Mobile IPv6
- RFC6550 Link Aggregation

Data Transfer Rate

ADSL
- G.dmt: full rate downstream: up to 8 Mbps / upstream: up to 1 Mbps
- G.lite: downstream up to 1.5 Mbps / upstream up to 512 Kbps

ADSL2
- G.dmt.bis full rate downstream: up to 12 Mbps / upstream: up to 1 Mbps

ADSL 2+
- Full rate downstream: up to 24 Mbps / upstream: up to 1 Mbps

Media Interface
- ADSL interface: RJ-11 connector for connection to 24/26 AWG twisted pair telephone line
- LAN interface: RJ-45 port for 10/100BASE-T Ethernet connection

WIRELESS LAN
- 802.11b/g/n standards
- Wireless speed: up to 300Mbps (802.11n)
- Frequency range: 2.4 GHz to 2.484G Hz
- Antennas: 2 non-detachable dipole antennas.
- WEP data encryption
- WPA/WPA2 (Wi-Fi Protected Access) security
- Multiple SSID
- 802.11e Wireless QoS (WMM/WME)
- MAC address-based access control

* Maximum wireless signal rate derived from IEEE Standard 802.11n specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental factors will adversely affect wireless signal range.
