<sup>1</sup> Maximum wireless signal rate derived from IEEE Standard 802.11ac (draft), and 802.11n specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead, lower actual data throughput rate. Environmental factors can adversely affect wireless signal range. Combined wireless speeds of up to 750 Mbps achieved when extending 802.11ac wireless networks.
