

## Nota: La funzione SharePort è disponibile solo quando il DIR-505 è configurato come 'router' o in modalità 'Wi-Fi HotSpot' Nota: La funzione SharePort non è disponibile quando DIR-505 è in modalità Repeater

**Passo 1:** Assicurarsi che l'interruttore hardware sul DIR-505 sia in modo '**Ripeater'**. Attendere che il LED diventi verde prima di accedere al router.

Passare alla modalità Repeater

**Passo 2:** Collegare il PC al DIR-505 tramite un cavo Ethernet. Configurare un indirizzo IP statico nel PC per accedere al DIR-505 in modalità Repeater.

Nota: L'indirizzo IP di default del DIR-505 è 192.168.0.1.

# Statically Assign an IP address

If you are not using a DHCP capable gateway/router, or you need to assign a static IP address, please follow the steps below:

### Step 1

Windows® 7 -	Click on Start > Control Panel > Network and Internet > Network and Sharing Center.
Windows Vista® -	Click on Start > Control Panel > Network and Internet > Network and Sharing Center > Manage Network
	Connections.
Windows® XP -	Click on Start > Control Panel > Network Connections.
Windows® 2000 -	From the desktop, right-click My Network Places > Properties.

#### Step 2

Right-click on the Local Area Connection which represents your network adapter and select Properties.

#### Step 3

Highlight Internet Protocol (TCP/IP) and click Properties.

### Step 4

Click **Use the following IP address** and enter an IP address that is on the same subnet as your network or the LAN IP address on your router.

Example: If the router's LAN IP address is 192.168.0.1, make your IP address 192.168.0.X where X is a number between 2 and 99. Make sure that the number you choose is not in use on the network. Set the Default Gateway the same as the LAN IP address of your router (I.E. 192.168.0.1).

Set Primary DNS the same as the LAN IP address of your router (192.168.0.1). The Secondary DNS is not needed or you may enter a DNS server from your ISP.

### Step 5

Click OK twice to save your settings.

su can get P" satings actigned to copability. Difference, sou re e appropriate IP cettings.	l automatically il your network supports edito aik your network administrator for

(i) Use the following DNS saw	maddenner
Preferred DNS cerver	192.169.D.1
Alternate DNS perver:	
	Advanced.

**Passo 3:** Aprire il browser web sul PC, digitare l'indirizzo IP del DIR-505 - <u>http://192.168.0.1</u> e entrare nella pagina di configurazione DIR-505.

La password di default è vuota. Si prega di inserire la password se è stata cambiata. Fare clic **Login**.

Log in to the router:
User Name : Admin 👻
Password :

**Passo 4:** Portarsi su **SETUP> WIRELESS SETUP.** Assicurarsi che la casella **'Enable Wireless'** sia selezionata. Fare clic su **'Site Survey'** per eseguire la scansione della rete wireless del router principale (quella che si desidera ripetere)

## Passo 5: Selezionare il nome della connessione wireless del router principale e fare clic su Connect.

**Passo 6:** La finestra con l'elenco delle connessioni wireless disponibili si chiudera' automaticamente, nella nuova schermata sara' necessario specificare la password della connessione wireless alla quale il DIR si colleghera' (la password andra' inserita in "**Pre-Shared Key**"). Fare clic su **Save Settings** sulla parte superiore. Il DIR-505 si riavvierà.

WIRELESS NETWORK SETTINGS
Enable Wireless : Wireless Mode : Repeater Mode Site Survey Wireless Network Name : dracula (Also called the SSID) Channel Width : Auto 20/40 MHz
WIRELESS SECURITY MODE Security Mode : WPA-Personal
WPA Use WPA or WPA2 mode to achieve a balance of strong security and best compatibility. This mode uses WPA for legacy clients while maintaining higher security with stations that are WPA2 capable. Also the strongest cipher that the client supports will be used. For best security, use WPA2 Only mode. This mode uses AES(CCMP) cipher and legacy stations are not allowed access with WPA security. For maximum compatibility, use WPA Only. This mode uses TKIP cipher. Some gaming and legacy devices work only in this mode. To achieve better wireless performance use WPA2 Only security mode (or in other words AES cipher).
WPA Mode : WPA2 Only  Cipher Type : AES
PRE-SHARED KEY
Enter an 8 to 63 character alphanumeric pass-phrase. For good security it should be of ample length and should not be a commonly known phrase.  Pre-Shared Key:

## Passo 7:

- 1. Tornare alla Passo 2. Rimuovere l'indirizzo ip che statico previamente configurato sul Passo 2.
- 2. Scollegare il cavo Ethernet che collega il PC al DIR-505 e collocarlo quest'ultimo nella posizione desiderata per estendere la copertura wireless.
