# Package Contents

- DIR-100 Ethernet Broadband Router
- Power Adapter
- Ethernet Cable
- Quick Installation Guide
- Manual on CD

**Note:** Using a power supply with a different voltage rating than the one included with the DIR-600 will cause damage and void the warranty for this product.

The product must be used with the power adapter included with the device.

**Note:** Always attach the power cord plug to the power supply, before inserting the power cord and connected power supply to the wall outlet.

# System Requirements

- Ethernet-based Cable or DSL Modem
- Computers with Windows®, Macintosh®, or Linux-based operating systems with an installed Ethernet adapter
- Internet Explorer 6 or Firefox 2.0 or above (for configuration)

# Features

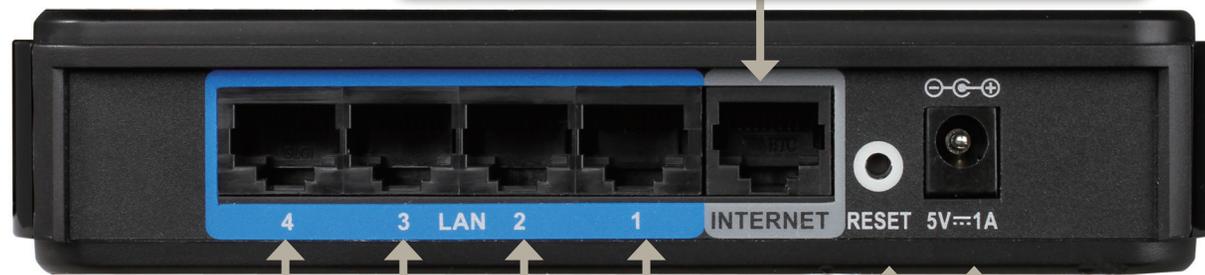

- **Broadband Modem and IP Sharing** - Connects multiple computers to a Broadband (Cable or DSL) modem to share the Internet connection.
- **Ethernet Switch** - Allows you to quickly and easily share an Internet connection with multiple computers and devices.
- **VPN supported** - Supports multiple and concurrent IPsec and PPTP pass-through sessions, so multiple users behind the DIR-100 can access corporate networks through various VPN clients more securely.
- **Advanced Firewall, Access Control, and WebSite Filtering Features** - The Web-based user interface displays a number of advanced network management features including:
- **Web-Based Management** - DIR-100 is configurable through any network computer's web browser using Netscape or Internet Explorer.
- **Port Forwarding Supported** - Enables you to expose WWW, FTP and other services on your LAN to be accessible to Internet users.
- **Special Application Supported** - Special applications requiring multiple connections, like Internet gaming, video conferencing, Internet telephony and so on. The DIR-100 can sense the application type and open a multi-port tunnel for it.
- **DMZ Host Supported** - Allows a networked computer to be fully exposed to the Internet. This function is used when the Special Application feature is insufficient to allow an application to function correctly.

# Hardware Overview

## Connections

### INTERNET

This port is where the user is to connect the Ethernet cable from an outside source that is taking the connection from your local ISP.

### LAN PORTS\* 1-4

LAN ports which may be uplinked using a CAT5 Ethernet RJ-45 cable. The corresponding LEDs on the front panel will light green when one of these ports are connected to an end node such as a hub, switch or computer equipped with a network adapter card (NIC).

### Reset

Used to restore the DIR-100 back to factory default settings.

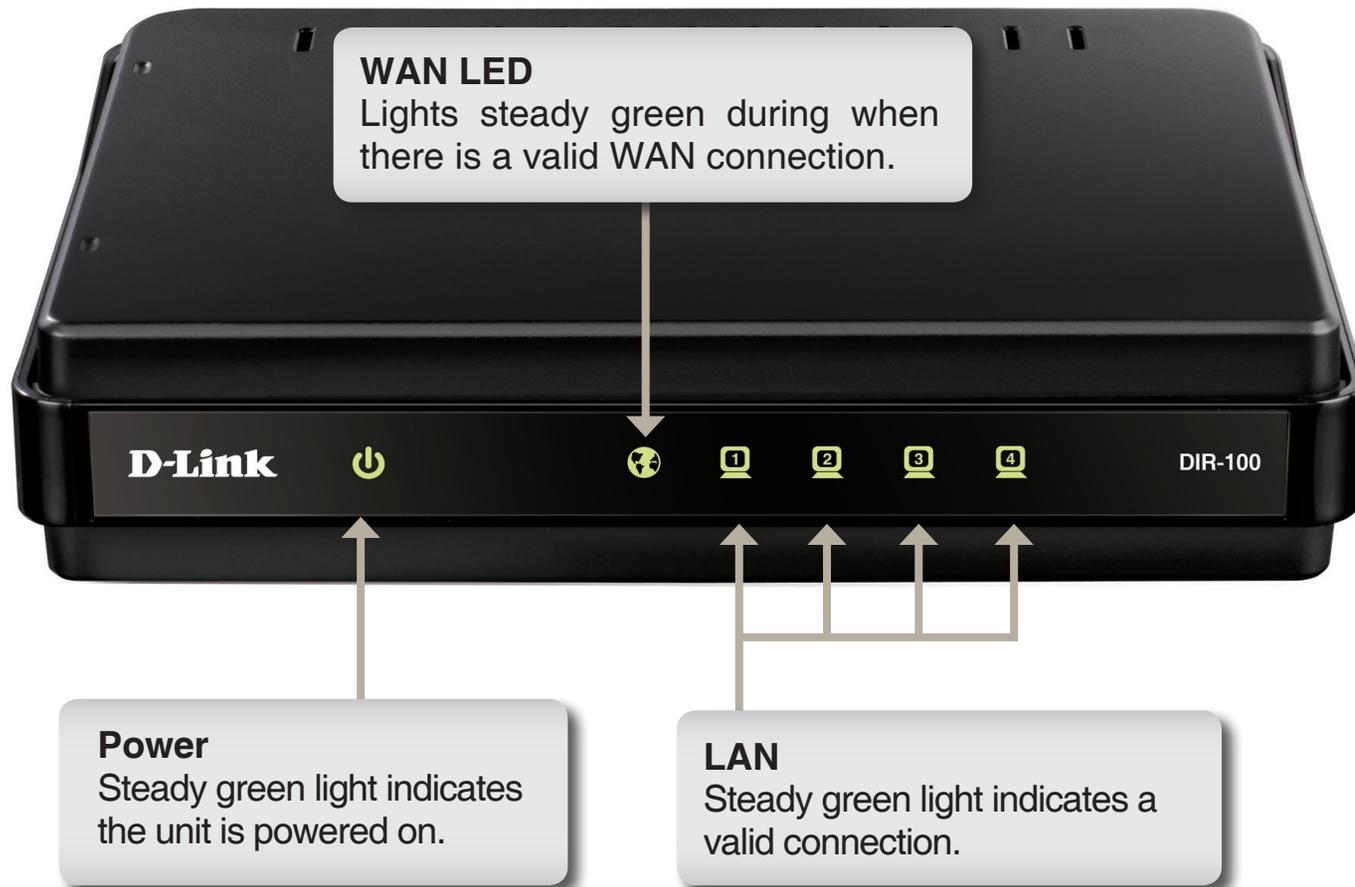

### Power

Connect one end of your included power adapter to the power port and the other end into your power outlet.

**\*All ports (both LAN & WAN) are Auto-MDIX. All ports auto-sense cable types to accommodate Straight-through or Cross-over cable.**

# Hardware Overview

## LEDs

# Installation

## Getting Started

### Installation

This section will walk you through the installation process. Placement of the router is very important. Do not place the router in an enclosed area such as a closet, cabinet, or in the attic or garage.

### Before you Begin

Please configure the router with the computer that was last connected directly to your modem. Also, you can only use the Ethernet port on your modem. If you were using the USB connection before using the router, then you must turn off your modem, disconnect the USB cable and connect an Ethernet cable to the WAN port on the router, and then turn the modem back on. In some cases, you may need to call your ISP to change connection types (USB to Ethernet). If you have DSL and are connecting via PPPoE, make sure you disable or uninstall any PPPoE software such as WinPoet, Broadjump, or Ethernet 300 from your computer or you will not be able to connect to the Internet.

# Wall Mounting Your Device

You can mount the DIR-100 to a wall or a partition for easy and convenient placement of your device.

To wall mount your device,

- A. Screw the provided screws with the equipment to the wall or partition where the device to be placed.
- B. Place the mounting holes on the bottom of the device over the screws to mount it to the wall or partition.
- C. Connect your cables to the device.

Step A

Step B

Step C

# Connect to Cable/DSL/Satellite Modem

If you are connecting the router to a cable/DSL/satellite modem, please follow the steps below:

1. Place the router in an open and central location. Do not plug the power adapter into the router.
2. Turn the power off on your modem. If there is no on/off switch, then unplug the modem's power adapter. Shut down your computer.
3. Unplug the Ethernet cable (that connects your computer to your modem) from your computer and place it into the WAN port on the router.
4. Plug an Ethernet cable into one of the four LAN ports on the router. Plug the other end into the Ethernet port on your computer.
5. Turn on or plug in your modem. Wait for the modem to boot (about 30 seconds).
6. Plug the power adapter to the router and connect to an outlet or power strip. Wait about 30 seconds for the router to boot.
7. Turn on your computer.
8. Verify the link lights on the router. The power light, WAN light, and the LAN light (the port that your computer is plugged into) should be lit. If not, make sure your computer, modem, and router are powered on and verify the cable connections are correct.
9. Skip to page 16 to configure your router.

# Configuration

The DIR-100 provides an embedded Web-based management utility making it operating system independent. You can configure your DIR-100 through the Netscape Communicator or Internet Explorer browser in MS Windows®, Macintosh, Linux or UNIX based platforms. All that is needed is a web browser such as Internet Explorer or Netscape Navigator with Java Script enabled.

## Web-based Configuration Utility

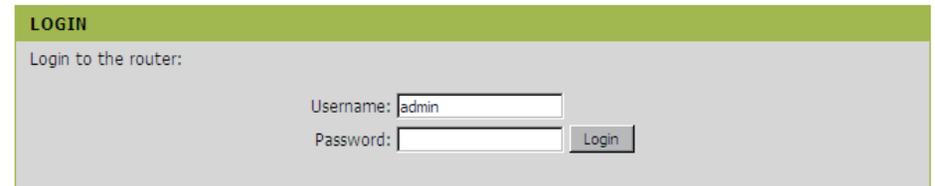

Open your web browser and type in the IP address of the DIR-100 into the Location (for Netscape) or Address (for IE) field and press “Enter.” The default IP address of the DIR-100 is 192.168.0.1

For example: `http://192.168.0.1`

After the connection is established, the logon screen will pop up.

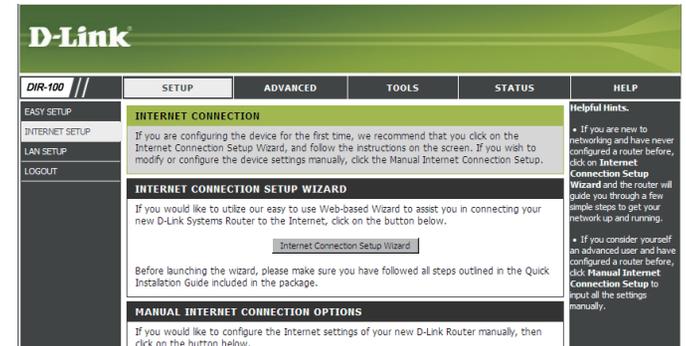

To log in as an administrator, enter the username of “admin” and the password (there isn’t a default password, leave it blank). Click the OK button. If the password is correct, the web-management interface will appear.

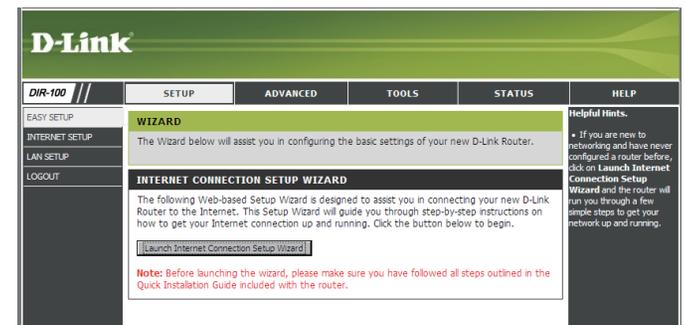

# Setup Wizard

You may run the setup wizard to quickly setup your router.

Click **Internet Connection Setup Wizard** to launch the wizard.

Click **Launch Internet Connection Setup Wizard** to begin.

Click **Next** to continue.

Create a new password and then click **Next** to continue.

**STEP 1: SET YOUR PASSWORD**

By default, your new D-Link Router does not have a password configured for administrator access to the Web-based configuration pages. To secure your new networking device, please set and verify a password below:

Password: [.....]  
Verify Password: [.....]

Prev Next Cancel

Select your time zone from the drop-down menu and then click **Next** to continue.

**STEP 2: SELECT YOUR TIME ZONE**

Select the appropriate time zone for your location. This information is required to configure the time-based options for the router.

Time Zone: (GMT+08:00) Hong Kong, Perth, Singapore, Taipei  
NTP Server Used: ntp1.dlink.com

Prev Next Cancel

Select the type of Internet connection you use and then click **Next** to continue.

**STEP 3: CONFIGURE YOUR INTERNET CONNECTION**

Please select the internet connection type below:

- DHCP Connection (Dynamic IP Address)**  
Choose this if your Internet connection automatically provides you with an IP Address. Most Cable Modems use this type of connection.
- Username / Password Connection (PPPoE)**  
Choose this option if your Internet connection requires a username and password to get online. Most DSL modems use this connection type of connection.
- Username / Password Connection (PPTP)**  
Choose this option if you use Dial-Up Networking connection type of connection.
- Username / Password Connection (L2TP)**  
Choose this option if you use Dial-Up Networking connection type of connection.
- Static IP Address Connection**  
Choose this option if your Internet Setup Provider provided you with IP Address information that has to be manually configured.
- Russia PPPoE (Dual Access)**  
Choose this option if your Internet connection requires a username and password to get online as well as static route to access Internet service provider's internal network. Certain ISPs in Russia use this type of connection.
- Russia PPTP (Dual Access)**  
Choose this option if your Internet connection requires a username and password to get online as well as static route to access Internet service provider's internal network. Certain ISPs in Russia use this type of connection.

Prev Next Cancel

If you selected Dynamic, you may need to enter the MAC address of the computer that was last connected directly to your modem. If you are currently using that computer, click **Clone MAC Address** and then click **Next** to continue.

The Host Name is optional but may be required by some ISPs. The default host name is the device name of the Router and may be changed.

If you selected PPPoE, enter your PPPoE username and password. Click **Next** to continue.

Select **Static** if your ISP assigned you the IP address, subnet mask, gateway, and DNS server addresses.

**Note:** Make sure to remove your PPPoE software from your computer. The software is no longer needed and will not work through a router.

If you selected PPTP, enter your PPTP username and password. Click **Next** to continue.

**DHCP CONNECTION (DYNAMIC IP ADDRESS)**

To set up this connection, please make sure that you are connected to the D-Link Router with the PC that was originally connected to your broadband connection. If you are, then click the Clone MAC button to copy your computer's MAC Address to the D-Link Router.

Host Name: DIR-100 (Optional)

MAC Address: 00 - 12 - 10 - 00 - AD - 02 (Optional)

Clone MAC Address

Note: You may also need to provide a Host Name. If you do not have or know this information, please contact your ISP.

Prev Next Cancel

**SET USERNAME AND PASSWORD CONNECTION (PPPOE)**

To set up this connection you will need to have a Username and Password from your Internet Service Provider. If you do not have this information, please contact your ISP.

Address Mode:  Dynamic PPPoE  Static PPPoE

IP Address: 0.0.0.0

Username: \_\_\_\_\_

Password: \_\_\_\_\_

Verify Password: \_\_\_\_\_

Service Name: \_\_\_\_\_ (Optional)

Note: You may also need to provide a Service Name. If you do not have or know this information, please contact your ISP.

Prev Next Cancel

**SET USERNAME AND PASSWORD CONNECTION (PPTP)**

To set up this connection you will need to have a Username and Password from your Internet Service Provider. You also need PPTP IP address. If you do not have this information, please contact your ISP.

Address Mode:  Dynamic IP  Static IP

PPTP IP Address: 0.0.0.0

PPTP Subnet Mask: 255.255.255.0

PPTP Gateway IP Address: 0.0.0.0

PPTP Server IP Address(may be same as gateway): 0.0.0.0

PPTP Account: \_\_\_\_\_

PPTP Password: \_\_\_\_\_

Verify Password: \_\_\_\_\_

Prev Next Cancel

If you selected L2TP, enter your L2TP username and password. Click **Next** to continue.

**SET USERNAME AND PASSWORD CONNECTION (L2TP)**

To set up this connection you will need to have a Username and Password from your Internet Service Provider. You also need L2TP IP address. If you do not have this information, please contact your ISP.

Address Mode:  Dynamic IP  Static IP

IP Address:

Subnet Mask:

L2TP Gateway IP Address:

Server IP/Name:

L2TP Account:

L2TP Password:

Verify Password:

If you selected Static, enter your network settings supplied by your Internet provider. Click **Next** to continue.

**SET STATIC IP ADDRESS CONNECTION**

To set up this connection you will need to have a complete list of IP information provided by Internet Service Provider. If you have a Static IP connection and do not have this information, please contact your ISP.

WAN IP Address:

WAN Subnet Mask:

WAN Gateway Address:

Primary DNS Address:

Secondary DNS Address:  (Optional)

If you selected Russia PPPoE(Dual Access), enter the information provided by your ISP. Upon your ISP requirement, you may need to set up “routing” function after completed Wizard.

**SET USERNAME AND PASSWORD CONNECTION (RUSSIA PPPoE DUAL ACCESS)**

To set up this connection you will need to have a Username and Password from your Internet Service Provider. If you do not have this information, please contact your ISP.

Address Mode:  Dynamic IP  Static IP

IP Address:

Username:

Password:

Verify Password:

Service Name:  (Optional)

Note: You may also need to provide a Service Name. If you do not have or know this information, please contact your ISP.

---

**WAN Physical Setting**

Address Mode:  DHCP Mode  Static IP

IP Address:

Subnet Mask:

Gateway:

Primary DNS Address:

Secondary DNS Address:  (Optional)

If you selected Russia PPTP(Dual Access), enter the information provided by your ISP. Upon your ISP requirement, you may need to set up “routing” function after completed Wizard.

**SET USERNAME AND PASSWORD CONNECTION (RUSSIA PPTP DUAL ACCESS)**

To set up this connection you will need to have a Username and Password from your Internet Service Provider. You also need PPTP IP address. If you do not have this information, please contact your ISP.

Address Mode:  Dynamic IP  Static IP

PPTP IP Address:

PPTP Subnet Mask:

PPTP Gateway IP Address:

PPTP Server IP Address(may be same as gateway):

PPTP Account:

PPTP Password:

Verify Password:

Click Connect to save your settings. Once the router is finished rebooting, click Continue. Please allow 1-2 minutes to connect.

Close your browser window and reopen it to test your Internet connection. It may take a few tries to initially connect to the Internet.

**SETUP COMPLETE!**

The Setup Wizard has completed. Click the Reboot button to save your settings and reboot the router.

# Internet Setup

## Static (assigned by ISP)

Select Static IP Address if all WAN IP information is provided to you by your ISP. You will need to enter in the IP address, subnet mask, gateway address, and DNS address(es) provided to you by your ISP. Each IP address entered in the fields must be in the appropriate IP form, which are four octets separated by a dot (x.x.x.x). The Router will not accept the IP address if it is not in this format.

**IP Address:** Enter the IP address assigned by your ISP.

**Subnet Mask:** Enter the Subnet Mask assigned by your ISP.

**ISP Gateway Address:** Enter the Gateway assigned by your ISP.

**MAC Address:** The default MAC Address is set to the WAN's physical interface MAC address on the Broadband Router. It is not recommended that you change the default MAC address unless required by your ISP.

**Clone MAC Address:** The default MAC address is set to the WAN's physical interface MAC address on the Broadband Router. You can use the **Clone MAC Address** button to copy the MAC address of the Ethernet Card installed by your ISP and replace the WAN MAC address with the MAC address of the router. It is not recommended that you change the default MAC address unless required by your ISP.

**Primary DNS Address:** Enter the Primary DNS server IP address assigned by your ISP.

**Secondary DNS Address:** This is optional.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1492 is the default MTU.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The 'INTERNET CONNECTION' section is active, displaying instructions and a 'Note' about PPPoE. Below this, the 'INTERNET CONNECTION TYPE' is set to 'Static IP'. The 'STATIC IP ADDRESS INTERNET CONNECTION TYPE' section contains input fields for IP Address (0.0.0.0), Subnet Mask (255.255.255.0), ISP Gateway Address (0.0.0.0), Primary DNS Address, Secondary DNS Address (Optional), MTU (1500), and MAC Address (00-00-00-00-00-00, Optional). A 'Duplicate MAC address from your current PC' button is present. 'Save Settings' and 'Don't Save Settings' buttons are at the bottom.

# Internet Setup

## Dynamic (Cable)

**Dynamic IP Address:** Choose Dynamic IP Address to obtain IP Address information automatically from your ISP. Select this option if your ISP does not give you any IP numbers to use. This option is commonly used for Cable modem services.

**Host Name:** The Host Name is optional but may be required by some ISPs. The default host name is the device name of the Router and may be changed.

**MAC Address:** The default MAC Address is set to the WAN's physical interface MAC address on the Broadband Router. It is not recommended that you change the default MAC address unless required by your ISP.

**Clone MAC Address:** The default MAC address is set to the WAN's physical interface MAC address on the Broadband Router. You can use the "Clone MAC Address" button to copy the MAC address of the Ethernet Card installed by your ISP and replace the WAN MAC address with the MAC address of the router. It is not recommended that you change the default MAC address unless required by your ISP.

**Primary DNS Addresses:** Enter the Primary DNS (Domain Name Server) server IP address assigned by your ISP.

**Secondary DNS Address:** This is optional.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1500 is the default MTU.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The left sidebar has 'EASY SETUP', 'INTERNET SETUP', 'LAN SETUP', and 'LOGOUT'. The main content area is titled 'INTERNET CONNECTION' and contains the following sections:

- INTERNET CONNECTION:** A text block explaining connection types (Static IP, DHCP, PPPoE, PPTP, L2TP, Russia PPPoE, Russia PPTP) and a note about PPPoE. Below are 'Save Settings' and 'Don't Save Settings' buttons.
- INTERNET CONNECTION TYPE:** A section with the instruction 'Choose the mode to be used by the router to connect to the Internet.' and a dropdown menu showing 'Dynamic IP (DHCP)'.
- DYNAMIC IP (DHCP) INTERNET CONNECTION TYPE:** A section with the instruction 'Use this Internet connection type if your Internet Service Provider (ISP) didn't provide you with IP Address information and/or a username and password.' It includes input fields for:
  - Host Name: DIR-100
  - Primary DNS Address: (Optional)
  - Secondary DNS Address: (Optional)
  - MTU: 1500
  - MAC Address: 00 - 32 - 10 - 00 - AD - 02 (Optional), with a 'Duplicate MAC address from your current PC' button.

At the bottom of the main content area are 'Save Settings' and 'Don't Save Settings' buttons. The footer of the page says 'WIRED'. On the right side, there is a 'Helpful Hints' section with two bullet points: 'Internet Connection' and 'Support'.

# Internet Setup

## PPPoE (DSL)

Choose PPPoE (Point to Point Protocol over Ethernet) if your ISP uses a PPPoE connection. Your ISP will provide you with a username and password. This option is typically used for DSL services. Make sure to remove your PPPoE software from your computer. The software is no longer needed and will not work through a router.

**PPPoE:** Select **Dynamic** (most common) or **Static**. Select **Static** if your ISP assigned you the IP address, subnet mask, gateway, and DNS server addresses.

**User Name:** Enter your PPPoE user name.

**Password:** Enter your PPPoE password and then retype the password in the next box.

**Service Name:** Enter the ISP Service Name (optional).

**IP Address:** Enter the IP address (Static PPPoE only).

**Primary DNS Addresses:** Enter the Primary and Secondary DNS Server Addresses (Static PPPoE only).

**Maximum Idle Time:** Enter a maximum idle time during which the Internet connection is maintained during inactivity. To disable this feature, enable Auto-reconnect.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1492 is the default MTU.

**Connection Mode Select:** Select either Always-on, Manual, or Connect-on demand.

The screenshot shows the D-Link DIR-100 web interface for Internet Setup. The page is titled "INTERNET CONNECTION" and includes a "Helpful Hints" sidebar on the right. The main content area is divided into sections: "INTERNET CONNECTION TYPE" and "PPPOE".

**INTERNET CONNECTION TYPE**  
 Choose the mode to be used by the router to connect to the Internet.  
 My Internet Connection is:

**PPPOE**  
 Enter the information provided by your Internet Service Provider (ISP).

Address Mode :  Dynamic PPPoE  Static PPPoE  
 IP Address:   
 Username:   
 Password:   
 Verify Password:   
 Service Name:  (Optional)  
 Connect mode select:  Always  Manual  Connect-on demand  
 Maximum Idle Time:  (minutes)  
 Primary DNS Address:   
 Secondary DNS Address:  (Optional)  
 MTU:   
 MAC Address:  (Optional)

Buttons:

**Helpful Hints:**

- Internet Connection:** When configuring the router to access the Internet, be sure to choose the correct Internet Connection Type from the drop-down menu. If you are still unsure of which option to choose, please contact your Internet Service Provider (ISP).
- Support:** If you are having trouble accessing the Internet through the router, double check any settings you have entered on this page and verify them with your ISP if needed.

# Internet Setup

## PPTP

Choose PPTP (Point-to-Point-Tunneling Protocol ) if your ISP uses a PPTP connection. Your ISP will provide you with a username and password. This option is typically used for DSL services.

**PPTP:** Select **Dynamic** (most common) or **Static**. Select **Static** if your ISP assigned you the IP address, subnet mask, gateway, and DNS server addresses.

**IP Address:** Enter the IP address (Static PPTP only).

**Subnet Mask:** Enter the Primary and Secondary DNS Server Addresses (Static PPTP only).

**Gateway:** Enter the Gateway IP Address provided by your ISP.

**DNS:** The DNS server information will be supplied by your ISP (Internet Service Provider.)

**Server IP:** Enter the Server IP provided by your ISP (optional).

**PPTP Account:** Enter your PPTP account name.

**PPTP Password:** Enter your PPTP password and then retype the password in the next box.

**Maximum Idle Time:** Enter a maximum idle time during which the Internet connection is maintained during inactivity. To disable this feature, enable Auto-reconnect.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1492 is the default MTU.

**Connect Mode:** Select either Always-on, Manual, or Connect-on demand.

**D-Link**

DNS: \_\_\_\_\_

MTU: 1400

MAC Address: [00] - [00] - [00] - [00] - [00] - [00] (Optional)

**Helpful Hints.**

- Internet Connection:** When configuring the router to access the Internet, be sure to choose the correct Internet Connection Type from the drop-down menu. If you are still unsure of which option to choose, please contact your Internet Service Provider (ISP).
- Support:** If you are having trouble accessing the Internet through the router, double check any settings you have entered on this page and verify them with your ISP if needed.

# Internet Setup

## L2TP

Choose L2TP (Layer 2 Tunneling Protocol) if your ISP uses a L2TP connection. Your ISP will provide you with a username and password. This option is typically used for DSL services.

**L2TP:** Select **Dynamic** (most common) or **Static**. Select **Static** if your ISP assigned you the IP address, subnet mask, gateway, and DNS server addresses.

**IP Address:** Enter the IP address (Static L2TP only).

**Subnet Mask:** Enter the Primary and Secondary DNS Server Addresses (Static L2TP only).

**Gateway:** Enter the Gateway IP Address provided by your ISP.

**DNS:** The DNS server information will be supplied by your ISP (Internet Service Provider.)

**Server IP:** Enter the Server IP provided by your ISP (optional).

**L2TP Account:** Enter your L2TP account name.

**L2TP Password:** Enter your L2TP password and then retype the password in the next box.

**Maximum Idle Time:** Enter a maximum idle time during which the Internet connection is maintained during inactivity. To disable this feature, enable Auto-reconnect.

**MTU:** Maximum Transmission Unit - you may need to change the MTU for optimal performance with your specific ISP. 1492 is the default MTU.

**Connect Mode:** Select either Always-on, Manual, or Connect-on demand.

The screenshot displays the D-Link DIR-100 web interface for Internet Setup. The 'INTERNET CONNECTION' section is selected, and the 'L2TP' configuration is active. The 'My Internet Connection is' dropdown is set to 'L2TP (Username / Password)'. The 'L2TP' section contains the following fields and options:

- Address Mode:** Radio buttons for Dynamic IP and Static IP (selected).
- IP Address:** 0.0.0.0 (assigned by your ISP)
- Subnet Mask:** 255.255.255.0
- Gateway:** 0.0.0.0
- Server IP/Name:** 0.0.0.0
- L2TP Account:** [Empty text box]
- L2TP Password:** [Empty text box]
- Verify Password:** [Empty text box]
- Connect mode select:** Dropdown menu set to 'Always' with an 'Add New Schedule' button.
- Maximum Idle Time:** 0 (minutes)

Helpful Hints on the right side of the page include:

- Internet Connection:** When configuring the router to access the Internet, be sure to choose the correct Internet Connection Type from the drop-down menu. If you are still unsure of which option to choose, please contact your Internet Service Provider (ISP).
- Support:** If you are having trouble accessing the Internet through the router, double check any settings you have entered on this page and verify them with your ISP if needed.

# LAN Setup

## Router Settings

**Router IP Address:** The IP address of your router on the local area network. Your local area network settings are based on the address assigned here. For example, 192.168.0.1.

**Subnet Mask:** The subnet mask of your router on the local area network.

**Local Domain Name:** This entry is optional. Enter a domain name for the local network. The DHCP server will give this domain name to the computers on the LAN. So, for example, if you enter mynetwork.net here, and you have a PC with a name of chris, that PC will be known as chris.mynetwork.net. Note, however, if the router's WAN settings specify Dynamic IP Address, and the ISP's DHCP server assigns a domain name to the router, that domain name will override any name you enter here.

**DNS Relay:** When DNS Relay is enabled, the router plays the role of a DNS server. DNS requests sent to the router are forwarded to the ISP's DNS server. This provides a constant DNS address that LAN computers can use, even when the router obtains a different DNS server address from the ISP upon re-establishing the WAN connection. You should disable DNS relay if you implement a LAN-side DNS server as a virtual server.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The left sidebar lists 'EASY SETUP', 'INTERNET SETUP', 'LAN SETUP', and 'LOGOUT'. The main content area is titled 'NEWORK SETTING' (sic) and contains the following sections:

- NEWORK SETTING:** A green header section with instructions: "Use this section to configure the internal network settings of your router and also to configure the built-in DHCP server to assign IP address to the computers on your network. The IP address that is configured here is the IP address that you use to access the Web-based management interface. If you change the IP address here, you may need to adjust your PC's network settings to access the network again." Below this is a note: "Please Note that this section is optional and you do not need to change any of the settings here to get your network up and running." and two buttons: 'Save Settings' and 'Don't Save Settings'.
- ROUTER SETTINGS:** A section with instructions: "Use this section to configure the internal network settings of your router. The IP address that is configured here is the IP address that you use to access the Web-based management interface. If you change the IP address here, you may need to adjust your PC's network settings to access the network again." It contains four input fields: 'Router IP Address' (192.168.0.1), 'Default Subnet Mask' (255.255.255.0), 'Local Domain Name' (router), and 'Enable DNS Relay' (checked).
- DHCP SERVER SETTINGS:** A section with instructions: "Use this section to configure the built-in DHCP server to assign IP address to the computers on your network." It contains three input fields: 'Enable DHCP Server' (checked), 'DHCP IP Address Range' (100 to 199) with a note "(addresses within the LAN subnet)", and 'DHCP Lease Time' (480) with a note "(minutes)".
- DHCP CLIENT LIST:** A table with columns: Host Name, IP Address, MAC Address, and Expired Time.
- NUMBER OF DYNAMIC DHCP CLIENTS:** A table with columns: Host Name, IP Address, MAC Address, and Expired Time.

On the right side of the interface, there is a 'Helpful Hints.' section with a bullet point: "If you already have a DHCP server on your network or are using static IP addresses on all the devices on your network, uncheck **Enable DHCP Server** to disable this feature."

# LAN Setup

## DHCP Server Settings

**DHCP Server:** Once the router is properly configured and this DHCP Server option is enabled, the DHCP Server will manage the IP addresses and other network configuration information for computers and other devices connected to the Local Area Network. There is no need for you to do this yourself.

The computers (and other devices) connected to your LAN also need to have their TCP/IP configuration set to “DHCP” or “Obtain an IP address automatically”.

**DHCP IP Address Range:** These two IP values (from and to) define a range of IP addresses that the DHCP Server uses when assigning addresses to computers and devices on your Local Area Network. Any addresses that are outside of this range are not managed by the DHCP Server; these could, therefore, be used for manually configured devices or devices that cannot use DHCP to obtain network address details automatically.

**Lease Time:** The amount of time that a computer may have an IP address before it is required to renew the lease. The lease functions just as a lease on an apartment would. The initial lease designates the amount of time before the lease expires. If the tenant wishes to retain the address when the lease is expired then a new lease is established. If the lease expires and the address is no longer needed then another tenant may use the address.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The left sidebar lists 'EASY SETUP', 'INTERNET SETUP', 'LAN SETUP', and 'LOGOUT'. The main content area is titled 'NEWWORK SETTING' and contains instructions for configuring internal network settings. Below this is the 'ROUTER SETTINGS' section, which includes fields for Router IP Address (192.168.0.1), Default Subnet Mask (255.255.255.0), Local Domain Name (router), and an enabled checkbox for 'Enable DNS Relay'. The 'DHCP SERVER SETTINGS' section includes an enabled checkbox for 'Enable DHCP Server', a DHCP IP Address Range of 100 to 199, and a DHCP Lease Time of 480 minutes. At the bottom, there is a 'DHCP CLIENT LIST' table with columns for Host Name, IP Address, MAC Address, and Expired Time.

Host Name	IP Address	MAC Address	Expired Time

# LAN Setup

## DHCP Client list & reservation

**DHCP Reservations List:** This is a list of the computers or other devices for which you have created reserved DHCP entries. You can enable and disable entries with the Enabled checkbox. A DHCP Reservation entry can be changed by clicking the Edit icon, or deleted by clicking the Delete icon. When you click the Edit icon, the item is highlighted, and the “DHCP Reservations” section is activated for editing.

**Dynamic DHCP Client List:** In this section you can see what LAN devices are currently leasing IP addresses.

The screenshot displays the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The 'LAN SETUP' menu item is selected. The main content area is divided into several sections:

- NEWORK SETTING:** Contains instructions for configuring internal network settings and a note that this section is optional. It includes 'Save Settings' and 'Don't Save Settings' buttons.
- ROUTER SETTINGS:** Includes fields for Router IP Address (192.168.0.1), Default Subnet Mask (255.255.255.0), Local Domain Name (router), and an 'Enable DNS Relay' checkbox (checked).
- DHCP SERVER SETTINGS:** Includes an 'Enable DHCP Server' checkbox (checked), a DHCP IP Address Range (100 to 199), and a DHCP Lease Time (480 minutes).
- DHCP CLIENT LIST:** A table with columns for Host Name, IP Address, MAC Address, and Expired Time.
- NUMBER OF DYNAMIC DHCP CLIENTS:** A table with columns for Host Name, IP Address, MAC Address, and Expired Time.
- 24 - DHCP RESERVATIONS:** Shows the remaining number of clients that can be configured (24) and a table with columns for Host Name, IP Address, MAC Address, and Computer Name. Two reservation entries are visible, each with a checkbox and a dropdown menu for the computer name.

**Helpful Hints:** A note on the right side of the interface states: "If you already have a DHCP server on your network or are using static IP addresses on all the devices on your network, uncheck **Enable DHCP Server** to disable this feature."

# Tools

## Time

**Automatic:** NTP is short for Network Time Protocol. NTP synchronizes computer clock times in a network of computers. This field is optional.

**Manual:** To manually input the time, enter the values in these fields for the Year, Month, Day, Hour, Minute, and Second. Click Set Time.

**Time Zone:** Select the Time Zone from the drop-down menu.

**Daylight Saving:** To select Daylight Saving time manually, select enabled or disabled, and enter a start date and an end date for daylight saving time.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The left sidebar lists various configuration options: ADMIN, TIME, LOG SETTINGS, EMAIL SETTINGS, SAVE AND RESTORE, FIRMWARE UPDATE, DDNS SETTING, SYSTEM CHECK, SCHEDULES, and LOGOUT. The main content area is titled 'TIME AND DATE' and contains the following sections:

- TIME AND DATE:** A descriptive paragraph about the configuration options, followed by 'Save Settings' and 'Don't Save Settings' buttons.
- TIME AND DATE CONFIGURATION:** Shows the current time as '2/8/2010 18:22:10'. The Time Zone is set to '(GMT+08:00) Hong Kong, Perth, Singapore, Taipei'. The 'Enable Daylight Saving' checkbox is checked, with a 'Sync. with your computer's time settings' button.
- AUTOMATIC TIME AND DATE CONFIGURATION:** The checkbox 'Automatically synchronize with D-Link's Internet time server' is checked. The NTP Server Used is 'ntp1.dlink.com', with an 'Update Now' button.
- SET THE TIME AND DATE MANUALLY:** Fields for Year (2010), Month (February), Day (8), Hour (18), Minute (23), and Second (54).

On the right side, under 'Helpful Hints.', there is a note: '• Either enter the time manually by clicking the **Sync. from your computer's time settings** button, or use the **Automatic Time Configuration** option to have your router synchronize with a time server on the Internet.'

# Advanced

## Port Forwarding Rules

Port Forwarding can be used to open a port or range of ports to a device on your network . To use them, click the checkbox to Enable the entry, select a pre-defined service from the Application Name drop down menu, select a computer from the Computer Name drop down menu, and click Save Settings. The Application, Computer, and Ports can also be filled in manually if your Application or Computer is not listed in the drop down menus.

**Name:** The name for the service being provided by the device on your LAN that uses the ports being opened.

**IP Address:** The server computer on the LAN network that the specified ports will be opened to.

**Application Name:** This contains a list of pre-defined services.

**Computer Name:** This contains a list of the devices on your network which have obtained an IP Address from the router.

**Port:** The port number that users on the Internet will use to access the defined service.

**Protocol Type:** The protocol used by the service the device on your LAN is providing.

**Schedule:** The schedule may be set to Always, which will allow the particular service to always be enabled. You can create your own times in the Tools > Schedules section.

**D-Link**

DIR-100 // SETUP ADVANCED TOOLS STATUS HELP

**ADVANCE PORT FORWARDING RULES**

This option is used to open multiple ports or a range of ports in your router and redirect data through those ports to a single PC on your network. This feature allows you to enter ports in various formats including, Port Ranges (100-150), Individual Ports (80, 68, 888), or Mixed (1020-5000, 689). This option is only applicable to the INTERNET session.

Save Settings Don't Save Settings

**24 - ADVANCED PORT FORWARDING RULES**

Remaining number of rules that can be created : 24

	Name	IP Address	Application Name	Computer Name	Protocol	Port	Schedule
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	<< Application Name	<< Computer Name	Any	<input type="text"/>	Always on
<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	<< Application Name	<< Computer Name	Any	<input type="text"/>	Always on

**Helpful Hints.**

- Check the **Application Name** drop-down menu for a list of pre-defined applications that you can select from. If you select one of the pre-defined applications, click the arrow button next to the drop-down menu to fill out the appropriate fields.
- You can select your computer from the list of DHCP clients in the **Computer Name** drop-down menu, or enter the IP address manually of the computer you would like to open the specified port to.
- Select a schedule for when the virtual server will be enabled. If you do not see the schedule you need in the list of schedules, go to the Schedules section.

# Application Rules

Some applications require multiple connections, such as Internet gaming, video conferencing, Internet telephony and others. These applications have difficulties working through NAT (Network Address Translation). Special Applications makes some of these applications work with the DIR-100.

**Rule:** Check the box to enabled the rule.

**Name:** Enter a name for the rule.

**Trigger Port:** This is the port used to trigger the application. It can be either a single port or a range of ports.

**Firewall Port:** This is the port number on the WAN side that will be used to access the application. You may define a single port or a range of ports. You can use a comma to add multiple ports or port ranges.

**Traffic Type:** Select **TCP**, **UDP**, or **ANY**.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The left sidebar contains menu items: 'PORT FORWARDING', 'APPLICATION RULES', 'ACCESS CONTROL', 'WEBSITE FILTER', 'FIREWALL SETTINGS', 'ADVANCED NETWORK', 'ROUTING', and 'LOGOUT'. The main content area is titled 'APPLICATION RULES' and contains the following text: 'The Application Rules option is used to open single or multiple ports in your firewall when the router senses data sent to the Internet on an outgoing "Trigger" port or port range. Special Applications rules apply to all computers on your internal network.' Below this text are 'Save Settings' and 'Don't Save Settings' buttons. A section titled '24 - APPLICATION RULES' shows 'Remaining number of rules that can be created : 24'. Below this is a table with columns for 'Port' and 'Traffic Type'. The table has two rows, each with a checkbox, an 'Application Name' dropdown, and two port fields (Trigger and Firewall) with 'Any' selected in the Traffic Type dropdown.

			Port	Traffic Type
<input type="checkbox"/>	<< Application Name	Trigger	Any	
		Firewall	Any	
<input type="checkbox"/>	<< Application Name	Trigger	Any	
		Firewall	Any	

**Helpful Hints.**

- Check the **Application name** drop-down menu for a list of pre-defined applications that you can select from. If you select one of the pre-defined applications, click the arrow button next to the drop-down menu to fill out the appropriate fields.

# Access Control

Use MAC (Media Access Control) Filters to allow or deny LAN (Local Area Network) computers by their MAC addresses from accessing the Network. You can either manually add a MAC address or select the MAC address from the list of clients that are currently connected to the Broadband Router.

**Configure MAC Filter:** Select Disable MAC filters, allow MAC addresses listed below, or deny MAC addresses listed below.

**MAC Address:** Enter the MAC address you would like to filter. To find the MAC address on a computer, please refer to the Networking Basics section in this manual.

**DHCP Client:** Select a DHCP client from the drop-down menu and click << to copy that MAC Address.

Product Page : DIR-100 Hardware Version : Firmware Version : v4.00

ACCESS CONTROL  
WEBSITE FILTER  
FIREWALL SETTINGS  
ADVANCED NETWORK  
ROUTING  
LOGOUT

**MAC FILTERING**

The MAC (Media Access Controller) Address filter option is used to control network access based on the MAC Address of the network adapter. A MAC address is a unique ID assigned by the manufacturer of the network adapter. This feature can be configured to ALLOW or DENY network/Internet access.

Save Settings Don't Save Settings

**24 - MAC FILTERING RULES**

Configure MAC Filtering below:  
Turn MAC Filtering ON and ALLOW computers listed to access the network

Remaining number of rules that can be created : 24

	MAC Address	DHCP Client List	Schedule	
<input type="checkbox"/>	<input type="text"/>	<< Computer Name	Always on	Add New
<input type="checkbox"/>	<input type="text"/>	<< Computer Name	Always on	Add New

**Helpful Hints.**

- Create a list of MAC addresses that you would either like to allow or deny access to your network.
- Computers that have obtained an IP address from the router's DHCP server will be in the DHCP Client List. Select a device from the drop-down menu and click the arrow to add that device's MAC to the list.
- Use the check box on the left to either enable or disable a particular entry.
- Use the **Always On** drop down menu if you have previously defined a schedule in the router. If not, click on the **Add New** button to add one.

# Website Filter

URL blocking is used to deny LAN computers from accessing specific web sites by the URL or domain. A URL is a specially formatted text string that defines a location on the Internet. If any part of the URL contains the blocked word, the site will not be accessible and the web page will not display. To use this feature, enter the text string to be blocked and click **Save Settings**. The text to be blocked will appear in the list. To delete the text, just highlight it and click **Delete** to remove the text.

**Configure Website Filter:** Select **Turn website filtering off**, **Turn website filtering on and allow access**, or **Turn website filtering on and deny access**.

**Website URL:** Enter the keywords or URLs that you want to block (or allow). Any URL with the keyword in it will be blocked.

The screenshot displays the D-Link DIR-100 web interface for configuring website filters. The main content area is titled 'WEBSITE FILTER RULES' and includes a description of the feature and two buttons: 'Save Settings' and 'Don't Save Settings'. Below this, a section titled '40 - WEBSITE FILTER RULES' shows a configuration dropdown set to 'Turn Website Filter ON and ALLOW computers access to ONLY these sites'. A status message indicates 'Remaining number of rules that can be created : 40'. A table with two columns, 'Website URL' and 'Schedule', contains two empty rows. Each row has a checkbox, a text input field, a dropdown menu set to 'Always on', and an 'Add New' button. On the right side, a 'Helpful Hints' section provides instructions on creating a list of websites and using keywords for blocking.

# Firewall & DMZ

This section will allow you to setup a DMZ host.

If you have a client PC that cannot run Internet applications properly from behind the DIR-100, then you can set the client up for unrestricted Internet access. It allows a computer to be exposed to the Internet. This feature is useful for gaming purposes. Enter the IP address of the internal computer that will be the DMZ host. Adding a client to the DMZ (Demilitarized Zone) may expose your local network to a variety of security risks, so only use this option as a last resort.

**Enable DMZ** Check this box to enable DMZ.

**Host:**

**DMZ IP Address:** Enter the IP address of the computer you would like to open all ports to.

**D-Link**

DIR-100 //

**FIREWALL & DMZ SETTINGS**

Firewall rules can be used to allow or deny traffic passing through the router. You can specify a single port by utilizing the input box on the top or a range of ports by utilizing both input boxes.

DMZ means "Demilitarized Zone". DMZ allows computers behind the router firewall to be accessible to Internet traffic. Typically, your DMZ would contain Web servers, FTP servers and others.

Save Settings Don't Save Settings

**FIREWALL SETTING**

Enable DoS Prevention :

**ANTI-SPOOF CHECKING**

Enable/Disable Anti-Spoof Checking :

**DMZ HOST**

The DMZ(Demilitarized Zone)option provides you with an option to set a single computer on your network outside of the router.If you have a computer that cannot run Internet applications successfully from behind the router,then you can place the computer into the DMZ for unrestricted Internet access.

**Note:** Putting a computer in the DMZ may expose that computer to a variety of security risks.Use of this option is only recommended as a last resort.

Enable DMZ Host :

DMZ IP Address :  << Computer Name

**APPLICATION LAYER GATEWAY**

Enable RTSP

**50 - FIREWALL RULES**

Remaining number of rules that can be created : 50

Name	Source	Interface	IP Address	Protocol	Schedule
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	All <input type="text"/>	<input type="text"/>

**Helpful Hints.**

- DMZ:** Only enable the DMZ option as a last resort. If you are having trouble using an application from a computer behind the router, first try opening ports associated with the application in the Advanced Port Forwarding section.
- Firewall:** Firewall Rules are an advanced feature used to deny or allow traffic from passing through the device. You can create detailed rules for the device.Please refer to the manual for more details and examples.

# Advanced Network Settings

**UPnP Settings:** To use the Universal Plug and Play (UPnP™) feature click on **Enabled**. UPnP provides compatibility with networking equipment, software and peripherals.

**WAN Ping:** Unchecking the box will not allow the DIR-100 to respond to pings. Blocking the Ping may provide some extra security from hackers. Check the box to allow the WAN port to be “pinged”.

**WAN select to 10/100 Mbps:** You may set the port speed of the WAN port to 10Mbps, 100Mbps, or auto. Some older cable or DSL modems may require you to set the port speed to 10Mbps.

**Multicast streams:** Check the box to allow multicast traffic to pass through the router from the Internet.

**UPNP**

Universal Plug and Play (UPnP) supports peer-to-peer Plug and Play functionality for network devices.

Enable UPnP:

**WAN PING**

If you enable this feature, the WAN port of your router will respond to ping requests from the Internet that are sent to the WAN IP Address.

Enable WAN Ping Respond:

**WAN PORT SPEED**

WAN Port Speed: 10/100Mbps Auto

**MULTICAST STREAMS**

Enable Multicast Streams:

Save Settings Don't Save Settings

**WIRED**

**Helpful Hints.**

- For added security, it is recommended that you disable the **WAN Ping Respond** option. Ping is often used by malicious Internet users to locate active networks or PCs.

# Routing

This option allows you to define routes to defined destinations.

**Enable:** Tick this checkbox to enable or disable fixed routes to defined destinations.

**Interface:** Use the drop-down menu to choose the WAN or WAN (Physical Port) Interface the IP packet must use to transit out of the Router.

**Destination:** The IP address of the packets that will take this route.

**Subnet Mask:** The subnet of the IP address of the packets that will take this route.

**Gateway:** Species the next hop to be taken if this route is used.

**D-Link**

DIR-100 // SETUP ADVANCED TOOLS STATUS HELP

**ROUTING:**  
The Routing option allows you to define fixed routes to defined destinations.  
Save Settings Don't Save Settings

**25 - STATIC ROUTING**  
Remaining number of rules that can be created : 25

	Interface	Destination	Subnet Mask	Gateway
<input type="checkbox"/>	WAN(172.17.5.95) ▼			
<input type="checkbox"/>	WAN(172.17.5.95) ▼			
<input type="checkbox"/>	WAN(172.17.5.95) ▼			
<input type="checkbox"/>	WAN(172.17.5.95) ▼			
<input type="checkbox"/>	WAN(172.17.5.95) ▼			
<input type="checkbox"/>	WAN(172.17.5.95) ▼			
<input type="checkbox"/>	WAN(172.17.5.95) ▼			
<input type="checkbox"/>	WAN(172.17.5.95) ▼			

**Helpful Hints.**

- Enable: Specifies whether the entry will be enabled or disabled.
- interface: Specifies the interface -- WAN or WAN Physical -- that the IP packet must use to transit out of the router, when this route is used.
- Destination IP: The IP address of packets that will take this route.
- Subnet Mask: One bits in the mask specify which bits of the IP address must match.
- Gateway: Specifies the next hop to be taken if this route is used. A gateway of 0.0.0.0 implies there is no next hop, and the IP address matched is directly connected to the router on the interface specified: WAN or WAN Physical.

# MAINTENANCE

## Device Administration

Device Administration allows the device to be configured through the WAN (Wide Area Network) port from the Internet using a web browser. A username and password is still required to access the router's management interface.

**IP Address:** The remote computer on the WAN network that is allowed to access DIR-100.

**Port:** Select the port which will be used to access the DIR-100.

**Example:** `http://x.x.x.x:8080` whereas x.x.x.x is the WAN IP address of the DIR-100 and 8080 is the port used for the Web-Management interface.

The screenshot displays the D-Link DIR-100 web management interface. The top navigation bar includes the D-Link logo and tabs for SETUP, ADVANCED, TOOLS, STATUS, and HELP. The left sidebar lists various configuration options: ADMIN, TIME, LOG SETTINGS, EMAIL SETTINGS, SAVE AND RESTORE, FIRMWARE UPDATE, DDNS SETTING, SYSTEM CHECK, SCHEDULES, and LOGOUT. The main content area is titled "ADMINISTRATOR SETTINGS" and contains the following sections:

- ADMINISTRATOR SETTINGS:** A message states, "There is no password for this router by default. To help secure your network, we recommend that you should choose a new password." Below this message are two buttons: "Save Settings" and "Don't Save Settings".
- ADMINISTRATOR (THE DEFAULT LOGIN NAME IS "admin"):** A section for password configuration. It prompts the user to "Please enter the same password into both boxes, for confirmation." It includes two input fields: "New Password:" and "Verify Password:", both masked with dots.
- REMOTE MANAGEMENT:** A section with a checkbox for "Enable Remote Management:" and a dropdown menu for "Port:" currently set to "8080".

On the right side of the interface, there is a "Helpful Hints." section with the following text:

- For security reasons, it is recommended that you change the Password for the Administrator. Be sure to write down the Passwords to avoid having to reset the router in the event that they are forgotten.
- When enabling Remote Management, anyone can have access to your router.

# Save and Restore

**Save Settings to Local Hard Drive:** Use this option to save the current router configuration settings to a file on the hard disk of the computer you are using. First, click the Save button. You will then see a file dialog, where you can select a location and file name for the settings.

**Load Settings from Local Hard Drive:** Use this option to load previously saved router configuration settings. First, use the Browse control to find a previously save file of configuration settings. Then, click the Load button to transfer those settings to the router.

**Restore to Factory Default Settings:** This option will restore all configuration settings back to the settings that were in effect at the time the router was shipped from the factory. Any settings that have not been saved will be lost, including any rules that you have created. If you want to save the current router configuration settings, use the Save button above.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The 'TOOLS' menu is active, displaying the 'SAVE AND RESTORE SETTINGS' section. This section contains a description: 'Once the router is configured you can save the configuration settings to a configuration file on your hard drive. You also have the option to load configuration settings, or restore the factory default settings.' Below this are four options with buttons: 'Save settings to local hard drive: Save', 'Load settings from local hard drive: [Browse...] Upload Settings', 'Restore to factory default settings: Restore Device', and 'Reboot device: Reboot'. A 'Helpful Hints' sidebar on the right provides additional context: 'Once your router is configured they way you want it, you can save these settings to a configuration file that can later be loaded in the event that the router's default settings are restored. To do this, click the Save button next to where it says Save Settings to Local Hard Drive.'

# Firmware Update

You can upgrade the firmware of the Router here. Make sure the firmware you want to use is on the local hard drive of the computer. Click on **Browse** to locate the firmware file to be used for the update. Please check the D-Link support site for firmware updates at <http://support.dlink.com>. You can download firmware upgrades to your hard drive from the D-Link support site.

**Firmware Upgrade:** Click on the link in this screen to find out if there is an updated firmware; if so, download the new firmware to your hard drive.

**Browse:** After you have downloaded the new firmware, click Browse in this window to locate the firmware update on your hard drive. Click **Save Settings** to complete the firmware upgrade.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes tabs for SETUP, ADVANCED, TOOLS, STATUS, and HELP. The left sidebar lists various settings options, with FIRMWARE UPDATE selected. The main content area is divided into three sections:

- FIRMWARE UPDATE:** Contains a message: "There may be new firmware for your DIR-100 to improve functionality and performance." Below this, it instructs the user to locate the upgrade file on the local hard drive and click the **Upload** button.
- FIRMWARE INFORMATION:** Displays the current firmware version as v4.00 and the firmware date as Fri Jan 22 17:06:19 2010. It includes a "Check Online Now for Latest Firmware Version" link and a "Check Now" button.
- FIRMWARE UPGRADE:** Features a red warning note: "Note: Some firmware upgrades reset the configuration options to the factory defaults. Before performing an upgrade, be sure to save the current configuration." Below the note, it states: "To upgrade the firmware, your PC must have a wired connection to the router. Enter the name of the firmware upgrade file, and click on the Upload button." This section includes an "Update:" label, a text input field, a "浏览..." (Browse) button, and an "Upload" button.

The right sidebar contains "Helpful Hints," which notes that firmware updates are released periodically to improve functionality and that users should check the support site for updates.

# Dynamic DNS

**Enabled:** Enable this option only if you have purchased your own domain name and registered with a dynamic DNS service provider. The following parameters are active when the option is enabled.

**Server Address:** Select a dynamic DNS service provider from the pull-down list.

**Host Name:** Enter your entire host name; for example: myhost.mydomain.net.

**Username:** Enter the username or key provided by your service provider. If the Dynamic DNS provider supplies only a key, enter that key in all three fields.

**Password:** Enter the password or key provided by your service provider. If the Dynamic DNS provider supplies only a key, enter that key in all three fields.

The screenshot displays the D-Link DIR-100 web interface for Dynamic DNS configuration. The page is titled 'D-Link' and 'DIR-100'. The navigation menu includes 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The 'DYNAMIC DNS' section is active, showing the following content:

**DYNAMIC DNS**

The Dynamic DNS feature allows you to host a server (Web, FTP, Game Server, etc...) using a domain name that you have purchased (www.whateveryournameis.com) with your dynamically assigned IP address. Most broadband Internet Service Providers assign dynamic (changing) IP addresses. Using a DDNS service provider, your friends can enter your host name to connect to your game server no matter what your IP address is.

[Sign up for D-Link's Free DDNS service at www.DLinkDDNS.com.](http://www.DLinkDDNS.com)

Buttons: Save Settings, Don't Save Settings

**DYNAMIC DNS SETTINGS**

Enable DDNS:

Server Address: DynDns.org (Free) [v]

Host Name: [text input]

Username: [text input]

Password: [text input]

DDNS Account Testing

**Helpful Hints.**

- To use this feature, you must first have a Dynamic DNS account from one of the providers in the drop down menu.

# System Check

**Virtual Cable Tester (VCT)** VCT is an advanced feature that integrates a LAN cable tester on every Ethernet port on the router. Through the graphical user interface (GUI), VCT can be used to remotely diagnose and report cable faults such as opens, shorts, swaps, and impedance mismatch. This feature significantly reduces service calls and returns by allowing users to easily troubleshoot their cable connections.

**Ping Test:** The Ping Test is used to send Ping packets to test if a computer is on the Internet. Enter the IP Address that you wish to Ping, and click **Ping**.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes tabs for SETUP, ADVANCED, TOOLS, STATUS, and HELP. The left sidebar contains a menu with options like ADMIN, TIME, LOG SETTINGS, EMAIL SETTINGS, SAVE AND RESTORE, FIRMWARE UPDATE, DDNS SETTING, SYSTEM CHECK, SCHEDULES, and LOGOUT. The main content area is titled 'SYSTEM CHECK' and contains the following sections:

**SYSTEM CHECK**  
The System Check tool allows you to verify the physical connectivity on both the LAN and WAN interfaces. The Ping Test tool can be used to verify the status of the Internet.

**VCT INFO**

Port	Link Status	
WAN		100Mbps FULL Duplex
LAN1		100Mbps FULL Duplex
LAN2		Disconnected
LAN3		Disconnected
LAN4		Disconnected

**PING TEST**  
Ping Test allows you to test whether a computer is on the Internet by sending "Ping" packets.

Host Name or IP Address:

**PING RESULT**

**Helpful Hints.**

- "Ping" checks whether a computer on the Internet is running and responding. Enter either the IP address of the target computer or enter its fully qualified domain name.

# Schedules

**Name:** Give the schedule a name that is meaningful to you, such as “Weekday Rule”.

**Day(s):** Place a checkmark in the boxes for the desired days, or select the All Week radio button to schedule all seven days of the week.

**All Day - 24hrs:** Select this option if you want this schedule in effect all day for the selected day(s).

**Start Time:** If you don't use the All Day option, then enter the time here. The start time is entered in two fields. The first box is for the hour and the second box is for the minute. E-mail events are normally triggered only by the start time.

**End Time:** The end time is entered in the same format as the start time. The hour in the first box and the minutes in the second box. The end time is used for most other rules, but is not normally used for e-mail events.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes tabs for SETUP, ADVANCED, TOOLS, STATUS, and HELP. The left sidebar lists menu items: ADMIN, TIME, LOG SETTINGS, EMAIL SETTINGS, SAVE AND RESTORE, FIRMWARE UPDATE, DDNS SETTING, SYSTEM CHECK, SCHEDULES (highlighted), and LOGOUT. The main content area is titled "SCHEDULES" and contains the following sections:

- SCHEDULES:** A text box explaining that the configuration option is used to manage schedule rules for "Access Control", "Firewall Rules" and "Website Filter". Below this are "Save Settings" and "Don't Save Settings" buttons.
- ADD SCHEDULE RULE:** A form with the following fields:
  - Name:** A text input field.
  - Days:** Radio buttons for "All Week" and "Select Day(s)". Under "Select Day(s)", there are checkboxes for Sun, Mon, Tue, Wed, Thu, Fri, and Sat.
  - All Day - 24 hrs:** A checkbox.
  - Start Time:** Two input boxes for hour and minute, followed by "(hour:minute)".
  - End Time:** Two input boxes for hour and minute, followed by "(hour:minute)".
- SCHEDULE RULES LIST:** A table with columns for Name, Days, and Time Frame.

On the right side, there is a "Helpful Hints" sidebar with the following text:

- Schedules are used with a number of other features to define when those features are in effect.
- Give each schedule a name that is meaningful to you. For example, a schedule for Monday through Friday from 15:00 to 21:00, might be called "After School".
- Click **Save settings** to add a completed schedule to the list below.
- Click the **Edit** icon to change an existing schedule.
- Click the **Delete** icon to permanently delete a schedule.

# Log Settings

**Save Log file:** Save log file to local hard drive.

**Syslog Server:** click the checkbox to save the log in the log server in the LAN side.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The left sidebar lists various configuration options: ADMIN, TIME, LOG SETTINGS (highlighted), EMAIL SETTINGS, SAVE AND RESTORE, FIRMWARE UPDATE, DDNS SETTING, SYSTEM CHECK, SCHEDULES, and LOGOUT. The main content area is titled 'LOG SETTINGS' and contains the following sections:

- LOG SETTINGS:** A text box stating 'Logs can be saved to local hard drive or sending to log server' with two buttons: 'Save Settings' and 'Don't Save Settings'.
- SAVE LOG FILE:** A text box with the label 'Save log file to local hard drive' and a 'Save' button.
- SYSLOG SERVER:** A section with a checkbox for 'Enable logging to syslog server:' (unchecked), a text input for 'Syslog server IP address:' (containing '0.0.0.0'), a '<<' button, and a dropdown menu for 'Computer Name'.

On the right side, under 'Helpful Hints.', there is a note: 'Click on the Save button to save log file to local hard drive which can later send to the network administrator for troubleshooting. You can also select send the log to Syslog Server'.

# Status

## Device Info

This window displays the current information for the DIR-100. It will display the LAN, WAN, and Wireless information.

If your WAN connection is set up for a Dynamic IP address then a DHCP Release button and a DHCP Renew button will be displayed. Use DHCP Release to disconnect from your ISP and use DHCP Renew to connect to your ISP. If your WAN connection is set up for PPPoE, a Connect button and a Disconnect button will be displayed. Use Disconnect to drop the PPPoE connection and use Connect to establish the PP

**LAN:** Displays the MAC address and the private (local) IP settings for the router.

**WAN:** Displays the MAC address and the public IP settings for the router.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes 'DIR-100', 'SETUP', 'ADVANCED', 'TOOLS', 'STATUS', and 'HELP'. The 'STATUS' tab is selected, and the 'DEVICE INFO' sub-tab is active. The main content area is divided into three sections: 'DEVICE INFORMATION', 'GENERAL', and 'WAN'. The 'DEVICE INFORMATION' section shows the firmware version as 4.00, dated Fri Jan 22 17:06:19 2010. The 'GENERAL' section shows the current time as 2010/2/8 19:08:46 and the firmware version as 4.00, dated Fri Jan 22 17:06:19 2010. The 'WAN' section shows the connection type as Dynamic IP, cable status as 100Mbps FULL Duplex, network status as Connected, connection up time as 02:17:25, MAC address as 00:32:10:00:AD:02, and connection type as Dynamic IP Connected. There are buttons for 'DHCP Renew' and 'DHCP Release'.

DIR-100	SETUP	ADVANCED	TOOLS	STATUS	HELP
DEVICE INFO	<b>DEVICE INFORMATION</b>				Helpful Hints. • All of your LAN and WAN connection details are displayed here.
LOG	All of your Internet and network connection details are displayed on this page. The firmware version is also displayed here.

WAN	245448 Packets	118996668 Packets
LAN	284303883 Packets	302799668 Packets

**Helpful Hints.**  
• This is a summary of the number of packets that have passed between the WAN and the LAN since the router was last initialized.

## Active Session

This window displays the Source and Destination packets passing through DIR-100. To refresh the window, click the **Refresh** button.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes tabs for SETUP, ADVANCED, TOOLS, STATUS, and HELP. The left sidebar contains links for DEVICE INFO, LOG, STATISTICS, ACTIVE SESSION, ROUTING TABLE, and LOGOUT. The main content area is titled "ACTIVE SESSION" and includes a "Refresh" button. Below this, there is a section for "NAPT SESSION" showing statistics: TCP Session: 11, UDP Session: 0, and Total: 11. At the bottom, there is a table for "NAPT ACTIVE SESSION" with columns for IP Address, TCP Session, and UDP Session. A "detail" button is next to the first entry.

IP Address	TCP Session	UDP Session
192.168.0.140	11	0

## Routing Table

This window display the routing details configured for your router.

The screenshot shows the D-Link DIR-100 web interface. The top navigation bar includes tabs for SETUP, ADVANCED, TOOLS, STATUS, and HELP. The left sidebar contains links for DEVICE INFO, LOG, STATISTICS, ACTIVE SESSION, ROUTING TABLE, and LOGOUT. The main content area is titled "ROUTING TABLE" and includes a description: "This page displays the routing details configured for your router." Below this, there is a table with columns for Dest IP, Subnet Mask, Gateway, and Interface.

Dest IP	Subnet Mask	Gateway	Interface
0.0.0.0	0.0.0.0	172.17.5.254	LAN
172.17.5.0	255.255.255.0	172.17.5.0	LAN
192.168.0.0	255.255.255.0	192.168.0.0	LAN

# HELP

The screenshot displays the D-Link DIR-100 web interface. At the top left is the D-Link logo. Below it is a navigation bar with tabs for DIR-100, SETUP, ADVANCED, TOOLS, STATUS, and HELP. The HELP tab is selected. On the left side, there is a vertical menu with options: MENU, SETUP, ADVANCED, TOOLS, STATUS, and LOGOUT. The main content area is titled 'SUPPORT MENU' and contains three sections: 'SETUP' with links for Easy Setup, Internet Setup, and LAN Setup; 'ADVANCED' with links for Port Forwarding, Application Rules, Access Control, Website Filter, Firewall Settings, Advanced Network, Routing, and Traffic Control; and 'TOOLS' with links for Admin and Time.

# Troubleshooting

This chapter provides solutions to problems that can occur during the installation and operation of the DIR-100. Read the following descriptions if you are having problems. (The examples below are illustrated in Windows® XP. If you have a different operating system, the screenshots on your computer will look similar to the following examples.)

## 1. Why can't I access the web-based configuration utility?

When entering the IP address of the D-Link router (192.168.0.1 for example), you are not connecting to a website on the Internet or have to be connected to the Internet. The device has the utility built-in to a ROM chip in the device itself. Your computer must be on the same IP subnet to connect to the web-based utility.

- Make sure you have an updated Java-enabled web browser. We recommend the following:
  - Internet Explorer 6.0 or higher
  - Firefox 2.0 or higher
- Verify physical connectivity by checking for solid link lights on the device. If you do not get a solid link light, try using a different cable or connect to a different port on the device if possible. If the computer is turned off, the link light may not be on.
- Disable any internet security software running on the computer. Software firewalls such as Zone Alarm, Black Ice, Sygate, Norton Personal Firewall, and Windows® XP firewall may block access to the configuration pages. Check the help files included with your firewall software for more information on disabling or configuring it.

- Configure your Internet settings:
  - Go to **Start > Settings > Control Panel**. Double-click the **Internet Options** icon. From the **Security** tab, click the button to restore the settings to their defaults.
  - Click the **Connection** tab and set the dial-up option to Never Dial a Connection. Click the LAN Settings button. Make sure nothing is checked. Click **OK**.
  - Go to the **Advanced** tab and click the button to restore these settings to their defaults. Click **OK** three times.
  - Close your web browser (if open) and open it.
- Access the web management. Open your web browser and enter the IP address of your D-Link router in the address bar. This should open the login page for your the web management.
- If you still cannot access the configuration, unplug the power to the router for 10 seconds and plug back in. Wait about 30 seconds and try accessing the configuration. If you have multiple computers, try connecting using a different computer.

## 2. What can I do if I forgot my password?

If you forgot your password, you must reset your router. Unfortunately this process will change all your settings back to the factory defaults.

To reset the router, locate the reset button (hole) on the rear panel of the unit. With the router powered on, use a paperclip to hold the button down for 10 seconds. Release the button and the router will go through its reboot process. Wait about 30 seconds to access the router. The default IP address is 192.168.0.1. When logging in, the username is **admin** and leave the password box empty.

### 3. Why can't I connect to certain sites or send and receive emails when connecting through my router?

If you are having a problem sending or receiving email, or connecting to secure sites such as eBay, banking sites, and Hotmail, we suggest lowering the MTU in increments of ten (Ex. 1492, 1482, 1472, etc).

To find the proper MTU Size, you'll have to do a special ping of the destination you're trying to go to. A destination could be another computer, or a URL.

- Click on **Start** and then click **Run**.
- Windows® 95, 98, and ME users type in **command** (Windows® NT, 2000, and XP users type in **cmd**) and press **Enter** (or click **OK**).
- Once the window opens, you'll need to do a special ping. Use the following syntax:

**ping [url] [-f] [-l] [MTU value]**

Example: **ping yahoo.com -f -l 1472**

```
C:\>ping yahoo.com -f -l 1482
Pinging yahoo.com [66.94.234.13] with 1482 bytes of data:
Packet needs to be fragmented but DF set.

Ping statistics for 66.94.234.13:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

C:\>ping yahoo.com -f -l 1472
Pinging yahoo.com [66.94.234.13] with 1472 bytes of data:
Reply from 66.94.234.13: bytes=1472 time=93ms TTL=52
Reply from 66.94.234.13: bytes=1472 time=109ms TTL=52
Reply from 66.94.234.13: bytes=1472 time=125ms TTL=52
Reply from 66.94.234.13: bytes=1472 time=203ms TTL=52

Ping statistics for 66.94.234.13:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 93ms, Maximum = 203ms, Average = 132ms

C:\>
```

You should start at 1472 and work your way down by 10 each time. Once you get a reply, go up by 2 until you get a fragmented packet. Take that value and add 28 to the value to account for the various TCP/IP headers. For example, lets say that 1452 was the proper value, the actual MTU size would be 1480, which is the optimum for the network we're working with (1452+28=1480).

Once you find your MTU, you can now configure your router with the proper MTU size.

To change the MTU rate on your router follow the steps below:

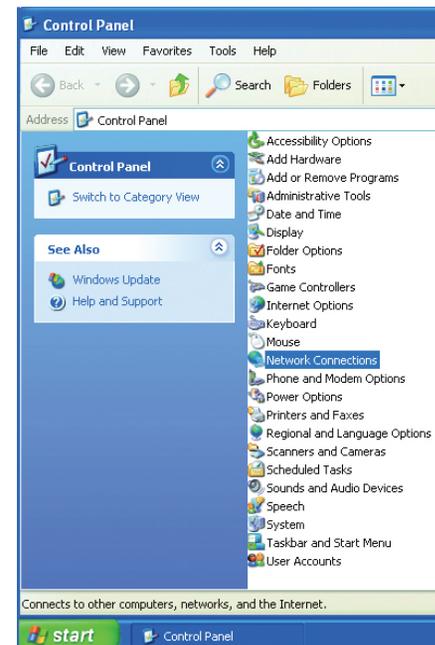

- Open your browser, enter the IP address of your router (192.168.0.1) and click **OK**.
- Enter your username (admin) and password (blank by default). Click **OK** to enter the web configuration page for the device.
- Click on the **INTERNET SETUP** tab and click the **Manual Internet Connection Setup** button.
- To change the MTU enter the number in the MTU field and click the **Apply** button to save your settings.
- Test your email. If changing the MTU does not resolve the problem, continue changing the MTU in increments of ten.

# Assigning a Static IP Address (for Windows® 2000/XP)

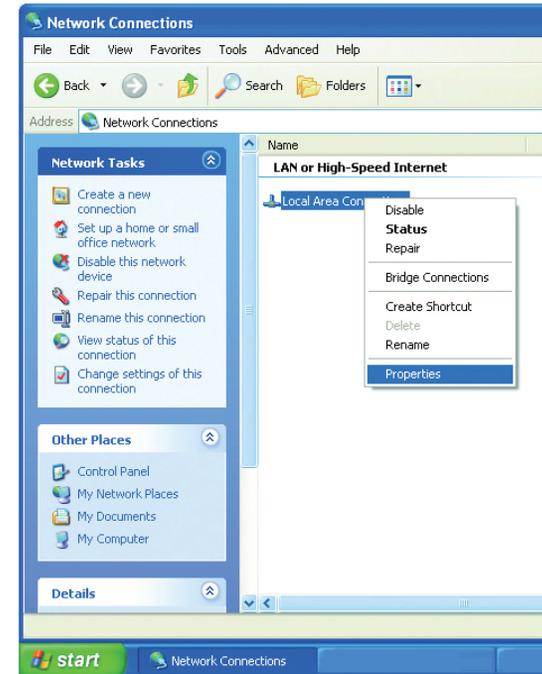

**Note: Broadband Routers will automatically assign IP Addresses to the computers on the network, using DHCP (Dynamic Host Configuration Protocol) technology. If you are using a DHCP-capable Gateway/Router you will not need to assign Static IP Addresses.**

If you are not using a DHCP capable Gateway/Router, or you need to assign a Static IP Address, please follow these instructions:

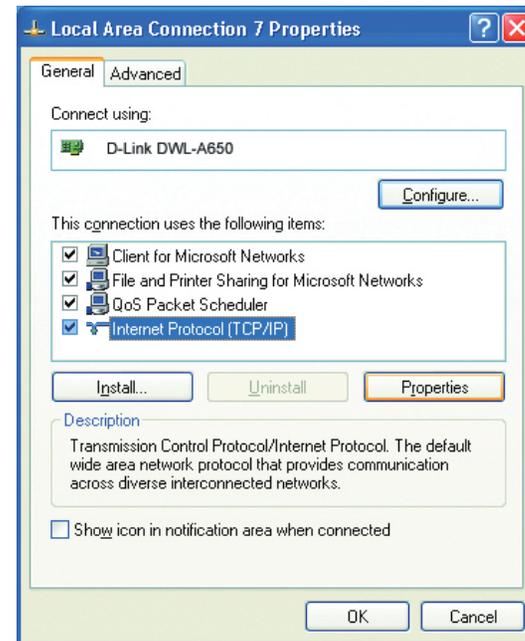

- Go to **Start**
- **Double-click** on **Control Panel**
- **Double-click** on **Network Connections**

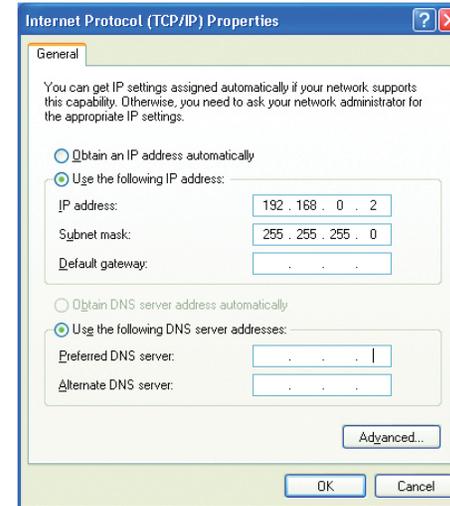

- **Right-click on Local Area Connections.**
- **Double-click Properties**

- Highlight **Internet Protocol(TCP/IP)**
- Click **Properties**
- Select **Use the following IP address** in the **Internet Protocol (TCP/IP) Properties** window (shown below.)

- Input your **IP address and subnet mask.** (The IP Addresses on your network must be within the same range. For example, if one computer has an IP Address of 192.168.0.2, the other computers should have IP Addresses that are sequential, like 192.168.0.3 and 192.168.0.4. The subnet mask must be the same for all the computers on the network.)
- Input your **DNS server addresses.**  
(Note: If you are entering a DNS server, you must enter the IP Address of the Default Gateway.)

The DNS server information will be provided by your ISP (Internet Service Provider.)

# Networking Basics

## Check your IP address

After you install your new D-Link adapter, by default, the TCP/IP settings should be set to obtain an IP address from a DHCP server (i.e. wireless router) automatically. To verify your IP address, please follow the steps below.

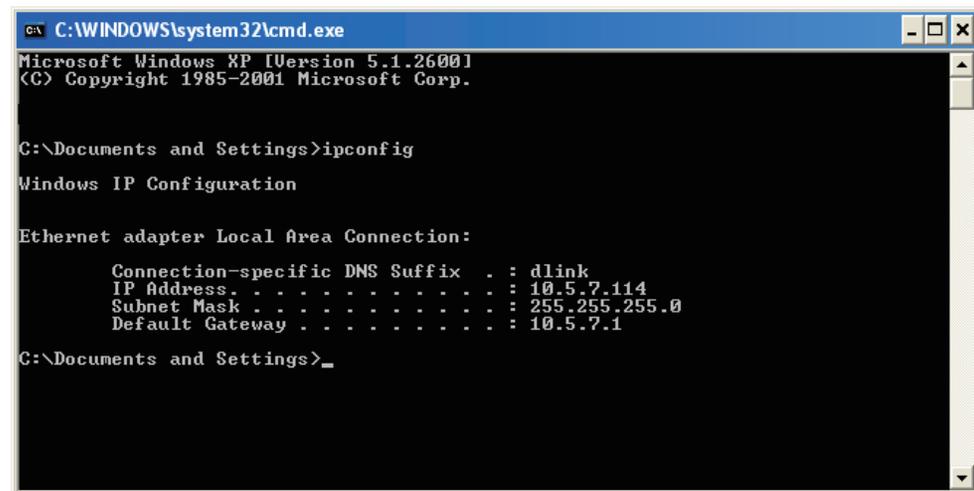

Click on **Start > Run**. In the run box type **cmd** and click **OK**.

At the prompt, type **ipconfig** and press **Enter**.

This will display the IP address, subnet mask, and the default gateway of your adapter.

If the address is 0.0.0.0, check your adapter installation, security settings, and the settings on your router. Some firewall software programs may block a DHCP request on newly installed adapters.

If you are connecting to a wireless network at a hotspot (e.g. hotel, coffee shop, airport), please contact an employee or administrator to verify their wireless network settings.

```
C:\WINDOWS\system32\cmd.exe
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

C:\Documents and Settings>ipconfig

Windows IP Configuration

Ethernet adapter Local Area Connection:

    Connection-specific DNS Suffix  . : dlink
    IP Address . . . . . : 10.5.7.114
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : 10.5.7.1

C:\Documents and Settings>_
```

## Statically Assign an IP address

If you are not using a DHCP capable gateway/router, or you need to assign a static IP address, please follow the steps below:

### Step 1

Windows® XP - Click on **Start > Control Panel > Network Connections**.

Windows® 2000 - From the desktop, right-click **My Network Places > Properties**.

### Step 2

Right-click on the **Local Area Connection** which represents your D-Link network adapter and select **Properties**.

### Step 3

Highlight **Internet Protocol (TCP/IP)** and click **Properties**.

### Step 4

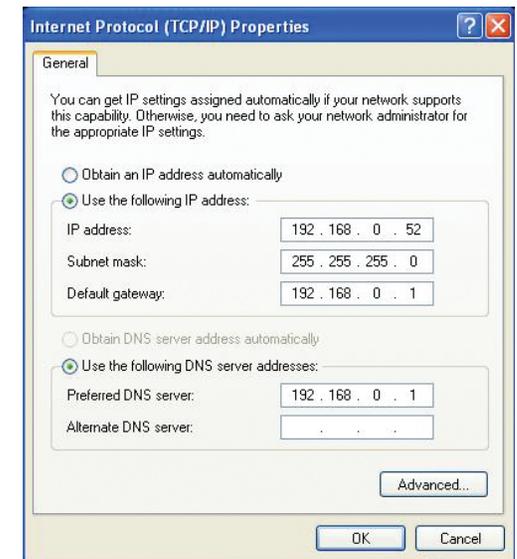

Click **Use the following IP address** and enter an IP address that is on the same subnet as your network or the LAN IP address on your router.

Example: If the router's LAN IP address is 192.168.0.1, make your IP address 192.168.0.X where X is a number between 2 and 99. Make sure that the number you choose is not in use on the network. Set Default Gateway the same as the LAN IP address of your router (192.168.0.1).

Set Primary DNS the same as the LAN IP address of your router (192.168.0.1). The Secondary DNS is not needed or you may enter a DNS server from your ISP.

### Step 5

Click OK twice to save your settings.

# Technical Specifications

## Standards

- IEEE 802.3
- IEEE 802.3u
- IEEE 802.3x

## VPN Pass Through/ Multi-Sessions

- PPTP
- L2TP
- IPSec

## Device Management

- Web-based Internet Explorer v6 or later; Firefox v2.0 or later
- DHCP Server and Client

## Advanced Firewall Features

- NAT with VPN Pass-through (Network Address Translation)
- Access Control
- URL Filtering
- Scheduling

## Operating Temperature

32°F to 129 °F ( 0°C to 40°C)

## Humidity

95% maximum (non-condensing)

## Safety and Emissions

## Warranty

1 Year

# Warranty

Subject to the terms and conditions set forth herein, D-Link Systems, Inc. (“D-Link”) provides this Limited Warranty:

- Only to the person or entity that originally purchased the product from D-Link or its authorized reseller or distributor, and
- Only for products purchased and delivered within the fifty states of the United States, the District of Columbia, U.S. Possessions or Protectorates, U.S. Military Installations, or addresses with an APO or FPO.

## **Limited Warranty:**

D-Link warrants that the hardware portion of the D-Link product described below (“Hardware”) will be free from material defects in workmanship and materials under normal use from the date of original retail purchase of the product, for the period set forth below (“Warranty Period”), except as otherwise stated herein.

- Hardware (excluding power supplies and fans): One (1) year
- Power supplies and fans: One (1) year
- Spare parts and spare kits: Ninety (90) days

The customer’s sole and exclusive remedy and the entire liability of D-Link and its suppliers under this Limited Warranty will be, at D-Link’s option, to repair or replace the defective Hardware during the Warranty Period at no charge to the original owner or to refund the actual purchase price paid. Any repair or replacement will be rendered by D-Link at an Authorized D-Link Service Office. The replacement hardware need not be new or have an identical make, model or part. D-Link may, at its option, replace the defective Hardware or any part thereof with any reconditioned product that D-Link reasonably determines is substantially equivalent (or superior) in all material respects to the defective Hardware. Repaired or replacement hardware will be warranted for the remainder of the original Warranty Period or ninety (90) days, whichever is longer, and is subject to the same limitations and exclusions. If a material defect is incapable of correction, or if D-Link determines that it is not practical to repair or replace the defective Hardware, the actual price paid by the original purchaser for the defective Hardware will be refunded by D-Link upon return to D-Link of the defective Hardware. All Hardware or part thereof that is replaced by D-Link, or for which the purchase price is refunded, shall become the property of D-Link upon replacement or refund.

## **Limited Software Warranty:**

D-Link warrants that the software portion of the product (“Software”) will substantially conform to D-Link’s then current functional specifications for the Software, as set forth in the applicable documentation, from the date of original retail purchase of the Software for a period of ninety (90) days (“Software Warranty Period”), provided that the Software is properly installed on approved hardware and operated as contemplated in its documentation. D-Link further warrants that, during the Software Warranty Period, the magnetic media on which D-Link delivers the Software will be free of physical defects. The customer’s sole and exclusive remedy and the entire liability of D-Link and its suppliers under this Limited Warranty will be, at D-Link’s option, to replace the non-conforming Software (or defective media) with software that substantially

conforms to D-Link's functional specifications for the Software or to refund the portion of the actual purchase price paid that is attributable to the Software. Except as otherwise agreed by DLink in writing, the replacement Software is provided only to the original licensee, and is subject to the terms and conditions of the license granted by D-Link for the Software. Replacement Software will be warranted for the remainder of the original Warranty Period and is subject to the same limitations and exclusions. If a material non-conformance is incapable of correction, or if D-Link determines in its sole discretion that it is not practical to replace the non-conforming Software, the price paid by the original licensee for the non-conforming Software will be refunded by D-Link; provided that the non-conforming Software (and all copies thereof) is first returned to D-Link. The license granted respecting any Software for which a refund is given automatically terminates.

### **Non-Applicability of Warranty:**

The Limited Warranty provided hereunder for Hardware and Software portions of D-Link's products will not be applied to and does not cover any refurbished product and any product purchased through the inventory clearance or liquidation sale or other sales in which D-Link, the sellers, or the liquidators expressly disclaim their warranty obligation pertaining to the product and in that case, the product is being sold "As-Is" without any warranty whatsoever including, without limitation, the Limited Warranty as described herein, notwithstanding anything stated herein to the contrary.

### **Submitting A Claim:**

The customer shall return the product to the original purchase point based on its return policy. In case the return policy period has expired and the product is within warranty, the customer shall submit a claim to D-Link as outlined below:

- The customer must submit with the product as part of the claim a written description of the Hardware defect or Software nonconformance in sufficient detail to allow DLink to confirm the same, along with proof of purchase of the product (such as a copy of the dated purchase invoice for the product) if the product is not registered.
- The customer must obtain a Case ID Number from D-Link Technical Support at 1-877-453-5465, who will attempt to assist the customer in resolving any suspected defects with the product. If the product is considered defective, the customer must obtain a Return Material Authorization ("RMA") number by completing the RMA form and entering the assigned Case ID Number at <https://rma.dlink.com/>.
- After an RMA number is issued, the defective product must be packaged securely in the original or other suitable shipping package to ensure that it will not be damaged in transit, and the RMA number must be prominently marked on the outside of the package. Do not include any manuals or accessories in the shipping package. DLink will only replace the defective portion of the product and will not ship back any accessories.
- The customer is responsible for all in-bound shipping charges to D-Link. No Cash on Delivery ("COD") is allowed. Products sent COD will either be rejected by D-Link or become the property of D-Link. Products shall be fully insured by the customer and shipped to D-Link Systems, Inc., 17595 Mt. Herrmann, Fountain Valley, CA 92708. D-Link will not be held responsible for any packages that are lost in transit to D-Link. The repaired or replaced packages will be shipped to the customer via

UPS Ground or any common carrier selected by D-Link. Return shipping charges shall be prepaid by D-Link if you use an address in the United States, otherwise we will ship the product to you freight collect. Expedited shipping is available upon request and provided shipping charges are prepaid by the customer. D-Link may reject or return any product that is not packaged and shipped in strict compliance with the foregoing requirements, or for which an RMA number is not visible from the outside of the package. The product owner agrees to pay D-Link's reasonable handling and return shipping charges for any product that is not packaged and shipped in accordance with the foregoing requirements, or that is determined by D-Link not to be defective or non-conforming.

### **What Is Not Covered:**

The Limited Warranty provided herein by D-Link does not cover:

Products that, in D-Link's judgment, have been subjected to abuse, accident, alteration, modification, tampering, negligence, misuse, faulty installation, lack of reasonable care, repair or service in any way that is not contemplated in the documentation for the product, or if the model or serial number has been altered, tampered with, defaced or removed; Initial installation, installation and removal of the product for repair, and shipping costs; Operational adjustments covered in the operating manual for the product, and normal maintenance; Damage that occurs in shipment, due to act of God, failures due to power surge, and cosmetic damage; Any hardware, software, firmware or other products or services provided by anyone other than D-Link; and Products that have been purchased from inventory clearance or liquidation sales or other sales in which D-Link, the sellers, or the liquidators expressly disclaim their warranty obligation pertaining to the product.

While necessary maintenance or repairs on your Product can be performed by any company, we recommend that you use only an Authorized D-Link Service Office. Improper or incorrectly performed maintenance or repair voids this Limited Warranty.

### **Disclaimer of Other Warranties:**

EXCEPT FOR THE LIMITED WARRANTY SPECIFIED HEREIN, THE PRODUCT IS PROVIDED "AS-IS" WITHOUT ANY WARRANTY OF ANY KIND WHATSOEVER INCLUDING, WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT.

IF ANY IMPLIED WARRANTY CANNOT BE DISCLAIMED IN ANY TERRITORY WHERE A PRODUCT IS SOLD, THE DURATION OF SUCH IMPLIED WARRANTY SHALL BE LIMITED TO THE DURATION OF THE APPLICABLE WARRANTY PERIOD SET FORTH ABOVE. EXCEPT AS EXPRESSLY COVERED UNDER THE LIMITED WARRANTY PROVIDED HEREIN, THE ENTIRE RISK AS TO THE QUALITY, SELECTION AND PERFORMANCE OF THE PRODUCT IS WITH THE PURCHASER OF THE PRODUCT.

### **Limitation of Liability:**

TO THE MAXIMUM EXTENT PERMITTED BY LAW, D-LINK IS NOT LIABLE UNDER ANY CONTRACT, NEGLIGENCE, STRICT LIABILITY OR OTHER LEGAL OR EQUITABLE THEORY FOR ANY LOSS OF USE OF THE PRODUCT, INCONVENIENCE OR DAMAGES OF ANY CHARACTER, WHETHER DIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL (INCLUDING, BUT NOT LIMITED TO, DAMAGES

FOR LOSS OF GOODWILL, LOSS OF REVENUE OR PROFIT, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, FAILURE OF OTHER EQUIPMENT OR COMPUTER PROGRAMS TO WHICH D-LINK'S PRODUCT IS CONNECTED WITH, LOSS OF INFORMATION OR DATA CONTAINED IN, STORED ON, OR INTEGRATED WITH ANY PRODUCT RETURNED TO D-LINK FOR WARRANTY SERVICE) RESULTING FROM THE USE OF THE PRODUCT, RELATING TO WARRANTY SERVICE, OR ARISING OUT OF ANY BREACH OF THIS LIMITED WARRANTY, EVEN IF D-LINK HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THE SOLE REMEDY FOR A BREACH OF THE FOREGOING LIMITED WARRANTY IS REPAIR, REPLACEMENT OR REFUND OF THE DEFECTIVE OR NONCONFORMING PRODUCT. THE MAXIMUM LIABILITY OF D-LINK UNDER THIS WARRANTY IS LIMITED TO THE PURCHASE PRICE OF THE PRODUCT COVERED BY THE WARRANTY. THE FOREGOING EXPRESS WRITTEN WARRANTIES AND REMEDIES ARE EXCLUSIVE AND ARE IN LIEU OF ANY OTHER WARRANTIES OR REMEDIES, EXPRESS, IMPLIED OR STATUTORY.

**Governing Law:**

This Limited Warranty shall be governed by the laws of the State of California. Some states do not allow exclusion or limitation of incidental or consequential damages, or limitations on how long an implied warranty lasts, so the foregoing limitations and exclusions may not apply. This Limited Warranty provides specific legal rights and you may also have other rights which vary from state to state.

**CE Mark Warning:**

This is a Class B product. In a domestic environment, this product may cause radio interference, in which case the user may be required to take adequate measures.

**FCC Statement:**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communication. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

For detailed warranty information applicable to products purchased outside the United States, please contact the corresponding local D-Link office.

### **Industry Canada Statement**

Operation is subject to the following two conditions:

- 1) this device may not cause interference and
- 2) this device must accept any interference, including interference that may cause undesired operation of the device

This device has been designed to operate with an antenna having a maximum gain of 2dBi.

Antenna having a higher gain is strictly prohibited per regulations of Industry Canada. The required antenna impedance is 50 ohms.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the EIRP is not more than required for successful communication.

### **CSA Statement:**

The Router must be used with the power adapter included with the device. Caution - To reduce the risk of fire, use only No. 26 AWG or larger telecommunication line cord.

### **低功率電波幅性電機管理辦法**

- 第十二條 經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。
- 第十四條 低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信法規定作業之無線電通信。低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。
