

How to create the backup file in DWS-3024

1. Install TFTP server
(In the example application we use Tftpd32)
2. Open TFTP server

3. In the web interface DWS-3024, go to "TOOL" button and then "Upload File"

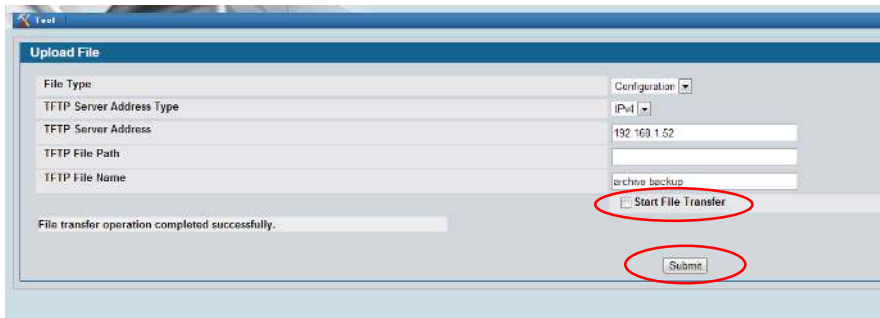

4. In "File Type" check "configuration"
In "TFTP Server Address" check "IPv4" option
In "TFTP Server Address" enter the IP address of the computer (shown in the image above in the TFTP application)

How to create the backup file in DWS-3024

In "TFTP File Path" leave the box blank

In "TFTP File Name" enter a name for the backup file

5. Check the "Start File Transfer" checkbox and then press the "Submit" button to start generating the backup

6. Once the transfer is complete you can find the backup file in the installation path of the TFTP server
