

Poste Italiane : Delivering secure network integration

EXECUTIVE SUMMARY

Customer	Poste Italiane
Industry	Public Sector
Location	Italy
Challenge	Switching
Solution	DES-3200

Poste Italiane is the national post and delivery service in Italy, which actively supports more than 12,000 post offices. Given the scale and importance of this project, it was vital that Poste Italiane were fully supported during the implementation of an enhanced system to achieve optimum results.

Challenge

In order to bring the service into the digital age, Fastweb was contracted to build a system connecting all the post offices to the central network. In the consideration phase not only was the switches affordability with a good price point key to the project, but also the security aspects were very important. With a large number of data traveling at any minute, Poste Italiane's attention was focused on security features and on keeping user groups and permissions organized and tidy for optimum results.

Solution

Thanks to the infrastructure Fastweb constructed using D-Link DES-3200 switches, all Poste Italiane services are now integrated, both at local post office level and at a global network level.

Result

For a nationwide organisation like Poste Italiane, entrusted with a lot of personal information, security is paramount. This is aided by the facility to keep user groups and permissions organised and tidy. D-Link's hardware is designed with these priorities in mind and so their products and solution are ideal for this large-scale project, to be successful.
