D-Link DSL-2770L User Manual
Package Contents

- DSL-2770L ADSL2+ Gigabit Cloud Router N300
- Power Adapter
- Ethernet Cable
- Telephone Cable for connection to your DSL line
- Quick Installation Guide
- CD-ROM with Installation Wizard and User Manual

If any of the above items are missing, please contact your reseller.

**Note:** Using a power supply with a different voltage rating than the one included with the DSL-2770L may cause damage and will void the warranty for this product.
# System Requirements

| Network Requirements | • A subscription with an Internet Service Provider  
<table>

Introduction

The D-Link ADSL2+ Gigabit Cloud Router N300 (DSL-2770L) comes equipped with four Gigabit ports to provide speeds up to 10x faster than standard 10/100 ports. It also uses 802.11n technology that significantly outperforms 802.11g devices. With the addition of Intelligent Quality of Service (QoS), data streams are separated which helps organize and prioritize your network traffic so your video streaming, gaming, and VoIP calls run smoother over both your wired and wireless network.

The ADSL2+ Gigabit Cloud Router N300 is also mydlink-enabled, which gives you access to your home network no matter where you go. Now you can monitor and manage your home network right from your laptop, iPhone®, iPad®, or Android™ device. mydlink-enabled routers can be configured to send an email to keep you informed anywhere, anytime when new devices are connecting to your network or unwanted access is detected. Monitor in real-time websites that are being visited with recent browser history displayed on the mydlink™ Lite app – which is great for parents.

SharePort Mobile technology lets you take advantage of the USB 2.0 port found on the back of your DSL-2770L. Plug in a USB storage drive and you can use the SharePort Mobile app for iOS and Android to access files, stream videos, view photos, or listen to music on your laptop or mobile devices. Plug in a printer and you can use SharePort to share access to that printer with your entire network.

The DSL-2770L ADSL2+ Gigabit Cloud Router N300 provides incredible speeds, fast ports, cloud features, and terrific security features. It also features an innovative design and easy installation options.
Section 1 - Product Overview

Features

• **Fast Wireless Networking** - The DSL-2770L provides up to a full 300 Mbps* wireless connection with other 802.11n wireless clients.

• **Cloud Features** - The DSL-2770L is mydlink-enabled so you can remotely access and manage your router from a mobile device. SharePort Mobile can be used to share files, stream videos, view photos, and play music, and SharePort lets you share a printer.

• **Compatible with 802.11n/g/b Devices** - The DSL-2770L is still fully compatible with the IEEE 802.11g and 802.11b standards, so it can connect with all your existing wireless devices.

• **Advanced Firewall Features** - The Web-based user interface displays a number of advanced network management features including:
  
  • **Content Filtering** - Easily applied content filtering based on MAC Address, URL, and/or Domain Name.
  • **Filter Scheduling** - These filters can be scheduled to be active on certain days or for a duration of hours or minutes.
  • **Secure Multiple/Concurrent Sessions** - The DSL-2770L can pass through VPN sessions. It supports multiple and concurrent IPSec and PPTP sessions, so users behind the DSL-2770L can securely access corporate networks.

• **User-friendly Setup Wizard** - Through its easy-to-use Web-based user interface, the DSL-2770L lets you control what information is accessible to those on the wireless network, whether from the Internet or from your company’s server. Configure your router to your specific settings within minutes.

* Maximum wireless signal rate derived from IEEE Standard 802.11b, 802.11g, and 802.11n specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental conditions will adversely affect wireless signal range.
Section 1 - Product Overview

Hardware Overview

1. Wi-Fi On/Off Button
   Turns the wireless network on and off.
2. Power Button
   Turns the DSL-2770L on and off.
3. USB Port
   Connects to a USB flash drive to share content, or connect it to a USB printer to share it on your network.
4. Gigabit LAN Ports (1-3)
   Connect to Ethernet devices such as computers, switches, storage (NAS) devices and game consoles.
5. Gigabit LAN/WAN Port (4)
   Connects to Ethernet devices, or to another modem or Internet connection when the WAN interface is enabled on the GUI. For more information, refer to “Internet Setup” on page 16.
6. DSL Port
   Connects to your DSL phone line.
7. Power Receptor
   Receptor for the supplied power adapter.
Hardware Overview
Front/Bottom

1. Status LEDs
   - Power: Indicates the router is receiving power
   - Internet: Indicates traffic to and from the Internet
   - DSL: Indicates activity on your DSL connection
   - Wi-Fi (WLAN): Indicates activity on your wireless network
   - LAN (1-4): Indicates activity by a connected device
   - USB: Indicates activity on the USB port

2. WPS Button
   Helps create a secure wireless connection to a device automatically. To connect a device using WPS, press the WPS button on your device, then press the WPS button on the router within 120 seconds.

3. Reset Button
   Use an unfolded paperclip to press and hold the reset button for 6 seconds to reset all settings to their factory defaults.

Note: Resetting your router will delete all settings on it.
Installation

This section will walk you through the installation process. Placement of the router is very important. Do not place the router in an enclosed area such as a closet, cabinet, or in the attic or garage.

Before you Begin

• Please configure the router with the computer that was last connected directly to your modem.

• Make sure you disable or uninstall any PPPoE software such as WinPoet, Broadjump, or Enternet 300 from your computer or you will not be able to connect to the Internet.
Wireless Installation Considerations

The D-Link wireless router lets you access your network using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind, however, that the number, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through, may limit the range. Typical ranges vary depending on the types of materials and background RF (radio frequency) noise in your home or business. The key to maximizing wireless range is to follow these basic guidelines:

1. Keep the number of walls and ceilings between the D-Link router and other network devices to a minimum - each wall or ceiling can reduce your adapter’s range from 3-90 feet (1-30 meters.) Position your devices so that the number of walls or ceilings is minimized.

2. Be aware of the direct line between network devices. A wall that is 1.5 feet thick (.5 meters), at a 45-degree angle appears to be almost 3 feet (1 meter) thick. At a 2-degree angle it looks over 42 feet (14 meters) thick! Position devices so that the signal will travel straight through a wall or ceiling (instead of at an angle) for better reception.

3. Building Materials make a difference. A solid metal door or aluminum studs may have a negative effect on range. Try to position access points, wireless routers, and computers so that the signal passes through drywall or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.

4. Keep your product away (at least 3-6 feet or 1-2 meters) from electrical devices or appliances that generate RF noise.

5. If you are using 2.4GHz cordless phones or X-10 (wireless products such as ceiling fans, lights, and home security systems), your wireless connection may degrade dramatically or drop completely. Make sure your 2.4GHz phone base is as far away from your wireless devices as possible. The base transmits a signal even if the phone in not in use.
Setup Wizard (on Installation CD)

The Installation CD included in your package has a Setup Wizard that guides you through the installation and configuration of your DSL-2770L.

**Note**: It is highly recommended that you use this Setup Wizard to install and configure your DSL-2770L.

1. Insert the Installation CD into your PC’s CD-ROM drive.

2. The Setup Wizard should start automatically. Follow the on-screen instructions to set up and configure your DSL-2770L.

**Note**: If the Setup Wizard does not start automatically, go to your CD in Windows and double-click the setup file to start the wizard.
Connecting the DSL-2770L

1. Position your router close to your modem and a computer. Place the router in an open area of your intended work area for better wireless coverage.

2. Connect your DSL phone line to the DSL port.

3. Plug the included Ethernet cable into your PC’s Ethernet port. Plug the other end of the cable into one of the four LAN ports on the DSL-2770L.

4. Connect the supplied power adapter into the power receptor on the back of the router and then plug it into a power outlet or surge protector. Press the power button and verify that the power LED is lit. Allow 1 minute for the router to boot up.

To continue on to configuring the DSL-2770L, refer to “Web-based Configuration Utility” on page 15.

Connecting to another modem or Internet line: If you are connecting the DSL-2770L to another modem or a wired Internet connection, connect the Ethernet cable from your Internet source to port 4 on the DSL-2770L. Refer to “Ethernet/3G WAN Interface” on page 26 for setup details.

Connecting to a 3G USB adapter: If you are connecting a 3G USB adapter to use for your Internet connection, plug it into the USB port. Refer to “Ethernet/3G WAN Interface” on page 26 for setup details.
Section 3 - Configuration

SharePort Mobile App (iOS, Android)

The SharePort Mobile app will allow you to access files from a USB storage drive that is plugged into your router. You must enable file sharing from the Setup > Storage page (refer to page 60) for this app to work properly.

1. Plug your USB storage drive into the USB port.
   
   **Note:** The DSL-2770L supports USB storage drives with up to one terabyte (1 TB) of storage capacity.

2. Use your iOS or Android mobile device to scan the QR code to the right to download the SharePort Mobile app.

   You can also search for the SharePort Mobile app directly in the iOS App Store or Google Play.

3. From your iOS or Android mobile device, choose Settings.

   **Note:** These steps are for the iOS version of the app. The Android version may differ slightly.
4. Click **Wi-Fi**, select the Wi-Fi Network Name (SSID) that you created during setup and then enter the default Wi-Fi password located on your Wi-Fi configuration note.

5. Once connected, tap on the **SharePort Mobile** icon.

6. The following screen will appear.
7. Tap on the **Settings** icon located on the right top corner of the screen. Tap **Edit** to enter your User Name and Password (the default username is *admin* and the password field should be left blank). Once you finish, click **Done** to continue.

8. For the Movie section, click the movie icon to play your movie from your USB flash drive.

9. For the Music section, click the music icon to play your music from your USB flash drive.
10. For the Photo section, click the Photo icon to view your photos from your USB flash drive.

11. For the Files section, click on the Files icon to view your files from your USB flash drive.

12. For the Folder section, click the folder icon to view your folders from your USB flash drive.
Web-based Configuration Utility

To access the configuration utility, open a web-browser such as Internet Explorer and enter http://dlinkrouter.local.

Windows and Mac users may also connect by typing the IP address of the router (http://192.168.1.1) in the address bar.

Enter your password. The password should be left blank by default.
Internet Setup

From this screen, you can set up various settings related to your Internet connection.

**ADSL Interface**  Click the **Setup** button to see and edit your ADSL settings.

**Ethernet/3G WAN Interface**  Click this **Setup** button to see and edit the WAN settings if you are using a 3G USB adapter or are using port 4 as a WAN port. This allows you to use the DSL-2770L as a router for another modem or Internet connection.
Section 3 - Configuration

ADSL Interface

If you clicked the Setup button for ADSL Interface, you will see the following settings. You can click the Setup Wizard button to use a step by step wizard that guides you through configuration of your ADSL settings. See the following pages for how to use the Setup Wizard. If you are not sure what settings to use, please contact your Internet Service Provider.

**WAN Interface** Select the WAN interface to configure, and whether to enable or disable it.

**My Internet Connection Is:** Select the WAN connection type for your ISP. Based on which connection type you choose, different settings will be displayed below. These settings are described on the following pages after the Setup Wizard pages.

- Ethernet Over ATM (RFC1483 Bridged) with NAT
- IP over ATM (RFC 1483 Routed)
- PPP over Ethernet
- PPP over ATM
- RFC 1483 Bridged

**Host Name:** Enter a host name to use for your connection.

The settings displayed in the middle will vary depending on what you select for the **My Internet Connection Is** setting. See the following pages for details.

**Data** Select VCMux or LLC based on your ISP’s recommended settings.

**Encapsulation:**

- **Country/ISP Provider:** Selecting your country and ISP provider from the dropdown boxes will automatically fill in the VPI and VCI numbers for you.

- **VPI Number:** Enter the VPI number specified by your ISP.

- **VCI Number:** Enter the VCI number specified by your ISP.

- **Schedule type:** Select UBR, CBR, VBR, or GFR based on your ISP’s recommended settings.

- **Multicast:** You can set multicast mode to Auto, IGMP v1, IGMP v2, or IGMP v3.

**IGMP Snooping:** You can enable the IGMP snooping function by checking this box.

**VLAN TAG:** You can enable and specify the VLAN TAG if required by your ISP.
Section 3 - Configuration

Setup Wizard

This Wizard will help you set up an ADSL connection.

Click **Next** to continue.

Enter a password for your network and verify it in the box below, then click **Next**.

Select your time zone from the drop-down menu and click **Next**.
Section 3 - Configuration

Select your Internet connection type from Ethernet Over ATM (RFC1483 Bridged) with NAT, IP over ATM (RFC 1483 Routed), PPP over Ethernet, PPP over ATM, and RFC 1483 Bridged. Click **Next**.

Configure some settings for your Internet Connection. See below for the description of each setting. Click **Next** when finished.

- **Data**: Select VCMux or LLC based on your ISP's recommended settings.

- **Encapsulation**:
  - **Country**: Select your country.
  - **ISP Provider**: Select your ISP provider from the dropdown boxes will automatically fill in the VPI and VCI numbers for you.
  - **VPI Number**: Enter the VPI number specified by your ISP.
  - **VCI Number**: Enter the VCI number specified by your ISP.
  - **MAC Address**: Click **Clone** to have your computer's MAC number automatically input.

Enter a SSID name for your wireless network and click **Next**.
Section 3 - Configuration

Select a security option for your network from WPA, WPA2, or none. Click Next.

Set a wireless security password for your network if you have selected a security option in the previous step. Click Next.

The Internet connection has now been established. Click Next to register for a mydlink account or click Connect to complete the setup.
Section 3 - Configuration

Ethernet Over ATM (RFC1483 Bridged) with NAT

**Address Mode**  Select **Static IP** if your ISP assigned you an IP address, subnet mask, gateway, and DNS server address. In most cases, select **Dynamic IP**.

**Primary/Secondary DNS Server**: Enter the Primary and secondary DNS server IP addresses assigned by your ISP.

**MAC Address**: If your ISP requires you to enter a MAC address, fill it in here. You can click the Clone MAC button to enter your current computer’s MAC address.

**MTU**: If you experience connection issues, you may need to change the MTU setting for optimal performance with your specific ISP. 1500 is the default MTU.

**Enable NAT**: Check this to enable the router to use NAT to assign IP addresses for your devices.
IP over ATM (RFC 1483 Routed)

**Address Mode**  Select **Static IP** if your ISP assigned you an IP address, subnet mask, gateway, and DNS server address. In most cases, select **Dynamic IP**.

**Primary/Secondary DNS Server**: Enter the Primary and secondary DNS server IP addresses assigned by your ISP.

**MAC Address**: If your ISP requires you to enter a MAC address, fill it in here. You can click the Clone MAC button to enter your current computer’s MAC address.

**MTU**: If you experience connection issues, you may need to change the MTU setting for optimal performance with your specific ISP. 1500 is the default MTU.

**Enable NAT**: Check this to enable the router to use NAT to assign IP addresses for your devices.
Section 3 - Configuration

PPP over Ethernet

IPv6 Dualstack: Check this box to enable IPv6/IPv4 dualstack.

Username: Enter the username for your ADSL account.

Password/Verify: Enter the password for your ADSL account, then type it again in the Verify Password box.

Service Name: You can enter a name for your service here.

IP Address: Enter the IP address assigned to you by your ISP.

Primary/Secondary DNS Server: Enter the Primary and secondary DNS server IP addresses assigned by your ISP.

MAC Address: If your ISP requires you to enter a MAC address, fill it in here. You can click the Clone MAC button to enter your current computer’s MAC address.

MTU: If you experience connection issues, you may need to change the MTU setting for optimal performance with your specific ISP. 1500 is the default MTU.

Enable NAT: Check this to enable the router to use NAT to assign IP addresses for your devices.
PPP over ATM

**Dualstack:** Check this box to enable IPv6/IPv4 dualstack.

**PPPoA Account:** Enter the username for your ADSL account.

**PPPoA Password/Verify PPPoA Password:** Enter the password for your ADSL account, then type it again in the Verify PPPoA Password box.

**Service Name:** You can enter a name for your service here.

**IP Address:** Enter the IP address assigned to you by your ISP.

**Primary/Secondary DNS Server:** Enter the Primary and secondary DNS server IP addresses assigned by your ISP.

**MTU:** If you experience connection issues, you may need to change the MTU setting for optimal performance with your specific ISP. 1500 is the default MTU.

**Enable NAT:** Check this to enable the router to use NAT to assign IP addresses for your devices.
There are no extra settings to configure when you choose this option. See the ADSL Interface page to configure the settings below.
Ethernet/3G WAN Interface

If you clicked the Setup button for Ethernet/3G WAN Interface, you will see the following settings. You can click the Setup Wizard button to use a step-by-step wizard that guides you through configuration of your WAN settings. If you are not sure what settings to use, please contact your Internet Service Provider.

**WAN Interface:** Select the WAN interface to configure, and whether to enable or disable it.

**My Internet** Select Static IP, DHCP, PPoE, PPTP, L2TP, or 3G(through a USB adapter).

**Connection Is:** Based on the setting you choose, the following settings will be different.

**Host Name:** Enter a host name to use for your connection.

The settings displayed in the middle will vary depending on what you select for the My Internet Connection Is setting. See the following pages for details.

**Multicast:** Select what multicast mode to use (Auto/IGMP v1/IGMP v2/IGMP v3), or if you want to disable it.

**IGMP Snooping:** Check this box if you want to enable IGMP Snooping.

**VLAN TAG:** To set a VLAN tag, check this box, then enter the VLAN TAG to use.
Static IP

Only use Static IP if directed to by your Internet Service Provider.

- **My Internet Connection:** Select Static IP from the drop-down menu.
- **IP Address:** Enter the IP address assigned to you by your Internet Service Provider.
- **Subnet Mask:** Enter the subnet mask assigned to you by your Internet Service Provider.
- **Default Gateway:** Enter the default gateway assigned to you by your Internet Service Provider.
- **Primary/Secondary DNS Server:** Enter the Primary and secondary DNS server IP addresses assigned by your ISP. These addresses are usually obtained automatically from your ISP. Leave at 0.0.0.0 if you did not specifically receive these from your ISP.
- **MAC Address:** The default MAC Address is set to the Internet port’s physical interface MAC address on the Broadband Router. It is not recommended that you change the default MAC address unless required by your ISP. You can use the **Clone** button to replace the Internet port’s MAC address with the MAC address of your Ethernet card.
- **MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1500 is the default MTU.
- **Enable NAT:** Check this box if you want the router to use NAT to provide IP addresses for your computers and devices. If this is disabled, your devices will need to get IP addresses from your ISP or configured individually.
Dynamic IP (DHCP)

If you are unsure what method you use to connect to the Internet, try this first. Cable modems usually use this type of connection.

**My Internet Connection:** Select **Dynamic IP (DHCP)** to obtain IP Address information automatically from your ISP. Select this option if your ISP does not give you any IP numbers to use. This option is commonly used for cable modem services.

**Primary/Secondary DNS Server:** Enter the Primary and secondary DNS server IP addresses assigned by your ISP. These addresses are usually obtained automatically from your ISP. Leave at 0.0.0.0 if you did not specifically receive these from your ISP.

**MAC Address:** The default MAC Address is set to the Internet port’s physical interface MAC address on the Broadband Router. It is not recommended that you change the default MAC address unless required by your ISP. You can use the **Clone** button to replace the Internet port’s MAC address with the MAC address of your Ethernet card.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1500 is the default MTU.

**Enable NAT:** Check this box if you want the router to use NAT to provide IP addresses for your computers and devices. If this is disabled, your devices will need to get IP addresses from your ISP or configured individually.
PPPoE (Username/Password)

Choose PPPoE (Point to Point Protocol over Ethernet) if your ISP uses a PPPoE connection. Your ISP will provide you with a username and password. This option is typically used for DSL services. Make sure to remove your PPPoE software from your computer. The software is no longer needed and will not work through a router.

My Internet Connection: Select PPPoE (Username/Password) from the drop-down menu.

Username: Enter your PPPoE username.

Password: Enter your PPPoE password and then retype the password in the next box.

Service Name: Enter the ISP Service Name (optional).

IP Address: Enter the IP address assigned to you by your Internet Service Provider.

Primary/Secondary DNS Server: Enter the Primary and secondary DNS server IP addresses assigned by your ISP. These addresses are usually obtained automatically from your ISP. Leave at 0.0.0.0 if you did not specifically receive these from your ISP.

MAC Address: The default MAC Address is set to the Internet port’s physical interface MAC address on the Broadband Router. It is not recommended that you change the default MAC address unless required by your ISP. You can use the Clone button to replace the Internet port’s MAC address with the MAC address of your Ethernet card.

MTU: Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1492 is the default MTU.

Enable NAT: Check this box if you want the router to use NAT to provide IP addresses for your computers and devices. If this is disabled, your devices will need to get IP addresses from your ISP or configured individually.
Choose PPTP (Point-to-Point-Tunneling Protocol) if your ISP uses a PPTP connection. Your ISP will provide you with a username and password. This option is typically used for DSL services.

**My Internet Connection:** Select **PPTP (Username/Password)** from the drop-down menu.

**Address Mode:** Select **Static** if your ISP assigned you the IP address, subnet mask, gateway, and DNS server addresses. In most cases, select **Dynamic**.

**PPTP IP Address:** Enter the IP address assigned to you by your Internet Service Provider.

**PPTP Subnet Mask:** Enter the subnet mask assigned to you by your Internet Service Provider.

**PPTP Gateway IP Address:** Enter the Gateway IP Address provided by your Internet Service Provider.

**PPTP Server IP Address:** Enter the Server IP provided by your Internet Service Provider.

**Username:** Enter your PPTP username.

**Password:** Enter your PPTP password and then retype the password in the next box.
Choose L2TP if your ISP uses a L2TP connection. Your ISP will provide you with a username and password. This option is typically used for DSL services.

**L2TP**

**My Internet** Select **L2TP (Username/Password)** from the drop-down menu.

**Address Mode:** Select **Static** if your ISP assigned you the IP address, subnet mask, gateway, and DNS server addresses. In most cases, select **Dynamic**.

**L2TP IP Address:** Enter the IP address assigned to you by your Internet Service Provider.

**L2TP Subnet Mask:** Enter the subnet mask assigned to you by your Internet Service Provider.

**L2TP Gateway IP Address:** Enter the Gateway IP Address provided by your Internet Service Provider.

**L2TP Server IP Address:** Enter the Server IP provided by your Internet Service Provider.

**Username:** Enter your L2TP username.

**Password:** Enter your L2TP password and then retype the password in the next box.
These settings allow you to configure the router to share a mobile Internet connection from a connected 3G USB adapter.

**Dial-Up Profile:** Select whether to try and auto-detect your 3G settings, or to manually set them up. You can click the Auto-Detection button to try and auto-detect your current settings.

- **Country/Telecom/3G Network:** If you selected Manual for Dial-Up Profile, you can enter your Country, Telecom, and 3G Network to automatically fill in some of the settings for you.

**Prefer Service Type:** Select whether to use 3G Only Mode, 2G Only Mode, or use Auto Mode to automatically switch between the two.

**Username:** Enter the username for your account (optional).

**Password:** Enter the password for your account (optional).

**Dialed Number:** Enter the dial number as given to you by your Internet Service Provider.

**Authentication:** If you selected Manual for Dial-Up Profile, you can set your authentication to Auto, PAP, or CHAP authentication.

**APN:** If you selected Manual for Dial-Up Profile, enter your APN here.

**PIN Code:** If you selected Manual for Dial-Up Profile, enter your PIN code here.

**Primary/Secondary DNS Server:** Enter the Primary and secondary DNS server IP addresses assigned by your ISP. These addresses are usually obtained automatically from your ISP. Leave at 0.0.0.0 if you did not specifically receive these from your ISP.

**Keep Alive:** You can select whether you want to use a keep alive method to keep your connection active.
Section 3 - Configuration

If you select **Use Ping**, enter the ping interval and address to ping.

If you select **Use LCP Echo Request**, enter the **lcp echo interval** and **lcp failure** limit.

**Ping Test:** Checking this box will enable ping testing, and you can set the ping interval, address, and packet size using the corresponding text boxes.

**Enable NAT:** Check this box if you want the router to use NAT to provide IP addresses for your computers and devices. If this is disabled, your devices will need to get IP addresses from your ISP or configured individually.

**Country/ISP Provider:** You can select your country and Internet Service Provider to automatically fill in the necessary **Multicast** and **IGMP Snooping** settings.
Wireless Settings

If you want to configure the wireless settings on your router using a guided wizard, click **Wireless Connection Setup Wizard**.

Click **Wi-Fi Protected Setup** if you want to add a wireless device using Wi-Fi Protected Setup (WPS).

If you want to manually configure the wireless settings on your router, click **Manual Wireless Connection Setup** and refer to the next page.
Wireless Connection Setup Wizard

The Wireless Connection Setup Wizard is designed to guide you through a step-by-step process to configure your wireless network.

Type your desired wireless network name (SSID), then click **Next**.

Choose what level of wireless security you want to use. It is highly recommended that you select **BEST**. Click **Next** to continue.

Based on the level of wireless security you chose, you will need to enter a password for your wireless network. Click **Next** to continue.

Wireless setup is now complete. Click **Save** to save your settings and complete the setup process.
Wi-Fi Protected Setup

If you clicked on the Wi-Fi Protected Setup button on the Wireless Setup page, you will see this screen. The Wi-Fi Protected Setup page allows you to create a wireless connection between your router and a device automatically by simply pushing a button or entering a PIN code.

You can also use Windows 7 to do initial configuration of your router by using the Connect to a network wizard in Windows, and entering the WPS PIN/AP PIN of the router when prompted. After modifying any settings, click Save Settings to save your changes.

**WPS:** Select whether you would like to enable or disable WPS features.

**AP PIN (also known as WPS PIN):** If you use Windows 7’s Connect to a network wizard to do initial configuration of the router, you will need to enter the WPS PIN/AP PIN into the wizard when prompted. The factory default WPS PIN/AP PIN is printed on a label located on the bottom of the router. You can click the Generate New PIN button to change it to a randomly generated PIN.

**Config Mode:** Select whether the WPS config mode should be set to Registrar or Enrollee. In most cases, this should be set to Registrar so that you can use WPS to connect new wireless clients.

**Config Status:** If this is set to CONFIGURED, the router will be marked as “already configured” to computers that try to use WPS configuration, such as Windows 7’s Connect to a network wizard. You can click the Release button to change the status to UNCONFIGURED to allow for WPS configuration of the router.

**Config Method:** If this is set to UNCONFIGURED, you can click the Set button to change the status to CONFIGURED to block WPS configuration of the router.

**WPS Status:** This lets you choose whether to use the Push Button connection method (PBC) or PIN method to connect to a wireless client when the Trigger button is clicked. If you choose the PIN method, you will need to enter an 8-digit PIN number that the wireless client need to use to connect to your router.

This will show the current WPS connection process status. Click the Trigger button to initiate a WPS connection.
Manual Wireless Settings

If you clicked **Manual Wireless Network Setup** on the **Wireless Settings** page, you will see this screen. Here, you can configure the wireless network settings of your router. After making your changes, click the **Save Settings** button.

**Enable** Wireless: Check the box to enable the wireless function. If you do not want to use wireless, uncheck the box to disable all the wireless functions.

**Wireless Network Name (SSID):** Service Set Identifier (SSID) is the name of your wireless network. Create a name for your wireless network using up to 32 characters. The SSID is case-sensitive.

**Auto Channel Scan:** The Auto Channel Scan setting can be selected to allow the DSL-2770L to choose the channel with the least amount of interference.

**Wireless Channel:** Indicates the channel setting for the DSL-2770L. By default, the channel is set to 6. The Channel can be changed to fit the channel setting for an existing wireless network or to customize the wireless network. If you enable Auto Channel Scan, this option will be greyed out.

**802.11 Mode:** Select one of the following:

- **B/G Mixed** - Select if you are using both 802.11g and 802.11b wireless clients.
- **N Only** - Select only if all of your wireless clients are 802.11n.
- **B/G/N Mixed** - Select if you are using a mix of 802.11n, 802.11g, and 802.11b wireless clients.

**Transmission Rate:** Select a transmission rate to use. It is recommended that you leave this at the default setting of **Best**.

**Visibility Status:** Select **Invisible** if you do not want the SSID of your wireless network to be broadcasted by the DSL-2770L. If Invisible is selected, the SSID of the DSL-2770L will not be seen by Site Survey utilities so your wireless clients will have to know the SSID of your DSL-2770L in order to connect to it.

**AP Isolation:** Enabling AP Isolation prevents wireless clients from being able to communicate with one another. This can be useful when providing an Internet connection for many wireless clients, but keeping their traffic and devices private from other users.
Here, you can select between None, WEP, WPA-Personal, and WPA-Enterprise. Refer to the following pages for details on configuring the different security modes. Please note that using WEP encryption will limit wireless use to 802.11g/b only, as it is incompatible with 802.11n.

If you select **WEP** as your Security Mode:

**WEP Encryption**: Select an encryption level and key length to use. This will also set the type and length of the key you will need to enter.

**Default WEP Key**: Select which WEP key should be used as default.

**WEP Key**: Enter the password(key) for your wireless network. You can use the dropdown box to choose whether you want to create a password using **HEX** or **ASCII** characters. It will need to match the requirements for the WEP Key Length as shown.

If you select **WPA-Personal** as your Security Mode:

**WPA Mode**: Select whether to use WPA, WPA2, or both WPA and WPA2 for your wireless network.

**Cipher Type**: Choose whether to use **TKIP**, **AES**, or both **TKIP and AES** ciphers for your wireless network.

**Group Key Update Interval**: You can set the Group Key Update Interval here, if necessary.

**Pre-Shared Key**: Enter the password(key) for your wireless network.
If you select **WPA-Enterprise** as your Security Mode:

**WPA Mode:** Select whether to use WPA, WPA2, or both WPA and WPA2 for your wireless network.

**Cipher Type:** Choose whether to use TKIP, AES, or both TKIP and AES ciphers for your wireless network.

**Group Key Update Interval:** You can set the Group Key Update Interval here, if necessary.

**Authentication Timeout:** Enter the authentication timeout in seconds.

**RADIUS Server IP Address:** Enter your RADIUS server IP address.

**RADIUS Server Port:** Enter your RADIUS server port.

**RADIUS Server Shared Secret:** Enter your RADIUS server shared secret.
Section 3 - Configuration

LAN Setup

This section will allow you to change the local network settings of the router and to configure the DHCP settings.

Router Settings

This section will allow you to configure the router settings.

**Router IP Address:** Enter the IP address of the router. The default IP address is 192.168.1.1.

If you change the IP address, once you click Save Settings, you will need to enter the new IP address in your browser to get back into the configuration utility.

**Subnet Mask:** Enter the Subnet Mask. The default subnet mask is 255.255.255.0.
DHCP Server Settings (Optional)

DHCP stands for Dynamic Host Control Protocol. The DSL-2770L has a built-in DHCP server. The DHCP Server will automatically assign an IP address to the computers on the LAN/private network. Be sure to set your computers to be DHCP clients by setting their TCP/IP settings to "Obtain an IP Address Automatically." When you turn your computers on, they will automatically load the proper TCP/IP settings provided by the DSL-2770L. The DHCP Server will automatically allocate an unused IP address from the IP address pool to the requesting computer. You must specify the starting and ending address of the IP address pool.

Enable DHCP Server: Check this box to enable the DHCP server on your router. Uncheck to disable this function.

DHCP IP Address Range: Enter the starting and ending IP addresses for the DHCP server’s IP assignment.

Note: If you statically (manually) assign IP addresses to your computers or devices, make sure the IP addresses are outside of this range or you may have an IP conflict.

DHCP Lease Time: The length of time for the IP address lease. Enter the Lease time in minutes.

DHCP Relay: Check the box to allow the DSL-2770L to act as a DHCP relay.

DHCP Server IP Address: If DHCP Relay is enabled, enter the IP address of the DHCP server to relay.
Add DHCP Reservation

If you want a computer or device to always have the same IP address assigned, you can create a DHCP reservation. The router will assign the IP address only to that computer or device.

**Note:** This IP address must be within the DHCP IP Address Range.

- **DHCP Reservations List:** Displays any reservation entries. Displays the host name (name of your computer or device), MAC Address, and IP address.
  - Click **Add** to create a new DHCP reservation. Select an existing reservation and click **Edit** to change its settings, or click **Delete** to remove the reservation.
  - **Enable:** After clicking **Add** or **Edit**, the following settings are available:
    - **IP Address:** Enter the IP address you want to assign to the computer or device. This IP Address must be within the DHCP IP Address Range.
    - **MAC Address:** Enter the MAC address of the computer or device. If you want to assign an IP address to the computer you are currently on, click the **Clone** button to automatically fill in the MAC address.

- **Dynamic DHCP Clients:** Displays a list of clients currently using dynamic DHCP and their names, MAC addresses, IP addresses, and reservation time remaining.

![](DHCP Reservations List.png)

![](Add/Edit DHCP Reservation.png)

![](Number of Dynamic DHCP Clients.png)
Time and Date

The Time Configuration option allows you to configure, update, and maintain the correct time on the internal system clock. From this section you can set the time zone that you are in and set the Time Server. Daylight Saving can also be configured to automatically adjust the time when needed.

**Automatically synchronize with Internet time server:** When enabled, the router will automatically update its time by using an Internet time server. Alternatively, you can disable this option and manually set the time.

**NTP Server Used:** Enter the IP address of a NTP server or select one from the drop-down menu.

**Current Router Time:** Displays the current date and time of the router.

**Time Zone:** Select your Time Zone from the drop-down menu.

**Enable Daylight Saving:** To select Daylight Saving time manually, select enabled or disabled, and enter a start date and an end date for daylight saving time.

**Date and Time:** If Automatically synchronize with Internet time server is disabled, You can manually input the time. Enter the values in these fields for the Year, Month, Day, Hour, Minute, and Second and then click **Set Time**.

You can also click **Copy Your Computer’s Time Settings** to sync the date and time with the computer you are currently on.
IPv6

On this page, you can configure the IPv6 Connection type and settings.

IPv6: Enable or disable IPv6 for your router.

IPv6 Connection: If you wish to use IPv6, choose your IPv6 connection type:
- Static IPv6
- DHCPv6
- PPPoE
- 6 to 4
- IPv6 in IPv4 Tunnel
- PPPoA

Based on the connection type you choose, the following settings will change. Refer to the following pages for more details.
Static IPv6

IPv6 Address: Enter the address settings supplied by your Internet provider (ISP).

Subnet Prefix Length: Enter a subnet prefix length.

Default Gateway: Enter the default gateway for your IPv6 connection.

Primary/Secondary DNS Address: Enter the primary and secondary DNS server addresses.

LAN IPv6 Address: Enter the LAN (local) IPv6 address for the router.

LAN Link-Local Address: Displays the router’s LAN Link-Local Address.

Autoconfiguration: Enable or disable the autoconfiguration feature.

Autoconfiguration Type: Choose either Stateless or Stateful(DHCPv6) from the drop-down menu.

Router Advertisement Lifetime: Enter the IPv6 Address Lifetime (in minutes).
DHCPv6

**Primary/Secondary DNS Address:** Enter the primary and secondary DNS server addresses.

**LAN IPv6 Address:** Enter the LAN (local) IPv6 address for the router.

**LAN Link-Local Address:** Displays the router's LAN Link-Local Address.

**Autoconfiguration:** Enable or disable the autoconfiguration feature.

**Autoconfiguration Type:** Choose either **Stateless** or **Stateful (DHCPv6)** from the drop-down menu.

**Router Advertisement Lifetime:** Enter the IPv6 Address Lifetime (in minutes).
PPPoE

**Username:** Enter your PPPoE user name.

**Password:** Enter your PPPoE password.

**Service Name:** Enter the ISP Service Name.

- **MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1492 is the default MTU.

**LAN IPv6 Address:** Enter the LAN (local) IPv6 address for the router.

**LAN Link-Local Address:** Displays the router’s LAN Link-Local Address.

**Autoconfiguration:** Enable or disable the autoconfiguration feature.

**Autoconfiguration Type:** Choose either **Stateless** or **Stateful(DHCPv6)** from the drop-down menu.

**Router Advertisement Lifetime:** Enter the IPv6 Address Lifetime (in minutes).
6 to 4

6 to 4 Address: Your 6 to 4 address will be shown here.

Primary/Secondary DNS Address: Enter the primary and secondary DNS server addresses.

LAN IPv6 Address: Enter the LAN (local) IPv6 address for the router.

LAN Link-Local Address: Displays the router’s LAN Link-Local Address.

Autoconfiguration: Enable or disable the autoconfiguration feature.

Autoconfiguration Type: Choose either Stateless or Stateful(DHCPv6) from the drop-down menu.

Router Advertisement Lifetime: Enter the IPv6 Address Lifetime (in minutes).
IPv6 in IPv4 Tunneling

**Remote IPv4 Address:** Enter the IPv4 remote address you will use.

**Local IPv4 Address:** Enter the IPv4 local address you will use.

**Local IPv6 Address:** Enter the IPv6 local address you will use.

**Primary/Secondary DNS Address:** Enter the primary and secondary DNS server addresses.

**LAN IPv6 Address:** Enter the LAN (local) IPv6 address for the router.

**LAN Link-Local Address:** Displays the router’s LAN Link-Local Address.

**Autoconfiguration:** Enable or disable the autoconfiguration feature.

**Autoconfiguration Type:** Choose either **Stateless** or **Stateful (DHCPv6)** from the drop-down menu.

**Router Advertisement Lifetime:** Enter the IPv6 Address Lifetime (in minutes).
Section 3 - Configuration

**PPPoA**

**Username:** Enter your PPPoA user name.

**Password:** Enter your PPPoA password.

**Service Name:** Enter the ISP Service Name.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1492 is the default MTU.

**LAN IPv6 Address:** Enter the LAN (local) IPv6 address for the router.

**LAN Link-Local Address:** Displays the router's LAN Link-Local Address.

**Autoconfiguration:** Enable or disable the autoconfiguration feature.

**Autoconfiguration Type:** Choose either **Stateless** or **Stateful(DHCPv6)** from the drop-down menu.

**Router Advertisement Lifetime:** Enter the IPv6 Address Lifetime (in minutes).
USB Services

From this screen, you can set up various settings related to sharing files on a USB storage drive plugged into the DSL-2770L.

**Disk Utility:** Click the Disk Utility button for settings on formatting and checking a connected USB storage drive, and to view its current usage and capacity.

**File Sharing:** Click the File Sharing button for settings used for sharing a connected USB storage drive on your network through SAMBA.

**Access Control:** Click the Access Control button for settings on creating and modifying user accounts to control file access to the attached USB storage drive.

**iTunes Server:** Click the iTunes Server button for settings for the iTunes server function of the DSL-2770L.

**Download Assistant:** Click the Download Assistant button to add new automated download tasks.

**Download Status:** Click the Download Status button to manage your download tasks.

**Web HDD:** Click the Web HDD button to access and manage files stored on your USB storage drive through your web browser.
Disk Utility

If you click Disk Utility on the NAS page, these settings will appear. Here, you can format and check a connected USB storage drive, and view its current usage and capacity.

Format This Partition:  Click this button to format the attached USB storage drive and prepare it for use. The drive will be formatted using the EXT3 file system.

Warning: Formatting your drive will delete all files and folders stored on it.

Check This Partition:  This will check the drive for errors. Please note that the drive must use the EXT3 file system in order to be checked.

Disk Total Capacity:  This shows the full capacity of the USB storage drive.
File Sharing

If you click File Sharing on the NAS page, these settings will appear. Here you can adjust the settings for sharing your USB storage over a network through SAMBA. If you click the **FTP Service Configuration** button, you can adjust the FTP server settings.

**Computer Name**: Enter the name used to identify the USB drive on the network.

**WorkGroup**: Enter the network workgroup to join for the USB drive.

**Server Comment**: Enter a comment to identify the USB drive on the network.

**FTP**: Select whether you want to enable or disable the FTP server function.

**FTP Port**: Set the port you want to use for the FTP server.

**FTP Max Connection per IP**: Set the maximum allowable connections per IP.

**FTP MAX Clients**: Set the maximum number of clients allowed to connect to the FTP server at one time.

**Client Support**

**UTF8**: Select whether to support Unicode.

**Codepage**: Select which language to use for the FTP server.
Access Control

If you click Access Control on the NAS page, these settings will appear. Here you can adjust the settings for sharing your USB storage over a network through SAMBA.

**Security Level:** Selecting **Guest mode** will allow all users to access files on the USB storage drive. Selecting **Authorization mode** will require users to enter a username and password in order to access files on the USB drive.

To set up user accounts for Authorization mode, click the **User Configuration** button.

After clicking the User Configuration button, these settings will appear:

- **Username/Password:** Enter a **Username** and **Password** for an account and click the **Add** button to create a new user.

- You can also select an existing user and click **Delete** to remove it.
iTunes Server

If you click iTunes Server on the NAS page, these settings will appear. Here you can adjust the settings for the iTunes server function.

**Service**: Select whether to enable or disable the iTunes server feature.

**Service Name**: Enter a name to identify your iTunes server.

**Service Port**: Enter which port to use for the service.

**Access Password**: If you wish to protect access your files with a password, enter it here.
Download Assistant

If you click Download Assistant on the NAS page, these settings will appear. Here you can set up download tasks for the DSL-2770L to run and download to the USB storage.

**Download Type:** Select which type of download you want to add. If you select **FTP**, you will see these settings.

- **Job Name:** Enter a name to identify the download job.
- **URL:** Enter the full FTP address and port of the file you want to download.
- **Save To:** Enter the path you want to save the file to.
- **Login Method:** Select whether to connect to the FTP server anonymously or to use a login account.
- **Username/Password:** If you select Account for your Login Method, enter the username and password for the FTP account.
- **Start Time:** You can choose to start the download task immediately by selecting **At Once**, or you can select **Schedule** and select a date and time to start the download task.

**Download Type:** If you select **HTTP**, you will see these settings.

- **Job Name:** Enter a name to identify the download job.
- **URL:** Enter the full FTP address and port of the file you want to download.
- **Save To:** Enter the path you want to save the file to.
- **Start Time:** You can choose to start the download task immediately by selecting **At Once**, or you can select **Schedule** and select a date and time to start the download task.
Clicking the **E-mail Alert Configuration** button shows these settings:

**HTTP/FTP**  Select whether you want to enable e-mail alerts when a file is transferred over HTTP/FTP.

**Download alert:** over HTTP/FTP.

**SMTP Server**  Enter the SMTP address of the e-mail account you want to send notifications from.

**Address:** Enter the SMTP address of the e-mail account you want to send notifications from.

**SMTP Server Port:** Enter the SMTP port of the e-mail account you want to send notifications from.

**SMTP UserName/Password**  Enter the username and password for the e-mail account you want to send notifications from.

**Email Address:** Enter the e-mail address you want your notifications to be sent to.

**Email Subject:** Enter the subject to use for your e-mail notifications.
Download Status

If you click Download Status on the NAS page, these settings will appear. Here you can view and manage the download tasks of the DSL-2770L. After selecting a task, you can click Pause/Resume to pause and resume a download, or you can click Start Now to start the download task.
Web HDD

If you click Web HDD on the NAS page, you can see the folders and files stored on your USB drive. Click on a folder to open it, or click the Back button to up a directory. Click Upload to upload a file to the current folder, or click a file to select it, then click Download to download the file to your computer, or click Delete to delete it from the storage drive. Click the Add Folder button and enter a folder name to create a new folder in the current folder.
SharePort Mobile

This page will allow you to set up access to files on an external USB storage drive that is plugged into the router. You can do this through local network or from the Internet using either a web browser or an app on your smartphone or tablet. You can create users that can be allowed access to these files through SharePort Mobile services accessible through a web UI or on mobile devices using the SharePort Mobile app available for iOS and Android.

Enable SharePort Web Access: Check this box if you wish to be able to access SharePort through a browser as well as the mobile app.

HTTP Access Port: Enter the port you want to use when accessing SharePort using a web browser.

Allow Remote Access: Check this box if you wish to be able to access SharePort through a web browser over the Internet.

User Creation: To give a new user access to your SharePort storage, enter a User Name and Password here. You can Add new users or choose existing users from the drop-down menu if you wish to Edit or Delete them.

Note: The Admin password is the same as the admin password for the router. The Guest password is guest and cannot be changed.

User List: This list displays all of the users with access to the SharePort Mobile content, what they can access, and their Read/Write Permissions. Click on the edit icon at the right to change home folder and access rights for the user.

Number of Devices: All devices you have set up for SharePort access will be listed here.

SharePort Web Access Link: This area will display the links to connect to your SharePort drive through a web browser from a device on your network.

---

1 Supports capacities of up to 1 TB for USB storage drives.
mydlink Settings

Devices that are mydlink-enabled can be accessed and managed through the mydlink website and by using mydlink mobile apps for iOS and Android. You cannot take advantage of these features without a mydlink account. If you have a mydlink account already, you can log in when you first set up the router, or by visiting this setup page.

**mydlink Service:** Displays whether your device is registered with a mydlink account or not.

**Register mydlink Service:** Click to go to open a wizard that will guide you through the process of registering your device to your mydlink account. If you don’t have a mydlink account yet, you will be able to create one.
Advanced
Virtual Server

This will allow you to forward a single port or a range of ports to a specific PC or device on your network.

You can automatically fill information required for some commonly used services by using the **Well known services** dropdown box at the top, selecting a rule **ID** to copy the information to, selecting a schedule rule if desired, then clicking the **Copy to** button.

**Service Ports:** Enter the external port(s) that you want to forward.

**Server IP : Port:** Enter the IP address and ports of the computer on your local network that you want to forward the specified (external) Service Ports to.

You can enter a single port or a range of ports. Separate ports with a common. Example: 24,1009,3000-4000

**Enable:** Check this box to enable the rule.

**Schedule Rule#:** Enter the schedule rule number that you want to apply to this port forwarding rule. You can create a new schedule by clicking the **Add New Rule...** button, or you can leave it blank to allow the rule to be always on.

For more details on creating schedule rules, refer to “Schedules” on page 85
Section 3 - Configuration

Application Rules

Some applications require multiple connections, such as Internet gaming, video conferencing, Internet telephony and others. These applications have difficulties working through NAT (Network Address Translation). Special Applications makes some of these applications work with the DSL-2770L. If you need to run applications that require multiple connections, specify the port normally associated with an application in the “Trigger Port” field, select the protocol type as TCP or UDP, then enter the firewall (public) ports associated with the trigger port to open them for inbound traffic.

You can automatically fill information required for some commonly used services by using the Popular applications dropdown box at the top, selecting a rule ID to copy the information to, then clicking the Copy to button.

**Trigger:** This is the port used to trigger the application. It can be either a single port or a range of ports.

**Incoming Ports:** This is the port number on the Internet side that will be used to access the application. You may define a single port or a range of ports. You can use a comma to add multiple ports or port ranges.

**Enable:** Check this box to enable the rule.
QoS Engine

The QoS Engine option helps improve your network gaming performance by prioritizing applications. By default the QoS Engine settings are disabled and application priority is not classified automatically.

**QoS:** This option is disabled by default. Enable this option for better performance and experience with online games and other interactive applications, such as VoIP.

**WAN Interface:** Select which WAN interface to adjust the QoS settings for.

- **Bandwidth of Upstream:** Enter the upstream bandwidth for your Internet connection.
- **Bandwidth of Downstream:** Enter the downstream bandwidth for your Internet connection.
- **WMM (Wi-Fi Multimedia):** Select whether you wish to enable the WMM feature, then click the **Apply WMM Settings** button.

**Wireless QoS:** Click on this button to add a Wireless QoS rule.

**LAN QoS:** Click on this button to add a LAN QoS rule.

**QoS Rules Table:** This shows a list of your current QoS rules. You can check or uncheck a rule to enable or disable it, or you can click on the **X** next to the rule to delete it.
If you clicked on **Wireless QoS** or **LAN QoS**, you will see these settings. If you want to create a compound rule (for TCPPORT, UDPPORT, or TOS only), click the **Add A Conjunction (AND) Rule** button.

**Rule:** Check the box if you want the rule to be enabled.

**Class/Class Info:** Select what criteria the rule should apply to, and enter the relevant criteria in the **Class Info** text box.

- **IP:** IP address
- **TCPPORT:** TCP port
- **UDPPORT:** UDP port
- **MAC:** MAC address
- **DSCP:** DSCP name
- **TOS:** Type of service

**Function/Function data:** Based on the Class selected, enter what you want the rule to apply to and enter the relevant information in the **Function data** text box. For example, for TCPPORT, you should enter the TCP port the rule should apply to.

- **PRI:** Set priority level
- **MAXR:** Set maximum bandwidth rate
- **MINR:** Set minimum bandwidth rate
- **SESSION:** Set connection session
- **DROP:** Drop the packet
- **LOG:** Log the event
- **ALERT:** Create an alert event

**Direction:** Set which traffic direction the rule should apply to.
Outbound Filters

The Outbound Filter option is an advanced method of controlling data sent out to the Internet. With this feature you can configure outbound data filtering rules that control data based on an IP address range. Select whether to **Allow** all traffic specified by your rules to pass, or to **Deny** all traffic specified by your rules.

**Source IP:Ports:** Enter the starting IP address and ports from your network. Enter 0.0.0.0 if you do not want to specify an IP range.

**Destination IP:Ports:** Enter the ending IP address and ports outside your network. Enter 255.255.255.255 if you do not want to specify and IP range.

**Enable:** Check this box to enable the rule.

**Schedule Rule #:** Enter the schedule rule number that you want to apply to this port forwarding rule. You can create a new schedule by clicking the **Add New Rule**... button, or you can leave it blank to allow the rule to be always on.

For more details on creating schedule rules, refer to “Schedules” on page 85
Inbound Filters

The Inbound Filter option is an advanced method of controlling data received from the Internet. With this feature you can configure inbound data filtering rules that control data based on an IP address range. Select whether to Allow all traffic specified by your rules to pass, or to Deny all traffic specified by your rules.

**Source IP:Ports:** Enter the starting IP address and ports from outside your network. Enter 0.0.0.0 if you do not want to specify an IP range.

**Destination IP:Ports:** Enter the ending IP address and ports inside your network. Enter 255.255.255.255 if you do not want to specify and IP range.

**Enable:** Check this box to enable the rule.

**Schedule Rule#:** Enter the schedule rule number that you want to apply to this port forwarding rule. You can create a new schedule by clicking the Add New Rule... button, or you can leave it blank to allow the rule to be always on.

For more details on creating schedule rules, refer to “Schedules” on page 85.
Wireless Filter

The Wireless Filter feature allows you to limit wireless access to your network based on a device’s MAC address.

**Enable Wireless Mac Filtering:** Check this box to enable wireless filtering by MAC address. Select whether to **Allow** access to all computers specified, or to **Deny** access to all computers specified.

**Filter Name:** Enter a name for the filter rule.

**Wireless MAC Address:** Enter the MAC address of the wireless device you want to filter.

Click the **Add/Apply** button to save your changes and apply your settings.
DNS Setup

The DDNS feature allows you to host a server (Web, FTP, or Game Server) using a domain name that you have purchased (such as www.exapledomain.com) with your dynamically assigned IP address. You can use one of the listed DDNS service, or you can sign up for D-Link’s free DDNS service at www.dlinkddns.com. After modifying any settings, click Save Settings to save your changes.

**DDNS:** Tick this checkbox to enable the DDNS feature.

**Provider:** Select a DDNS service provider to use.

**Host Name:** Enter the Host Name that you registered with your DDNS service provider.

**Username / E-mail:** Enter the Username for your DDNS account.

**Password / Key:** Enter the Password for your DDNS account.
Firewall & DMZ

A firewall protects your network from the outside world. The DSL-2770L offers a firewall type functionality. The SPI feature helps prevent cyber attacks. Sometimes you may want a computer exposed to the outside world for certain types of applications. If you choose to expose a computer, you can enable DMZ. DMZ is short for Demilitarized Zone. This option will expose the chosen computer completely to the outside world.

**Enable SPI:** SPI (Stateful Packet Inspection, also known as dynamic packet filtering) helps to prevent cyber attacks by tracking more state per session. It validates that the traffic passing through the session conforms to the protocol.

**Enable DMZ:** If an application has trouble working from behind the router, you can expose one computer to the Internet and run the application on that computer.

**Note:** Placing a computer in the DMZ may expose that computer to a variety of security risks. Use of this option is only recommended as a last resort.

**DMZ IP Address:** Specify the IP address of the computer on the LAN that you want to have unrestricted Internet communication. If this computer obtains it’s IP address automatically using DHCP, be sure to make a static reservation on the *Setup > Network Settings* page so that the IP address of the DMZ machine does not change.
Advanced Internet

This screen lets you add or remove PVC settings and select your ADSL mode. It is recommended that you only change settings on this page as directed by your service provider.

**Multiple PVC Settings:** This shows you your current PVC settings. You can click the **Add** button to add a new PVC setting, click the **Edit** button for a PVC setting to edit it, or tick the checkbox next to a setting and click **Delete** to remove it.

**Advanced ADSL Settings:** Select which ADSL mode to use.

![Advanced ADSL Settings](image)
Advanced Wireless

This page allows you to change some of the advanced wireless settings of the DSL-2770L. It is recommended that you only change these settings if you are familiar with their functions and proper settings, or are instructed to do so.

Beacon Interval: Specify a value for the beacon interval. Beacons are packets sent by an Access Point to synchronize a wireless network. 100 is the default setting and is recommended.

Transmit Power: Set the transmit power of the antennas.

RTS Threshold: This value should remain at its default setting of 2347. If inconsistent data flow is a problem, only a minor modification should be made.

Fragmentation: The fragmentation threshold, which is specified in bytes, determines whether packets will be fragmented. Packets exceeding the 2346 byte setting will be fragmented before transmission. 2346 is the default setting.

DTIM Interval: Set the interval for DTIM. A Delivery Traffic Indication Message (DTIM) is a countdown informing clients of the next window for listening to broadcast and multicast messages. The default interval is 3.

WMM Capable: WMM (Wi-Fi Multimedia) is a QoS (Quality of Service) system for your wireless network. Enable this option to improve the quality of video and voice applications for your wireless clients.

TX Rates: Select the basic transfer rates based on the speed of wireless adapters on your wireless network. It is strongly recommended to keep this setting to Auto.

Guest Wireless Settings: Here, you can set up a Wireless Guest Network, which will provide access to the Internet, but not to your network devices. To use this feature, tick the **Enable Wireless Guest Network** checkbox. For more details, refer to “Wireless Settings” on page 34.
Advanced LAN

Advanced LAN contains settings which can change the way the router handles certain types of traffic. We recommend that you do not change any of these settings unless you are already familiar with them or have been instructed to make the change by one of our support personnel. After modifying any settings, click **Save Settings** to save your changes.

**Enable UPnP:** Tick this checkbox to use the Universal Plug and Play (UPnP™) feature. UPNP provides compatibility with various networking equipment, software, and peripherals.

**Enable WAN Ping**
**Respond:** Select the box to allow the WAN port to be “pinged.” Blocking WAN pings may provide some extra security from hackers.
Port Mapping

This page allows you to configure port mapping settings for both the Ethernet ports and wireless APs.

**LAN VLAN Settings**: Enter the VID you want to use for each Ethernet port, as well as whether you want to apply Tx tagging for the port.

**Wireless LAN VLAN Settings-AP**: Enter the VID you want to use for each wireless AP, as well as whether you want to apply Tx tagging for the port.

**WAN VLAN Settings**: Click this button to configure settings for each VID.

If you click on the **WAN VLAN Settings** button, these settings will appear:

- **VID**: Enter the VID you want to edit.
- **Routing Type**: Select what routing type to use, NAT or Bridge.
- **DHCP Setting**: If you select NAT, this will be DHCP by default.
- **WAN Type**: If you select Bridge, select which WAN to use.
- **WAN Map VLAN ID**: If you select Bridge, enter the VLAN ID to use.
SNMP Setup

This page allows you to configure the SNMP settings for remote management of this device.

**SNMP Local:** Set whether you want to enable local SNMP access for the router.

**SNMP Remote:** Set whether you want to enable remote SNMP access for the router.

**Get Community:** Enter the community that the router will respond to for GetRequests.

**Set Community:** Enter the community that the router will accept for SetRequests.

**IP 1/2/3/4:** Enter the IP addresses of the PCs you will use for SNMP management.

**SNMP Version:** Enter the SNMP version to use.

**WAN Access IP Address:** If you want to limit SNMP access to a specific PC/IP address only, enter the IP address here. By default, this is set to 0.0.0.0 and allows any computer to have SNMP access.
Remote Management

This page allows you to configure the remote management settings of this device.

**Enable Remote Management:** Tick this box to enable remote management. This will allow you to access the web configuration interface remotely through the Internet. This may require you to know your IP address or set up DDNS.

**IP Allowed to Access:** Enter the IP address you want to allow remote access from. By default, this is set to 0.0.0.0, which will allow access any computer on the Internet.

**Port:** Set which port you want to use for remote access.
Routing

The Routing page allows you to specify custom routes that determine how data is moved around your network. After modifying any settings, click **Save Settings** to save your changes.

**RIP:** Select this box to enable routing, then select which routing protocol to use:
- **RIPv1:** Protocol in which the IP address is routed through the internet.
- **RIPv2:** Enhanced version of RIPv1 with added features such as Authentication, Routing Domain, Next Hop Forwarding, and Subnet-mask Exchange.

**ID:** This identifies the rule.

**Destination:** Enter in the IP of the specified network that you want to access using the static route.

**Subnet Mask:** Enter in the subnet mask to be used for the specified network.

**Gateway:** Enter in the gateway IP address for the specified network.

**Hop:** Enter in the amount of hops it will take to reach the specified network.

Note: In a transmission path, each link is terminated at a network device such as a router or gateway. The number of hops equals the number of routers or gateways that data must pass through before reaching the destination.

**Enable:** Select this box to enable the rule.
IPV6 Firewall

This page lets you adjust the IPV6 firewall settings to control IPV6 traffic allowed in and out of your network. After modifying any settings, click **Save Settings** to save your changes.

**Configure IPV6 Filtering Below:**

- **Turn IPV6 Filtering OFF**
- **Turn IPV6 Filtering ON and ALLOW computers listed to access the network** (all computers not specified will be denied access)
- **Turn IPV6 Filtering ON and DENY computers listed to access the network** (all computers not specified will be allowed access)

For each rule, tick the checkbox on the left to enable the rule.

**Name:** Enter a name for the rule.

**Schedule:** Select whether to have the rule active **Always, Never**, or according to a schedule you have created. For more about creating schedules, refer to page 85.

**Source:** Enter the starting IP address of the traffic you want to filter.

**Dest:** Enter the ending IP address of the traffic you want to filter.

**Protocol:** Enter which protocol you want to filter.

**Port Range:** Enter the port range of the traffic you want to filter.
Budget Quota

This page lets you set quotas for how much traffic is allowed to pass through the network. This may be useful to control usage if there is a bandwidth cap in place.

**Enable Limitation Quota:**
Tick this box to enable quotas.

**Select Interface:**
Select which interface to apply the budget quota to.

**Limit Time(Days):**
Enter the period of time to apply the budget quota to. After the time limit has passed, the quota will reset.

**Enable Download Quota:**
Tick this box to enable download quotas.

**Download Quota:**
Set the maximum allowed download amount in megabytes for the period of time specified in **Limit Time**.

**Enable Upload Quota:**
Tick this box to enable upload quotas.

**Upload Quota:**
Set the maximum allowed upload amount in megabytes for the period of time specified in **Limit Time**.

**Traffic Information:**
This shows your current received and transmitted traffic totals so far. You can click the **Refresh** button to update the totals. Please note that the totals update every three minutes.
Tools
Password

This page will allow you to change the password used to log in to the web configuration interface.

**Current/ New/Confirm Password:** To change the password, enter the current password, then the new password you want to use, then enter it again to confirm it, then click **Apply Settings** to save your changes.

**Session Idle Time Out:** Set the idle time in seconds that are allowed before the web configuration interface automatically logs out the user.

**Enable CAPTCHA:** Enables a challenge-response test to require users to type letters or numbers from a distorted image displayed on the screen to prevent online hackers and unauthorized users from gaining access to your router’s network settings.
Save/Restore Settings

This section allows you to manage the router’s configuration settings, reboot the router, and restore the router to the factory default settings. Restoring the unit to the factory default settings will erase all settings, including any rules that you’ve created.

**Save Settings to Local Hard Drive:** Use this option to save the current router configuration settings to a file on the hard disk of the computer you are using. First, click the **Save** button. A file dialog will appear, allowing you to select a location and file name for the settings.

**Load Settings from Local Hard Drive:** Use this option to load previously saved router configuration settings. First, use the **Browse** option to find a previously saved file of configuration settings. Then, click the **Load** button to transfer those settings to the router.

**Restore to Factory Default Settings:** This option will restore all configuration settings back to the settings that were in effect at the time the router was shipped from the factory. Any settings that have not been saved will be lost, including any rules that you have created. If you want to save the current router configuration settings, use the **Save** button above.
Firmware Update

You can upgrade the firmware of the access point here. Make sure the firmware you want to use is on the local hard drive of the computer. Please check the D-Link support website for firmware updates at http://support.dlink.com. You can download firmware upgrades to your hard drive from this site.

**Upload**: After you have downloaded the new firmware, click **Browse**... to locate the firmware update on your hard drive. Click **Upload** to complete the firmware upgrade.

**Accept Unofficial Firmware**: Tick this box to allow unofficial firmware to be loaded onto the device. Please note that this is not recommended, and any damage caused by an unofficial firmware may invalidate your product warranty.
Ping Test

**Ping Test:** The Ping Test is used to send Ping packets to test if a computer is on the Internet. Enter the IP address that you wish to Ping and click **Ping**.

**Ping Results:** The results of your ping attempts will be displayed here.
System Log

The router keeps a running log of events and activities occurring on the router. You may send these logs to a SysLog server on your network.

**Log Types:** Tick the checkboxes to indicate whether you want to log events related to the System, Attacks, Dropped packets or connections, or Debug information.

**Enable E-mail Notification:** Tick this box if you want to send event notifications to your e-mail address.

**To E-mail Address:** Enter the e-mail address you want to send notifications to.

**E-mail Subject:** Enter the e-mail subject to be used for the e-mail notifications.

**SMTP Server/IP Address:** Enter the SMTP server to use, or the IP address of the SMTP server.

**SMTP Server Port:** Enter the port of the SMTP server to use.

**Enable Authentication:** If your SMTP server requires authentication, tick this checkbox.

**Account Name:** Enter your SMTP account name.

**Account/Verify Password:** Enter your SMTP account password, then enter it again to verify it.
Section 3 - Configuration

Schedules

Schedules can be created for use with enforcing rules. For example, if you want to restrict web access to Mon-Fri from 3pm to 8pm, you could create a schedule selecting Mon, Tue, Wed, Thu, and Fri and enter a Start Time of 3pm and End Time of 8pm.

Schedule Rules  The list of schedules will be listed here. Click the Edit icon to make changes or click the Delete icon to remove the schedule.

Name: Enter a name for your new schedule.

Day(s): Select a day, a range of days, or All Week to include every day.

Time Format: Choose a 24 hour or 12 hour clock-style.

Start Time: Enter a start time for your schedule.

End Time: Enter an end time for your schedule.
Status

Device Info

This page displays the current information for the DSL-2770L. It will display the LAN, WAN (Internet), and Wireless information. If your Internet connection is set up for a Dynamic IP address, then a **Release** button and a **Renew** button will be displayed. Use **Release** to disconnect from your ISP and use **Renew** to connect to your ISP. If your Internet connection is set up for PPPoE, a **Connect** button and a **Disconnect** button will be displayed. Use **Disconnect** to drop the PPPoE connection and use **Connect** to establish the PPPoE connection.

- **General**: Displays the router’s time and firmware version.
- **Select IPv4 Multi**: Use this dropdown box to select a connection to show information about.
- **WAN Type**: about.
- **WAN**: Displays the MAC address and the public IP settings of the currently selected WAN type.
- **Wireless LAN**: Displays the wireless MAC address and your wireless settings such as SSID and Channel.
- **LAN**: Displays the MAC address and the private (local) IP settings for the router.
Routing Info

This page will display your current routing table.
Section 3 - Configuration

IPv6 Status

The IPv6 page displays a summary of the Router’s IPv6 settings and lists the IPv6 address and host name of any IPv6 clients.
Support

The Support pages let you jump to descriptions of the settings and their functions.
D-Link SharePort

D-Link SharePort™ allows you to share a USB multifunction printer with other users across your network by simply connecting the device to select D-Link routers. This allows you to use a printer located across your network as if it were connected to your local PC.

System Requirements

- Pentium 3 800 MHz or better
- 256 MB RAM or higher
- CD-ROM drive
- Compatible D-Link router

Installation

1. Insert the CD-ROM into your computer.

2. Follow the on-screen instructions.

3. The icon should appear in the System Tray at the lower-right corner on your desktop.

Set Up the D-Link Router

1. Connect the D-Link Router to the network.

3. Double-click on the icon to open D-Link SharePort.

4. Right-click on the icon in the System Tray at the lower-right corner on your Windows Desktop. A window will pop up to display the D-Link Router.
Enable Network USB on the D-Link Router

1. Click on the D-Link Router in D-Link SharePort.
2. Click **Enable**.
3. The 📡 icon in the Windows System Tray should change to a 📡 icon.

Connect a USB Printer to the D-Link Router

D-Link SharePort automatically detects each connected USB device. A window will pop up for each detected USB device.

1. Right-click the 📡 icon.
2. Click **Open SharePort**.
   D-Link SharePort will display the connected USB printer on the network.
3. Move your mouse cursor to Waiting to Connect and click **Manage Device**.
4. Click Yes for the question “Do you want to install the printer software or MFP utility?”
5. Insert the printer’s CD-ROM and follow the instructions to install the printer’s driver. When the installation process prompts you to connect the multifunction printer to your PC, click **Next**.
6. D-Link SharePort will virtually connect to the printer. Click **Next**.
7. Choose the printer’s driver that you want D-Link SharePort to auto-connect to when you print.
Connect a Wireless Client to your Router

WPS Button

The easiest and most secure way to connect your wireless devices to the router is WPS (Wi-Fi Protected Setup). Most wireless devices such as wireless adapters, media players, Blu-ray DVD players, wireless printers and cameras will have a WPS button (or a software utility with WPS) that you can press to connect to the DSL-2770L router. Please refer to your user manual for the wireless device you want to connect to make sure you understand how to enable WPS. Once you know, follow the steps below:

**Step 1** - Press the WPS button on the DSL-2770L for about 1 second. The Internet LED on the front will start to blink.

**Step 2** - Within 2 minutes, press the WPS button on your wireless client (or launch the software utility and start the WPS process).

**Step 3** - Allow up to 1 minute while your connection is configured. Once the Internet light stops blinking, you will be connected and your wireless connection will be secure with WPA2.
Windows® 7
WPA/WPA2

It is recommended to enable wireless security (WPA/WPA2) on your wireless router or access point before configuring your wireless adapter. If you are joining an existing network, you will need to know the security key or passphrase being used.

1. Click on the wireless icon in your system tray (lower-right corner).

2. The utility will display any available wireless networks in your area.
3. Highlight the wireless connection with Wi-Fi name (SSID) you would like to connect to and click the **Connect** button.

   If you get a good signal but cannot access the Internet, check your TCP/IP settings for your wireless adapter. Refer to the Networking Basics section in this manual for more information.

4. The following window appears while your computer tries to connect to the router.
5. Enter the same security key or passphrase (Wi-Fi password) that is on your router and click **Connect**. You can also connect by pushing the WPS button on the router.

It may take 20-30 seconds to connect to the wireless network. If the connection fails, please verify that the security settings are correct. The key or passphrase must be exactly the same as on the wireless router.
WPS

The WPS feature of the DSL-2770L can be configured using Windows® 7. Carry out the following steps to use Windows® 7 to configure the WPS feature:

1. Click the **Start** button and select **Computer** from the Start menu.

2. Click **Network** on the left side.
3. Double-click the DSL-2770L.

4. Input the WPS PIN number (displayed in the WPS window on the Router’s LCD screen or in the **Setup > Wireless Setup** menu in the Router’s Web UI) and click **Next**.
5. Type a name to identify the network.

6. To configure advanced settings, click the icon.

Click **Next** to continue.
7. The following window appears while the Router is being configured.

   Wait for the configuration to complete.

8. The following window informs you that WPS on the router has been setup successfully.

   Make a note of the security key as you may need to provide this security key if adding an older wireless device to the network in the future.

9. Click **Close** to complete WPS setup.
Windows Vista®

Windows Vista® users may use the built-in wireless utility. If you are using another company’s utility, please refer to the user manual of your wireless adapter for help with connecting to a wireless network. Most utilities will have a “site survey” option similar to the Windows Vista® utility as seen below.

If you receive the **Wireless Networks Detected** bubble, click on the center of the bubble to access the utility.

or

Right-click on the wireless computer icon in your system tray (lower-right corner next to the time). Select **Connect to a network**.

The utility will display any available wireless networks in your area. Click on a network (displayed using the SSID) and click the **Connect** button.

If you get a good signal but cannot access the Internet, check you TCP/IP settings for your wireless adapter. Refer to the **Networking Basics** section in this manual for more information.
WPA/WPA2

It is recommended to enable wireless security (WPA/WPA2) on your wireless router or access point before configuring your wireless adapter. If you are joining an existing network, you will need to know the security key or passphrase being used.

1. Open the Windows Vista® Wireless Utility by right-clicking on the wireless computer icon in your system tray (lower right corner of screen). Select Connect to a network.

2. Highlight the Wi-Fi name (SSID) you would like to connect to and click Connect.
3. Enter the same security key or passphrase (Wi-Fi password) that is on your router and click Connect.

It may take 20-30 seconds to connect to the wireless network. If the connection fails, please verify that the security settings are correct. The key or passphrase must be exactly the same as on the wireless router.
WPS/WCN 2.0

The router supports Wi-Fi protection, referred to as WCN 2.0 in Windows Vista®. The following instructions for setting this up depends on whether you are using Windows Vista® to configure the router or third party software.

When you first set up the router, Wi-Fi protection is disabled and unconfigured. To enjoy the benefits of Wi-Fi protection, the router must be both enabled and configured. There are three basic methods to accomplish this: use Windows Vista's built-in support for WCN 2.0, use software provided by a third party, or manually configure.

If you are running Windows Vista®, log into the router and click the Enable checkbox in the Basic > Wireless section. Use the Current PIN that is displayed on the Advanced > Wi-Fi Protected Setup section or choose to click the Generate New PIN button or Reset PIN to Default button.

If you are using third party software to set up Wi-Fi Protection, carefully follow the directions. When you are finished, proceed to the next section to set up the newly-configured router.
Section 5 - Connecting to a Wireless Network

Windows® XP

Windows® XP users may use the built-in wireless utility (Zero Configuration Utility). The following instructions are for Service Pack 2 users. If you are using another company’s utility, please refer to the user manual of your wireless adapter for help with connecting to a wireless network. Most utilities will have a “site survey” option similar to the Windows® XP utility as seen below.

If you receive the Wireless Networks Detected bubble, click on the center of the bubble to access the utility.

or

Right-click on the wireless computer icon in your system tray (lower-right corner next to the time). Select View Available Wireless Networks.

The utility will display any available wireless networks in your area. Click on a Wi-Fi network (displayed using the SSID) and click the Connect button.

If you get a good signal but cannot access the Internet, check you TCP/IP settings for your wireless adapter. Refer to the Networking Basics section in this manual for more information.
WPA/WPA2

It is recommended to enable WPA on your wireless router or access point before configuring your wireless adapter. If you are joining an existing network, you will need to know the WPA key being used.

1. Open the Windows® XP Wireless Utility by right-clicking on the wireless computer icon in your system tray (lower-right corner of screen). Select **View Available Wireless Networks**.

2. Highlight the Wi-Fi network (SSID) you would like to connect to and click **Connect**.
3. The **Wireless Network Connection** box will appear. Enter the WPA-PSK Wi-Fi password and click **Connect**.

It may take 20-30 seconds to connect to the wireless network. If the connection fails, please verify that the WPA-PSK settings are correct. The Wi-Fi password must be exactly the same as on the wireless router.
Troubleshooting

This chapter provides solutions to problems that can occur during the installation and operation of the DSL-2770L. Read the following descriptions if you are having problems. The examples below are illustrated in Windows® XP. If you have a different operating system, the screenshots on your computer will look similar to the following examples.

1. Why can’t I access the web-based configuration utility?

When entering the IP address of the D-Link router (192.168.1.1 for example), you are not connecting to a website nor do you have to be connected to the Internet. The device has the utility built-in to a ROM chip in the device itself. Your computer must be on the same IP subnet to connect to the web-based utility.

- Make sure you have an updated Java-enabled web browser. We recommend the following:
  - Microsoft Internet Explorer® 7 and higher
  - Mozilla Firefox 3.5 and higher
  - Google™ Chrome 8 and higher
  - Apple Safari 4 and higher

- Verify physical connectivity by checking for solid link lights on the device. If you do not get a solid link light, try using a different cable or connect to a different port on the device if possible. If the computer is turned off, the link light may not be on.

- Disable any Internet security software running on the computer. Software firewalls such as Zone Alarm, Black Ice, Sygate, Norton Personal Firewall, and Windows® XP firewall may block access to the configuration pages. Check the help files included with your firewall software for more information on disabling or configuring it.
Section 6 - Troubleshooting

- Configure your Internet settings:
  - Go to **Start > Settings > Control Panel**. Double-click the **Internet Options** Icon. From the **Security** tab, click the button to restore the settings to their defaults.
  - Click the **Connection** tab and set the dial-up option to Never Dial a Connection. Click the LAN Settings button. Make sure nothing is checked. Click **OK**.
  - Go to the **Advanced** tab and click the button to restore these settings to their defaults. Click **OK** three times.
  - Close your web browser (if open) and open it.

- Access the web management. Open your web browser and enter the IP address of your D-Link router in the address bar. This should open the login page for your web management.

- If you still cannot access the configuration, unplug the power to the router for 10 seconds and plug back in. Wait about 30 seconds and try accessing the configuration. If you have multiple computers, try connecting using a different computer.

2. What can I do if I forgot my password?

If you forgot your password, you must reset your router. Unfortunately this process will change all your settings back to the factory defaults.

To reset the router, locate the reset button (hole) on the rear panel of the unit. With the router powered on, use a paperclip to hold the button down for 10 seconds. Release the button and the router will go through its reboot process. Wait about 30 seconds to access the router. The default IP address is 192.168.1.1. When logging in, the username is **admin** and leave the password box empty.
3. Why can’t I connect to certain sites or send and receive emails when connecting through my router?

If you are having a problem sending or receiving email, or connecting to secure sites such as eBay, banking sites, and Hotmail, we suggest lowering the MTU in increments of ten (Ex. 1492, 1482, 1472, etc).

To find the proper MTU Size, you’ll have to do a special ping of the destination you’re trying to go to. A destination could be another computer, or a URL.

- Click on **Start** and then click **Run**.

- Windows® 95, 98, and Me users type in **command** (Windows® NT, 2000, XP, Vista®, and 7 users type in **cmd**) and press **Enter** (or click **OK**).

- Once the window opens, you’ll need to do a special ping. Use the following syntax:

  \[ \text{ping [url] [-f] [-l] [MTU value]} \]

  **Example:** `ping yahoo.com -f -l 1472`
You should start at 1472 and work your way down by 10 each time. Once you get a reply, go up by 2 until you get a fragmented packet. Take that value and add 28 to the value to account for the various TCP/IP headers. For example, lets say that 1452 was the proper value, the actual MTU size would be 1480, which is the optimum for the network we’re working with (1452+28=1480).

Once you find your MTU, you can now configure your router with the proper MTU size.

To change the MTU rate on your router follow the steps below:

• Open your browser, enter the IP address of your router (192.168.1.1) and click OK.

• Enter your username (admin) and password (blank by default). Click OK to enter the web configuration page for the device.

• Click on Setup and then click Manual Configure.

• To change the MTU enter the number in the MTU field and click Save Settings to save your settings.

• Test your email. If changing the MTU does not resolve the problem, continue changing the MTU in increments of ten.
Appendix A - Wireless Basics

Wireless Basics

D-Link wireless products are based on industry standards to provide easy-to-use and compatible high-speed wireless connectivity within your home, business or public access wireless networks. Strictly adhering to the IEEE standard, the D-Link wireless family of products will allow you to securely access the data you want, when and where you want it. You will be able to enjoy the freedom that wireless networking delivers.

A wireless local area network (WLAN) is a cellular computer network that transmits and receives data with radio signals instead of wires. Wireless LANs are used increasingly in both home and office environments, and public areas such as airports, coffee shops and universities. Innovative ways to utilize WLAN technology are helping people to work and communicate more efficiently. Increased mobility and the absence of cabling and other fixed infrastructure have proven to be beneficial for many users.

Wireless users can use the same applications they use on a wired network. Wireless adapter cards used on laptop and desktop systems support the same protocols as Ethernet adapter cards.

Under many circumstances, it may be desirable for mobile network devices to link to a conventional Ethernet LAN in order to use servers, printers or an Internet connection supplied through the wired LAN. A Wireless Router is a device used to provide this link.
What is Wireless?

Wireless or Wi-Fi technology is another way of connecting your computer to the network without using wires. Wi-Fi uses radio frequency to connect wirelessly, so you have the freedom to connect computers anywhere in your home or office network.

Why D-Link Wireless?

D-Link is the worldwide leader and award winning designer, developer, and manufacturer of networking products. D-Link delivers the performance you need at a price you can afford. D-Link has all the products you need to build your network.

How does wireless work?

Wireless works similar to how cordless phone work, through radio signals to transmit data from one point A to point B. But wireless technology has restrictions as to how you can access the network. You must be within the wireless network range area to be able to connect your computer. There are two different types of wireless networks Wireless Local Area Network (WLAN), and Wireless Personal Area Network (WPAN).

Wireless Local Area Network (WLAN)

In a wireless local area network, a device called an Access Point (AP) connects computers to the network. The access point has a small antenna attached to it, which allows it to transmit data back and forth over radio signals. With an indoor access point as seen in the picture, the signal can travel up to 300 feet. With an outdoor access point the signal can reach out up to 30 miles to serve places like manufacturing plants, industrial locations, college and high school campuses, airports, golf courses, and many other outdoor venues.
Wireless Personal Area Network (WPAN)

Bluetooth is the industry standard wireless technology used for WPAN. Bluetooth devices in WPAN operate in a range up to 30 feet away.

Compared to WLAN the speed and wireless operation range are both less than WLAN, but in return it doesn’t use nearly as much power which makes it ideal for personal devices, such as mobile phones, PDAs, headphones, laptops, speakers, and other devices that operate on batteries.

Who uses wireless?

Wireless technology as become so popular in recent years that almost everyone is using it, whether it’s for home, office, business, D-Link has a wireless solution for it.

Home
• Gives everyone at home broadband access
• Surf the web, check email, instant message, etc.
• Gets rid of the cables around the house
• Simple and easy to use

Small Office and Home Office
• Stay on top of everything at home as you would at office
• Remotely access your office network from home
• Share Internet connection and printer with multiple computers
• No need to dedicate office space
Where is wireless used?

Wireless technology is expanding everywhere not just at home or office. People like the freedom of mobility and it’s becoming so popular that more and more public facilities now provide wireless access to attract people. The wireless connection in public places is usually called “hotspots”.

Using a D-Link Cardbus Adapter with your laptop, you can access the hotspot to connect to Internet from remote locations like: Airports, Hotels, Coffee Shops, Libraries, Restaurants, and Convention Centers.

Wireless network is easy to setup, but if you’re installing it for the first time it could be quite a task not knowing where to start. That’s why we’ve put together a few setup steps and tips to help you through the process of setting up a wireless network.

Tips

Here are a few things to keep in mind, when you install a wireless network.

Centralize your router or Access Point

Make sure you place the router/access point in a centralized location within your network for the best performance. Try to place the router/access point as high as possible in the room, so the signal gets dispersed throughout your home. If you have a two-story home, you may need a repeater to boost the signal to extend the range.

Eliminate Interference

Place home appliances such as cordless telephones, microwaves, and televisions as far away as possible from the router/access point. This would significantly reduce any interference that the appliances might cause since they operate on same frequency.

Security
Don’t let your next-door neighbors or intruders connect to your wireless network. Secure your wireless network by turning on the WPA or WEP security feature on the router. Refer to product manual for detail information on how to set it up.

## Wireless Modes

There are basically two modes of networking:

- **Infrastructure** – All wireless clients will connect to an access point or wireless router.

- **Ad-Hoc** – Directly connecting to another computer, for peer-to-peer communication, using wireless network adapters on each computer, such as two or more DSL-2770L wireless network Cardbus adapters.

An Infrastructure network contains an Access Point or wireless router. All the wireless devices, or clients, will connect to the wireless router or access point.

An Ad-Hoc network contains only clients, such as laptops with wireless cardbus adapters. All the adapters must be in Ad-Hoc mode to communicate.
Networking Basics

Check your IP address

After you install your new D-Link adapter, by default, the TCP/IP settings should be set to obtain an IP address from a DHCP server (i.e. wireless router) automatically. To verify your IP address, please follow the steps below.

Click on Start > Run. In the run box type cmd and click OK. (Windows® 7/Vista® users type cmd in the Start Search box.)

At the prompt, type ipconfig and press Enter.

This will display the IP address, subnet mask, and the default gateway of your adapter.

If the address is 0.0.0.0, check your adapter installation, security settings, and the settings on your router. Some firewall software programs may block a DHCP request on newly installed adapters.
Statically Assign an IP address

If you are not using a DHCP capable gateway/router, or you need to assign a static IP address, please follow the steps below:

**Step 1**
Windows® 7 - Click on Start > Control Panel > Network and Internet > Network and Sharing Center.
Windows Vista® - Click on Start > Control Panel > Network and Internet > Network and Sharing Center > Manage Network Connections.
Windows® XP - Click on Start > Control Panel > Network Connections.
Windows® 2000 - From the desktop, right-click My Network Places > Properties.

**Step 2**
Right-click on the Local Area Connection which represents your network adapter and select Properties.

**Step 3**
Highlight Internet Protocol (TCP/IP) and click Properties.

**Step 4**
Click Use the following IP address and enter an IP address that is on the same subnet as your network or the LAN IP address on your router.

Example: If the router’s LAN IP address is 192.168.1.1, make your IP address 192.168.1.X where X is a number between 2 and 254. Make sure that the number you choose is not in use on the network. Set the Default Gateway the same as the LAN IP address of your router (I.E. 192.168.1.1).

Set Primary DNS the same as the LAN IP address of your router (192.168.1.1). The Secondary DNS is not needed or you may enter a DNS server from your ISP.

**Step 5**
Click OK twice to save your settings.
# Technical Specifications

## Standards
- IEEE 802.11n
- IEEE 802.11g
- IEEE 802.11b
- IEEE 802.3
- IEEE 802.3u
- IEEE 802.3ab

## Wireless Signal Rates

### IEEE 802.11n 2.4GHz(HT20/40):
- 144.4 Mbps (300) · 130 Mbps (270)
- 115.6 Mbps (240) · 86.7 Mbps (180)
- 72.2 Mbps (150) · 65 Mbps (135)
- 57.8 Mbps (120) · 43.3 Mbps (90)
- 28.9 Mbps (60) · 21.7 Mbps (45)
- 14.4 Mbps (30) · 7.2 Mbps (15)

### IEEE 802.11g:
- 54 Mbps · 48 Mbps · 36 Mbps
- 24 Mbps · 18 Mbps · 12 Mbps
- 11 Mbps · 9 Mbps · 6 Mbps
- 5.5 Mbps · 2 Mbps · 1 Mbps

## Security
- WPA™ - Personal/Enterprise
- WPA2™ - Personal/Enterprise

## Frequency Range
- 2.412 GHz to 2.462 GHz (802.11g/n)
- 2.4 GHz to 2.483 GHz

## Power Consumption
- 12 V/1.5 A

## Operating Temperature
- 32 °F to 104 °F (0 °C to 40 °C)

## Humidity
- 95% maximum (non-condensing)

## Safety & Emissions
- CE
- C-Tick
- UL

## Dimensions
- L: 11.1 cm (4.37 inches)
- W: 9.3 cm (3.66 inches)
- H: 14.5 cm (5.71 inches)

---

1 Maximum wireless signal rate derived from IEEE Standard 802.11a, 802.11g, and 802.11n specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental factors will adversely affect wireless signal range.

2 Frequency Range varies depending on each country’s regulations.
