

Pocket-size Print Server

The DP-101P+ print server is a compact pocket-sized print server which connects your Ethernet network directly to your printer, wherever it is. It manages the flow of print files from your workstations or file servers to its connected printers, delivering print jobs to high-performance printers much faster than a file server or a PC acting as a print server can. The printer server is equipped with a high-speed parallel printer port, allowing you to share the latest generation of bi-directional laser printers, color ink jets and others. It plugs directly to the back of a parallel printer, which is shared among multiple users and no printer cable is required.

Key Features

- Equipped with a standard 36 pin port that plug directly to the back of any parallel printer
- Equipped with one 10 BASE-T LAN port.
- Multiple protocol support ideal for shared printing in LAN environments
- Bi-directional communication allows to collect information about attached printer's status
- Supports SNMP and MIB2 (RFC 1213)
- Flash Memory For Easy Software Upgrade
- Web Configuration Supported
